

CONTENTS

1 INTRODUCTION.....	5
2 VORTEX BREAKDOWN.....	6
2.1 Definitions.....	6
2.2 Theories for explanation of vortex breakdown.....	7
2.2.1 <i>Analogy to boundary layer separation</i>	8
2.2.2 <i>Concept of critical state</i>	8
2.2.3 <i>Flow instability</i>	8
2.2.4 <i>Simple criteria for vortex breakdown detection</i>	8
2.3 Methods for computation of the vortex breakdown.....	9
3 PROPER ORTHOGONAL DECOMPOSITION.....	10
4 SWIRLING FLOW IN AN ENCLOSED CYLINDER.....	12
4.1 Introduction.....	12
4.2 Low Reynolds number flows.....	13
4.2.1 <i>Computational modeling</i>	13
4.2.2 <i>Vorticity dynamics</i>	14
4.2.3 <i>Experimental investigation of low Reynolds number flows</i>	15
4.3 Investigation of high Reynolds number flows.....	16
4.3.1 <i>Computational modeling</i>	16
4.3.2 <i>Experimental investigation</i>	18
5 VORTEX ROPE IN HYDRAULIC TURBINE DRAFT TUBE.....	19
5.1 Computational modeling.....	20
5.2 Spectral properties of the draft tube flows.....	22
5.3 Proper orthogonal decomposition of the draft tube flows.....	23
5.3.1 <i>Operating point 90%Q_{BEP} (longitudinal cross-section)</i>	23
5.3.2 <i>Operating point 90%Q_{BEP} (circular cross-section)</i>	24
5.3.3 <i>Operating point 70%Q_{BEP} (longitudinal cross-section)</i>	25
5.3.4 <i>Operating point 70%Q_{BEP} (circular cross-section)</i>	26
6 CONCLUSION.....	27
REFERENCES.....	29
ABSTRAKT.....	34
