

IMAGING and DIFFRACTION

Chapter 1

Peter R. Buseck

PRINCIPLES OF TRANSMISSION ELECTRON MICROSCOPY

1.1	Introduction	1
1.2	The TEM: A comparison to optical microscopy	6
1.2.1	General.....	6
1.2.2	The TEM and the petrographic microscope.....	7
1.2.3	Waves and phases—A brief review	9
1.2.4	Origin of contrast	12
1.2.5	The phase-contrast microscope.....	13
1.2.6	Resolution	14
1.3	Electron interactions with matter: A comparison to x-rays	15
1.3.1	General.....	15
1.3.2	Diffraction patterns	16
1.3.3	Quantification of electron microscopy —The computed analogue	18
1.3.4	Elastic vs inelastic scattering—Analytical electron microscopy	19
1.3.5	Transfer function.....	23
1.3.6	Through-focus series of images and focusing.....	24
1.4	Microscopy of thin crystals: Phase vs amplitude contrast	27
1.4.1	General.....	27
1.4.2	The projected potential approximation – kinematical scattering	28
1.4.3	The projected charge-density approximation – dynamical scattering	28
1.4.4	Amplitude contrast.....	29
1.5	Instrumental details	29
1.5.1	Sample stages: Top entry vs side entry.....	29
1.5.2	Aberrations	30
1.5.3	Image recording.....	31
1.6	Samples	32
1.6.1	Samples for electron microscopy	32
1.6.2	Sample preparation	33
1.7	Final thoughts	34
1.7.1	Sign conventions.....	34
1.7.2	General references	34
	Acknowledgments	35
	References	35

Chapter 2

John W. Steeds & J.-P. Morniroli

ELECTRON DIFFRACTION—SAED & CBED

2.1	Introduction	37
2.1.1	General introduction.....	37
2.1.2	A brief history of electron diffraction.....	38
2.1.3	Specimen considerations.....	38
2.1.3.1	<i>Specimen preparation</i>	38

2.1.3.2	<i>Time-dependent changes</i>	39
2.1.3.3	<i>Use of hot and cold stages</i>	39
2.1.4	Different forms of transmission electron diffraction and related terminology.....	39
2.1.5	Electron back-scattered diffraction (EBSD).....	43
2.1.6	Geometrical considerations.....	43
2.1.7	Bravais-lattice determination.....	49
2.1.8	Kinematical and dynamical diffraction theory	49
2.2	Symmetry determination	50
2.2.1	General principles of symmetry determination	50
2.2.2	The diffraction groups.....	51
2.2.3	Examples of point-group determination.....	55
2.2.4	Gjønnes-Moodie lines and space-group determination.....	55
2.2.5	Examples of space-group determination	60
2.2.6	Special cases—polarity, chirality, and modulated structures	69
2.3	Imperfect crystals	72
2.3.1	Point disorder	72
2.3.2	Planar disorder and polytypism	73
2.3.3	Dislocation Burgers vector determination.....	74
2.3.4	Interfacial studies	77
2.4	Higher order Laue zone lines	77
2.4.1	Excess and deficiency lines.....	77
2.4.2	HOLZ line indexing and their pseudo-kinematic character.....	78
2.4.3	Dynamical diffraction theory, HOLZ lines revisited and sub-lattice selection.....	79
2.4.4	<i>Ab initio</i> crystal-structure determination	82
	References	83

Chapter 3

HIGH-RESOLUTION IMAGE SIMULATION AND ANALYSIS

3.1	Introduction	85
3.1.1	Why and when?.....	85
3.1.2	How?.....	87
3.2	Methodology for image matching	87
3.2.1	What is being modelled?	87
3.2.2	No cheating!.....	89
3.3	Computational of diffracted amplitudes	90
3.3.1	Preliminaries.....	90
3.3.2	What is it?.....	91
3.3.3	Multislice.....	92
3.3.4	Bloch waves.....	96
3.4	Imaging	103
3.4.1	Theory.....	103
3.4.2	Computational tricks (and traps)	107
3.5	Looking forward and going backwards	109
	Acknowledgments	111
	References	111

ANALYTICAL ELECTRON MICROSCOPY: X-RAY ANALYSIS

4.1	Introduction.....	113
4.2	Production of x-rays.....	115
	4.2.1 Inelastic scattering	115
4.3	Energy dispersive spectrometers (EDS).....	117
	4.3.1 Integrated EDS system	117
	4.3.2 Types of detectors	119
	4.3.3 TEM/spectrometer systems	119
4.4	TEM/EDS system concerns.....	120
	4.4.1 Spurious sources of radiation	120
	4.4.2 Detector system-related spectrum features	121
4.5	Spectrum analysis	123
	4.5.1 Background subtraction.....	123
	4.5.2 Determination of peak intensities.....	123
4.6	Instrumental conditions.....	124
	4.6.1 Instrument mode	124
4.7	Methods of determination of composition.....	124
	4.7.1 Cliff-Lorimer relation.....	124
	4.7.2 <i>k</i> -values	126
	4.7.3 Standardless analyses	127
	4.7.4 Normalization procedures.....	128
4.8	Experimental constraints.....	129
	4.8.1 Specimen preparation.....	129
	4.8.2 Sample damage.....	129
	4.8.3 Electron channeling.....	132
	4.8.4 Limits of thin film criterion	132
	4.8.5 Limits of spatial resolution.....	133
	4.8.6 Limits of sensitivity.....	133
	4.8.7 Accuracy and precision.....	135
4.9	Applications	136
	4.9.1 Qualitative exploratory analysis	136
	4.9.2 Examples of analyses.....	136
	4.9.2.1 <i>Coexisting muscovite and pyrophyllite</i>	136
	4.9.2.2 <i>Five-amphibole assemblage in blueschist</i>	138
	4.9.2.3 <i>Chlorite and white micas in shales</i>	138
4.10	Concluding remarks.....	140
	Acknowledgments	140
	References.....	140

ELECTRON ENERGY-LOSS SPECTROSCOPY (EELS) AND
ELECTRON CHANNELLING (ALCHEMI)

5.1	Introduction.....	141
5.2	Electron energy-loss spectroscopy (EELS).....	142
	5.2.1 Electron energy-loss processes.....	142
	5.2.1.1 <i>Phonons</i>	142
	5.2.1.2 <i>Plasmons</i>	143
	5.2.1.3 <i>Single-electron excitations</i>	143

	5.2.1.3.1	Valence electrons.....	144
	5.2.1.3.2	Inner-shell electrons.....	144
5.2.2		The electron energy-loss spectrum.....	145
	5.2.2.1	<i>The zero-loss peak</i>	145
	5.2.2.2	<i>The low energy-loss region</i>	146
	5.2.2.3	<i>The high energy-loss region</i>	146
5.2.3		Comparison of EELS to x-ray emission, energy-dispersive spectrometry (EDS).....	147
5.2.4		Instrumentation.....	149
	5.2.4.1	<i>The spectrometer</i>	149
	5.2.4.2	<i>PEELS</i>	151
	5.2.4.3	<i>The microscope</i>	152
5.2.5		Elemental analysis by ionization-loss spectrometry.....	152
	5.2.5.1	<i>Sample considerations</i>	153
		5.2.5.1.1 Specimen thickness.....	153
		5.2.5.1.2 Spatial resolution.....	154
	5.2.5.2	<i>Spectrum accumulation</i>	154
	5.2.5.3	<i>Calibration of the spectrum</i>	155
5.2.6		Quantitative analysis.....	156
	5.2.6.1	<i>Background subtraction</i>	156
	5.2.6.2	<i>Determination of compositions</i>	158
		5.2.6.2.1 Complications.....	158
		5.2.6.2.2 Procedures.....	158
	5.2.6.3	<i>Detection limits</i>	160
5.2.7		Crystal chemistry and structural information.....	161
	5.2.7.1	<i>EXELFS: EXtended Energy-Loss Fine Structure</i>	161
	5.2.7.2	<i>Chemical shifts and ELNES: Energy-Loss Near-Edge fine structure</i>	162
5.2.8		Energy-filtered imaging.....	163
5.3		Electron channelling (ALCHEMI)	165
5.3.1		Principles.....	165
	5.3.1.1	<i>General</i>	165
	5.3.1.2	<i>Experimental restrictions on the observation of channelling effects</i>	169
	5.3.1.3	<i>Axial channelling</i>	171
5.3.2		Site occupancy determination.....	171
	5.3.2.1	<i>Statistical approach</i>	174
	5.3.2.2	<i>Localization</i>	176
	5.3.2.3	<i>EELS-ALCHEMI</i>	177
5.4		EELS and ALCHEMI: Closing thoughts	177
		Acknowledgments	178
		References	179

MINERALOGY and CRYSTALLOGRAPHY

Chapter 6

David R. Veblen

ELECTRON MICROSCOPY APPLIED TO NONSTOICHIOMETRY, POLYSOMATISM, AND REPLACEMENT REACTIONS IN MINERALS

6.1		Introduction: Structural basis for nonstoichiometry and reactions in minerals	181
	6.1.1	What is nonstoichiometry?.....	181
	6.1.2	Point defects.....	182
	6.1.3	Extended defects.....	183

6.1.4	Polysomatic reactions	184
6.2	Imaging point defects	187
6.2.1	Disordered and small clusters of point defects	187
6.2.2	Ordered point defects	187
6.2.3	Short-range ordered point defects	188
6.3	Imaging polysomatic defects	190
6.3.1	Why do we use HRTEM to image polysomatic minerals?	191
6.3.2	Biopyriboles	194
6.3.2.1	<i>Introduction to biopyribole nomenclature and HRTEM</i>	194
6.3.2.2	<i>Interpretation of biopyribole HRTEM images</i>	194
6.3.2.3	<i>Recent HRTEM studies of amphiboles and other hydrous pyriboles</i>	196
6.3.2.3.1	Further observations of chain-width disorder in pyriboles	196
6.3.2.3.2	Amphibole asbestos	197
6.3.2.3.3	Synthetic amphiboles and triple-chain silicates	198
6.3.2.3.4	Short-range ordered polysomes	199
6.3.3	Pyroxenoids	201
6.3.4	Sheet silicates	204
6.3.4.1	<i>Polysomatic basis for mixed layering in sheet silicates</i>	205
6.3.4.2	<i>Interpretation of HRTEM images of mixed-layer sheet silicates</i>	205
6.3.4.3	<i>HRTEM observations of mixed layering</i>	207
6.3.4.4	<i>Modulated layer silicates</i>	208
6.3.5	Olivine and the humite group	211
6.3.5.1	<i>Structural disorder in olivine</i>	211
6.3.5.2	<i>Structural disorder in the humite group</i>	212
6.3.6	Other polysomatic mineral series	213
6.3.7	How common is polysomatic disorder in minerals?	214
6.3.7.1	<i>Pyriboles</i>	215
6.3.7.1.1	Pyroxenes	215
6.3.7.1.2	Amphiboles	215
6.3.7.1.3	Other hydrous pyriboles	215
6.3.7.2	<i>Pyroxenoids</i>	215
6.3.7.3	<i>Sheet silicates</i>	215
6.3.7.4	<i>Olivine and the humite group</i>	216
6.3.7.5	<i>Other polysomatic structures</i>	216
6.3.7.6	<i>Rock-forming minerals not belonging to polysomatic series</i>	216
6.3.7.7	<i>So why do we need HRTEM?</i>	217
6.4	Polysomatic reactions	217
6.4.1	Reactions with little or no volume change: biopyriboles	218
6.4.2	Reactions involving a change in volume: biotite-chlorite	219
6.4.3	Alternative descriptions and AEM of polysomatic reactions: pyroxenoids	220
	Acknowledgments	223

Chapter 7

Alain Baronnet

POLYTYPISM AND STACKING DISORDER

7.1	Introduction	231
7.1.1	Historical background and chapter outline	231
7.1.2	Definitions of polytype structures and their notations	232

7.1.2.1	Definition by Verma and Krishna (1966).....	232
7.1.2.2	Modifications by Bailey et al. (1977) and Guinier et al. (1984).....	232
7.1.2.3	Definition-broadening by Angel (1986) and Zvyagin (1988).....	232
7.1.2.4	Layers and stacking sequences	232
7.1.2.5	The ABC notation for closest-packing	233
7.1.2.6	Ross-Takeda-Wones and Zvyagin notations for micas	235
7.1.3	Polytypism versus polysomatism.....	238
7.1.4	Polytypism and modulated structures arising from site ordering/positional displacements.....	241
7.1.5	Polytypism vs polymorphism	243
7.2	Mineral examples of polytypism	243
7.3	Topology and layer stacking sequences	244
7.3.1	Basic structures	244
7.3.2	Disorder and complex polytypes.....	244
7.3.3	Syntactic coalescence.....	245
7.3.4	The concept of stacking faults.....	245
7.3.4.1	Intrinsic faults.....	245
7.3.4.2	Extrinsic faults.....	245
7.3.4.3	Growth faults	247
7.3.4.4	Deformation faults.....	247
7.3.4.5	Layer displacement faults.....	247
7.3.5	Energetics of stacking faults.....	248
7.3.5.1	Empirical stacking fault energy by Hirth and Lothe (1968) ..	248
7.4	Current theories of polytypism	249
7.4.1	Equilibrium theories	250
7.4.1.1	Jagodzinski's disorder theory.....	250
7.4.1.2	The ANNNI model.....	250
7.4.1.3	The model based on Landau phase-transition theory.....	253
7.4.2	Kinetic theories.....	253
7.4.2.1	The perfect-matrix model of spiral growth	253
7.4.2.2	The faulted-matrix model of spiral growth	255
7.4.2.3	The epitaxial model by Vand and Honoka (1967).....	256
7.4.2.4	The periodic slip mechanism.....	256
7.4.3	Discussion	257
7.5	TEM techniques relevant to polytypism	258
7.5.1	X-ray data vs TEM data.....	258
7.5.2	Specimen preparation techniques	259
7.5.2.1	Surface studies—replica techniques.....	259
7.5.2.2	Bulk studies.....	261
7.5.3	Diffraction techniques	262
7.5.3.1	General diffraction features	262
7.5.3.2	SAED and CBED.....	262
7.5.4	Imaging techniques	264
7.5.4.1	Conventional transmission electron microscopy (CTEM).....	264
7.5.4.2	High resolution transmission electron microscopy (HRTEM)	264
7.5.5	From the HR image to the layer stacking sequence.....	267
7.5.5.1	Structure image and image simulations	267
7.5.5.2	The 2D to 3D problem.....	267
7.6	Layer silicate polytypism: TEM results	268
7.6.1	Micas as prototype layer silicates for growth features.....	268
7.6.2	Growth mechanisms of mica basal faces.....	268
7.6.3	Polytypism and small crystal size.....	270
7.6.3.1	In situ nucleation stacking.....	270
7.6.3.2	Polytypes, stacking faults, and thin crystals	272
7.6.3.3	Ostwald ripening of polytypes	272

7.6.4	Local microstructures and large crystal size	273
7.6.4.1	<i>Homogeneity and description of microstructures</i>	273
7.6.5	Chemical signatures of stacking microstructures.....	275
7.6.5.1	<i>Dedicated analytical electron microscopy (AEM)</i>	275
7.6.5.2	<i>Chemical differences among biotite basic structures</i>	276
7.6.6	Polytype parentage as an indicator of phase transformation mechanisms.....	277
7.6.6.1	<i>Solid-state transformation or dissolution/crystallization</i>	277
7.6.6.2	<i>The biotite-to-chlorite reaction</i>	278
7.6.6.3	<i>The chlorite-to-lizardite reaction</i>	280
7.6.6.4	<i>The orthoamphibole-to-talc reaction</i>	281
7.7	Conclusions	282
	Acknowledgments	282
	References	282

Chapter 8

MINERAL DEFINITION BY HRTEM: PROBLEMS AND OPPORTUNITIES

8.1	Introduction	289
8.2	Mineral definition at the macroscopic scale	289
8.3	Defining minerals using HRTEM	291
8.3.1	Microcrystallographic studies	291
8.3.2	Micropetrographic studies	292
8.4	Chemical disorder examined by HRTEM	293
8.4.1	Ordered superstructures.....	295
8.4.1.1	<i>Sulfides</i>	295
8.4.1.2	<i>Feldspars and feldspathoids</i>	296
8.4.2	Exsolved phases	296
8.4.2.1	<i>Diamond</i>	297
8.4.2.2	<i>Rutile</i>	297
8.4.2.3	<i>Pyriboles</i>	297
8.5	Structural disorder examined by HRTEM	297
8.5.1	Polymorphic intergrowths.....	297
8.5.1.1	<i>TiO₂ polymorphs</i>	298
8.5.1.2	<i>Mg₂SiO₄ polymorphs</i>	298
8.5.1.3	<i>Prehnite</i>	299
8.5.2	Polytypic intergrowths	299
8.5.2.1	<i>Inosilicates</i>	299
8.5.2.2	<i>Phyllosilicates</i>	301
8.5.3	Polysomatic intergrowths.....	301
8.5.3.1	<i>Sulfosalts</i>	302
8.5.3.2	<i>Iron oxyhydroxides</i>	303
8.5.3.3	<i>Orthosilicates</i>	303
8.5.3.4	<i>Inosilicates</i>	303
8.5.3.5	<i>Phyllosilicates</i>	307
8.5.3.5.1	<i>Kaolinitized mica</i>	307
8.5.3.5.2	<i>Biotite/chlorite</i>	308
8.5.3.5.3	<i>Illite/chlorite</i>	308
8.5.3.5.4	<i>Altered feldspar</i>	309
8.5.3.5.5	<i>Illite/smectite</i>	309
8.5.3.5.6	<i>Chlorite/smectite</i>	310
8.5.3.5.7	<i>Serpentines/amphiboles/phyllosilicates</i>	310

	8.5.3.5.8 Carbonaceous chondrite matrix phyllsilicates	310
8.6	Short-range ordered regions in disordered intergrowths	310
8.6.1	New polymorphs	312
8.6.2	New polytypes	312
8.6.3	New polysomes	312
8.6.4	Other microscopic phases	314
8.7	Structure determinations of known minerals by HRTEM	315
8.8	Conclusions	317
8.9	Appendix: Published guidelines for naming minerals	319

Chapter 9

Donald R. Peacor

DIAGENESIS AND LOW-GRADE METAMORPHISM OF SHALES AND SLATES

9.1	Introduction	335
9.2	Clay minerals—Special techniques and problems	335
9.2.1	Specimen preparation	335
9.2.2	Identification of minerals through SAED and 00 <i>l</i> lattice fringes	339
	9.2.2.1 <i>General relations</i>	339
	9.2.2.2 <i>Calculated images</i>	342
9.2.3	Polytypism and mixed-layering	343
9.2.4	Clay separates: {001} sections	345
9.2.5	Specimen damage	347
9.2.6	Chemical analyses of clay minerals	349
	9.2.6.1 <i>General relations</i>	349
	9.2.6.2 <i>Interpretation of analytical data</i>	350
9.3	Dioctahedral phyllosilicates: Illite/smectite	351
9.3.1	Identification of illite, smectite, and mixed-layer illite/smectite	351
	9.3.1.1 <i>General sequence of changes with depth</i>	351
	9.3.1.2 <i>TEM observations of smectite/illite sequences</i>	352
	9.3.1.3 <i>Detection of I/S ordering in TEM images</i>	357
	9.3.1.4 <i>AEM analysis of smectite, illite, and I/S</i>	357
9.3.2	Particle theory vs McEwan crystallites	360
9.3.3	I/S and illite during late diagenesis	362
9.3.4	"Back-reaction" of illite to smectite	363
9.3.5	Summary of prograde changes	363
9.4	Illite and chlorite crystallinity: Late diagenesis through low- grade metamorphism	365
9.4.1	General relations	365
9.4.2	Crystal size	366
9.4.3	Crystal strain	368
9.4.4	Crystal heterogeneity	368
9.4.5	Summary	369
9.5	Prograde changes in trioctahedral phyllosilicates	369
9.5.1	Trioctahedral phyllosilicates in basalt	369
9.5.2	Trioctahedral phyllosilicates in pelites	372

9.6	General trends in diagenesis through low-grade metamorphism of pelites	373
9.6.1	Prograde sequences: Heterogeneity to homogeneity.....	373
9.6.2	Sequences of changes.....	375
9.6.3	General conclusions, conjecture, and some suggestions for future work.....	375

CARBONATES: GROWTH AND ALTERATION MICROSTRUCTURES

10.1	Introduction	381
10.2	Sample-related considerations	382
10.2.1	Sample preparation.....	382
10.2.2	Artifacts from electron-beam irradiation.....	
10.3	Structural aspects	383
10.3.1	Unit cells.....	384
10.3.2	Cation sites.....	385
10.3.3	Diffraction terminology for calcite-derived structures.....	385
10.4	HRTEM considerations for carbonates	385
10.5	Microstructures in low-temperature carbonates	385
10.5.1	Some general considerations.....	385
10.5.2	Dolomite.....	386
10.5.2.1	<i>Ancient calcian dolomite (and calcian ankerite)</i>	387
10.5.2.1.1	Modulated structure.....	387
10.5.2.1.1.1	Orientation.....	388
10.5.2.1.1.2	Growth zoning.....	390
10.5.2.1.1.3	Dislocation microstructures.....	390
10.5.2.1.2	Electron diffraction observations.....	390
10.5.2.1.2.1	c-type reflections.....	390
10.5.2.1.2.2	d-type reflections.....	392
10.5.2.1.3	Relationship between microstructural features.....	394
10.5.2.1.4	Ribbon microstructure.....	394
10.5.2.2	<i>Holocene dolomite</i>	398
10.5.2.3	<i>Stoichiometric dolomite (and ankerite)</i>	399
10.5.2.4	<i>Relation between excess Ca and microstructures</i>	399
10.5.3	Calcite.....	400
10.5.3.1	<i>Modulated structure in calcite</i>	402
10.5.3.2	<i>Ribbon microstructure</i>	402
10.5.3.3	<i>c-type reflections</i>	404
10.5.3.4	<i>Impurity substitution and heterogeneous microstructures in calcite and isostructural carbonates</i>	404
10.5.4	Superstructures in dolomite and calcite.....	404
10.5.4.1	c superstructure.....	404
10.5.4.1.1	Calcian dolomite.....	404
10.5.4.1.2	Calcite.....	405
10.5.4.2	d superstructure.....	407
10.5.5	Orthorhombic carbonates.....	409
10.5.6	Biogenic carbonates.....	409
10.5.6.1	<i>Aragonite</i>	409
10.5.6.2	<i>Calcite</i>	409
10.5.7	Replacement mechanisms.....	411
10.5.8	Second-phase inclusions.....	412

10.5.8.1	<i>Solid inclusions</i>	412
10.5.8.1.1	Carbonate inclusions	412
10.5.8.1.2	Non-carbonate inclusions.....	413
10.5.8.2	<i>Fluid inclusions</i>	413

PETROLOGY — HIGH-TEMPERATURE and DEFORMATION-INDUCED REACTIONS

Chapter 11

Harry W. Green, II

ANALYSIS OF DEFORMATION IN GEOLOGICAL MATERIALS

11.1	Introduction	425
11.2	Defects in crystals and their images	426
11.2.1	Point defects.....	426
11.2.2	Line defects.....	428
11.2.2.1	<i>Dislocation geometry</i>	428
11.2.2.2	<i>Dislocation stress/strain fields</i>	432
11.2.2.3	<i>Dislocation multiplication</i>	432
11.2.2.4	<i>Glide of dislocations</i>	433
11.2.2.5	<i>Climb of dislocations</i>	435
11.2.3	Surface defects	436
11.2.3.1	<i>Stacking faults</i>	436
11.2.3.2	<i>Subgrain boundaries</i>	439
11.2.3.3	<i>Grain boundaries</i>	440
11.2.3.4	<i>Phase boundaries</i>	441
11.3	Mechanisms of flow and characteristic microstructures	441
11.3.1	Cataclasis	441
11.3.2	Dislocation glide and creep	443
11.3.3	Mechanical twinning.....	443
11.3.4	Superplasticity and diffusion creep	443
11.4	Phase transformation under stress	445
	Acknowledgments	452
	References	452

Chapter 12

Gordon L. Nord, Jr.

IMAGING TRANSFORMATION-INDUCED MICROSTRUCTURES

12.1	Introduction	455
12.2	Structural phase transitions, crystal symmetry and microstructure	456

12.3	Types of boundaries	460
12.3.1	Twin domain boundaries	460
12.3.1.1	<i>Twinning by merohedry</i>	460
12.3.1.2	<i>Twinning by pseudo-merohedry</i>	462
12.3.1.3	<i>Tweed textures</i>	462
12.3.1.4	<i>Twin boundary morphology</i>	463
12.3.1.5	<i>Twin boundary mobility</i>	464
12.3.1.6	<i>Twin boundary interactions</i>	464
12.3.2	Antiphase domain boundaries	464
12.3.3	Combination	466
12.4	Method of domain boundary identification in the TEM	466
12.4.1	Visibility criteria for twin domains and boundaries	467
12.4.2	Visibility criteria for antiphase domain boundaries	468
12.5	Transformation-induced microstructures in minerals	469
12.5.1	Twin domains	469
12.5.1.1	<i>Quartz transition</i>	469
12.5.1.2	<i>Ferrian ilmenite, dolomite transition</i>	473
12.5.1.3	<i>Leucite transitions</i>	475
12.5.1.4	<i>Vesuvianite transition</i>	481
12.5.1.5	<i>Cordierite transition</i>	481
12.5.1.6	<i>Feldspar transition</i>	485
12.5.2	Antiphase domains	493
12.5.2.1	<i>Plagioclase transitions</i>	493
12.5.2.2	<i>Pigeonite transition</i>	496
12.5.2.3	<i>Omphacite transition</i>	497
12.5.2.4	<i>Cummingtonite transition</i>	497
12.5.2.5	<i>Scapolite transition</i>	499
12.5.3	Combinations of translation and twin interfaces	499
12.5.3.1	<i>Cristobalite transition</i>	499
12.5.3.2	<i>Coarsening experiments</i>	499
12.6	Some conclusions	500
12.7	Appendix	502
12.7.1	Conventional cells of the three-dimensional Bravais lattices	502
12.7.2	The 32 point groups	503
12.7.3	The abstract point groups	504
	Acknowledgments	505
	References	505
