

CHAPTER I. INTRODUCTION	1
Scratch hardness	1
Static indentation hardness	3
Dynamic hardness	4
Area of contact	4
CHAPTER II. HARDNESS MEASUREMENTS BY SPHERICAL INDENTERS	6
Brinell hardness	6
Meyer's law	8
Comparison of Brinell and Meyer hardness	11
Validity of Meyer's law	12
Effect of surface roughness	14
'Shallowing' of the indentation	14
'Piling-up' and 'sinking-in'	15
'Strainless' indentation	15
Ultimate tensile strength and Brinell hardness number	16
CHAPTER III. DEFORMATION AND INDENTATION OF IDEAL PLASTIC METALS	19
Stress and strain	19
True stress-strain curves under tension	21
True stress-strain curves under tension and compression	24
Nominal stress-strain curves under tension	26
Plastic deformation under combined stresses	28
Conditions for two-dimensional plastic flow	30
Deformation of an 'ideal' plastic metal by a flat punch	34
Effect of friction	37
Deformation by a flat circular punch	40
CHAPTER IV. DEFORMATION OF METALS BY SPHERICAL INDENTERS. IDEAL PLASTIC METALS	44
Onset of plastic deformation	46
Complete or full plastic deformation	47
Pressure-load characteristic	49
Range of validity of Meyer's law	51

Deformation of the indenter	54
Brinell hardness measurement of very hard metals	55
Effect of surface roughness	61
'Piling-up' and 'sinking-in'	64
'Strainless' indentation	65

CHAPTER V. DEFORMATION OF METALS BY SPHERICAL INDENTERS. METALS WHICH WORK-HARDEN	67
Yield pressure as a function of the size of the indentation	67
Co-ordination of results	69
Yield pressure as a function of the stress-strain characteristic	69
Yield pressure and stress-strain curves for deformed metals	74
Derivation of Meyer's laws	76
The Meyer index and the stress-strain index	78
Brinell hardness and ultimate tensile strength	79

CHAPTER VI. DEFORMATION OF METALS BY SPHERICAL INDENTERS. 'SHALLOWING' AND ELASTIC 'RECOVERY'	84
Cyclic deformation of 'recovered' indentations	84
'Shallowing' and elastic 'recovery'	85
Distribution of stresses	88
Released elastic stresses and the adhesion of metals	90
Processes involved in the Brinell test	93

CHAPTER VII. HARDNESS MEASUREMENTS WITH CONICAL AND PYRAMIDAL INDENTERS	95
Conical indenters	95
Pyramidal indenters	97
Knoop indenter	100
Indentation of an ideal plastic metal by a wedge-shaped indenter	101
Indentation by conical and pyramidal indenters.	103
Indentation of metals which work-harden	105
Pin-cushion and barrel-shaped indentations	106
Vickers hardness number and ultimate tensile strength	107
Rockwell and Monotron hardness	107
The meaning of hardness: the Vickers and Brinell test	112

CHAPTER VIII. DYNAMIC OR REBOUND HARDNESS	115
Indentation produced by impact	115
Four main stages of impact	116

Mean dynamic yield pressure P	117
Effect of variation in the value of P	120
Validity of equations (6) and (10)	121
Shore rebound scleroscope	125
Condition for elastic collisions	126
Coefficient of restitution	129
Time of impact: elastic collisions	130
Time of impact: plastic collisions	132
Electrical measurement of the time of impact	133
Comparison of static and dynamic hardness	137
Meaning of dynamic hardness	138

CHAPTER IX. AREA OF CONTACT BETWEEN SOLIDS	141
Asperities of hemispherical shape	141
Asperities of conical and pyramidal shape	143
Area of real contact	145
Area of real and apparent contact	146
Effect of reducing the load	147
Measurement of the area of contact	148
Contact of flat surfaces	150

APPENDIX I. Brinell hardness	155
II. Meyer hardness	158
III. Vickers hardness	160
IV. Hardness conversion	164
V. Hardness and ultimate tensile strength	166
VI. Some typical hardness values	167

INDEX Name	172
Subject	173
