

Table of Contents

***Introduction* 1**

About This Book	1
Conventions Used in This Book.....	2
What You're Not to Read	2
Foolish Assumptions.....	3
How This Book Is Organized	3
Part I: Setting the Stage: Basic Biochemistry Concepts	3
Part II: The Meat of Biochemistry: Proteins	3
Part III: Carbohydrates, Lipids, Nucleic Acids, and More.....	4
Part IV: Bioenergetics and Pathways	4
Part V: Genetics: Why We Are What We Are	4
Part VI: The Part of Tens.....	4
Icons Used in This Book	4
Where to Go from Here.....	5

Part 1: Setting the Stage: Basic Biochemistry Concepts... 7

Chapter 1: Biochemistry: What You Need to Know and Why 9

Why Biochemistry?	9
What Is Biochemistry and Where Does It Take Place?	10
Types of Living Cells	10
Prokaryotes	11
Eukaryotes	11
Animal Cells and How They Work	12
A Brief Look at Plant Cells	14

Chapter 2: Seems So Basic: Water Chemistry and pH 15

The Fundamentals of H ₂ O.....	15
Let's get wet! The physical properties of water.....	16
Water's most important biochemical role: The solvent.....	18
Hydrogen Ion Concentration: Acids and Bases	20
Achieving equilibrium	20
Understanding the pH scale	21
Calculating pOH	22
Applying the Brønsted-Lowry theory.....	23
Buffers and pH Control	27
Identifying common physiological buffers	27
Calculating a buffer's pH.....	28

Chapter 3: Fun with Carbon: Organic Chemistry.....31

The Role of Carbon in the Study of Life.....	31
It's All in the Numbers: Carbon Bonds	32
When Forces Attract: Bond Strengths	33
Everybody has 'em: Intermolecular forces.....	33
Water-related interactions: Both the lovers and the haters	34
How bond strengths affect physical properties of substances	35
Getting a Reaction out of a Molecule: Functional Groups.....	36
Hydrocarbons.....	36
Functional groups with oxygen and sulfur	37
Functional groups containing nitrogen.....	38
Functional groups containing phosphorus	39
Reactions of functional groups	40
pH and functional groups	42
Same Content, Different Structure: Isomerism	43
Cis-trans isomers	44
Chiral carbons.....	44

Part II: The Meat of Biochemistry: Proteins..... 47

Chapter 4: Amino Acids: The Building Blocks of Protein.....49

General Properties of Amino Acids.....	50
Amino acids are positive and negative: The zwitterion formation.....	50
Protonated? pH and the isoelectric point.....	51
Asymmetry: Chiral amino acids	52
The Magic 20 Amino Acids	53
Nonpolar (hydrophobic) and uncharged amino acids	53
Polar (hydrophilic) and uncharged amino acids.....	55
Acidic amino acids.....	57
Basic amino acids	57
Lest We Forget: Rarer Amino Acids	58
Rudiments of Amino Acid Interactions.....	59
Intermolecular forces: How an amino acid interacts with other molecules	59
Altering interactions by changing the pH.....	61
Combining Amino Acids: How It Works.....	62
The peptide bond and the dipeptide	63
Tripeptide: Adding an amino acid to a dipeptide.....	64

Chapter 5: Protein Structure and Function65

Proteins: Not Just for Dinner.....	65
Primary Structure: The Structure Level All Proteins Have	67
Building a protein: Outlining the process.....	67
Organizing the amino acids	68
Example: The primary structure of insulin.....	69
Secondary Structure: A Structure Level Most Proteins Have	69
The α -helix	70
The β -pleated sheet	71
β -turns and the Ω -loops	72
Tertiary Structure: A Structure Level Many Proteins Have	73
Quaternary Structure: A Structure Level Some Proteins Have.....	74
Dissecting a Protein for Study	75
Separating proteins within a cell and purifying them	75
Digging into the details: Uncovering a protein's amino acid sequence	78

Chapter 6: Enzyme Kinetics: Getting There Faster83

Enzyme Classification: The Best Catalyst for the Job.....	84
Up one, down one: Oxidoreductases	85
You don't belong here: Transferases	86
Water does it again: Hydrolases	86
Taking it apart: Lyases	87
Shuffling the deck: Isomerases.....	87
Putting it together: Ligases.....	88
Enzymes as Catalysts: When Fast Is Not Fast Enough.....	89
All about Kinetics	90
Enzyme assays: Fixed time and kinetics	91
Rate determination: How fast is fast?.....	92
Measuring Enzyme Behavior: The Michaelis-Menten Equation	94
Ideal applications.....	96
Realistic applications	97
Here we go again: Lineweaver-Burk plots.....	98
Enzyme Inhibition: Slowing It Down.....	100
Competitive inhibition	100
Noncompetitive inhibition.....	101
Graphing inhibition.....	101
Enzyme Regulation	102

***Part III: Carbohydrates, Lipids, Nucleic Acids, and More* 105**

Chapter 7: What We Crave: Carbohydrates 107

Properties of Carbohydrates	108
They contain one or more chiral carbons	108
They have multiple chiral centers	109
A Sweet Topic: Monosaccharides	111
The most stable monosaccharide structures:	
Pyranose and furanose forms	111
Chemical properties of monosaccharides	114
Derivatives of monosaccharides	114
The most common monosaccharides	116
The beginning of life: Ribose and deoxyribose	117
Sugars Joining Hands: Oligosaccharides	117
Keeping it simple: Disaccharides	117
Starch and cellulose: Polysaccharides	120
The Aldose Family of Sugars	122

Chapter 8: Lipids and Membranes 125

Lovely Lipids: An Overview	125
Behavior of lipids	126
Fatty acids in lipids	127
A Fatty Subject: Triglycerides	128
Properties and structures of fats	128
Cleaning up: Breaking down a triglyceride	130
No Simpletons Here: Complex Lipids	130
Phosphoglycerides	130
Sphingolipids	132
Sphingophospholipids	133
Membranes: The Bipolar and the Bilayer	133
Crossing the wall: Membrane transport	135
Steroids: Pumping up	137
Prostaglandins, Thromboxanes, and Leukotrienes: Mopping Up	138

Chapter 9: Nucleic Acids and the Code of Life 141

Nucleotides: The Guts of DNA and RNA	141
Reservoir of genetic info: Nitrogen bases	142
The sweet side of life: The sugars	143
The sour side of life: Phosphoric acid	144
Tracing the Process: From Nucleoside to Nucleotide to Nucleic Acid ...	144
First reaction: Nitrogen base + 5-carbon sugar = nucleoside	144
Second reaction: Phosphoric acid + nucleoside = nucleotide	145
Third reaction: Nucleotide becomes nucleic acid	146
A Primer on Nucleic Acids	147
DNA and RNA in the grand scheme of life	148
Nucleic acid structure	149

Chapter 10: Vitamins: Both Simple and Complex153

More than One-a-Day: Basics of Vitamins	154
To B or Not to B: B Complex Vitamins.....	154
Vitamin B ₁ (thiamine).....	154
Vitamin B ₂ (riboflavin)	155
Vitamin B ₃ (niacin).....	157
Vitamin B ₆ (pyridoxine)	158
Biotin	158
Folic acid.....	160
Pantothenic acid	161
The wonders of vitamin B ₁₂	161
Vitamin A	162
Vitamin C	164
Vitamin D	164
Vitamin E.....	167
Vitamin K	167

Chapter 11: Hormones: The Body's Messengers169

Structures of Some Key Hormones	170
Proteins	170
Steroids	171
Amines.....	172
Now and Later: Prohormones	174
Proinsulin.....	174
Angiotensinogen	174
Fight or Flight: Hormone Function	175
Opening the letter: Hormonal action.....	175
Models of hormonal action.....	176

Part IV: Bioenergetics and Pathways 181**Chapter 12: Life and Energy183**

ATP: The Energy Pony Express	183
ATP and free energy	183
ATP as an energy transporter	185
It's Relative: Molecules Related to ATP	188
The nucleoside triphosphate family	188
As easy as 1, 2, 3: AMP, ADP, and ATP	190
Where It All Comes From.....	190

Chapter 13: ATP: The Body's Monetary System193

Metabolism I: Glycolysis	193
Glucose: Where it all starts.....	196
Releasing the power: Energy efficiency	197
Going in reverse: Gluconeogenesis	197
Alcoholic fermentation: We'll drink to that	199
Metabolism II: Citric Acid (Krebs) Cycle	200
Let's get started: Synthesis of acetyl-CoA	203
Three's a crowd: Tricarboxylic acids.....	204
Oxidative decarboxylation	204
Production of succinate and GTP	205
Oxaloacetate regeneration	205
Amino acids as energy sources.....	206
Electron Transport and Oxidative Phosphorylation	208
The electron transport system	208
Oxidative phosphorylation.....	216
Proposed mechanisms	216
ATP production.....	216
Involving the fats: β -oxidation cycle.....	217
Not so heavenly bodies: Ketone bodies.....	219
Investing in the Future: Biosynthesis.....	221
Fatty acids.....	222
Membrane lipids	223
Amino acids	226

Chapter 14: Smelly Biochemistry: Nitrogen in Biological Systems231

Ring in the Nitrogen: Purine.....	231
Biosynthesis of purine	232
How much will it cost?	238
Pyrimidine Synthesis.....	241
First step: Carbamoyl phosphate	241
Next step: Orotate.....	242
Last step: Cytidine	244
Back to the Beginning: Catabolism.....	244
Nucleotide catabolism	245
Amino acid catabolism.....	245
Heme catabolism	246
Process of Elimination: The Urea Cycle.....	247
Amino Acids Once Again	250
Metabolic Disorders.....	251
Gout	251
Lesch-Nyhan syndrome	251
Albinism	251
Alkaptonuria.....	252
Phenylketonuria	252

Part V: Genetics: Why We Are What We Are..... 253

Chapter 15: Photocopying DNA255

Let's Do It Again: Replication	255
DNA polymerases.....	258
The current model of DNA replication.....	259
Mechanisms of DNA repair	262
Mutation: The good, the bad, and the ugly	264
Restriction enzymes	265
Mendel Rolling Over: Recombinant DNA.....	266
Patterns: Determining DNA Sequences.....	267
Getting charged up about gel electrophoresis	267
Determining the base sequence.....	269
The butler did it: Forensic applications.....	270
Genetic Diseases and Other DNA Testing Applications	272
Sickle cell anemia.....	273
Hemochromatosis.....	273
Cystic fibrosis.....	274
Hemophilia.....	274
Tay-Sachs	274

Chapter 16: Transcribe This! RNA Transcription277

Types of RNA.....	277
RNA Polymerase Requirements.....	278
Making RNA: The Basics	279
Promoting transcription of RNA	279
Prokaryotic cells	281
Eukaryotic cells.....	284
Not a Secret Any Longer: The Genetic Code.....	287
Codons	288
Alpha and omega	289
Models of Gene Regulation.....	291
The Jacob-Monod (operon) model.....	291
Regulation of eukaryotic genes	294

Chapter 17: Translation: Protein Synthesis299

Hopefully Not Lost in Translation	299
Why translation is necessary	299
Home, home in the ribosome	300
The Translation Team.....	300
The team captain: rRNA.....	300
Here's the snap: mRNA	301
Carrying the ball: tRNA	302
Charging up the middle: Amino acid activation	304

Hooking Up: Protein Synthesis	306
Activation.....	306
Initiation	307
Elongation	307
Termination	308
The wobble hypothesis.....	308
Variation in Eukaryotic Cells.....	310
Ribosomes	310
Initiator tRNA.....	311
Initiation	311
Elongation and termination.....	312
 Part VI: The Part of Tens.....	313
 Chapter 18: Ten Great Applications of Biochemistry	315
Ames Test	315
Pregnancy Testing.....	315
HIV Testing	316
Breast Cancer Testing.....	316
Prenatal Genetic Testing	316
PKU Screening.....	316
Genetically Modified Foods.....	317
Genetic Engineering	317
Cloning.....	317
Gene-Replacement Therapy	318
 Chapter 19: Ten Biochemistry Careers.....	319
Research Assistant	319
Plant Breeder	320
Quality Control Analyst	320
Clinical Research Associate	320
Technical Writer	320
Biochemical Development Engineer	321
Market Research Analyst.....	321
Patent Attorney.....	321
Pharmaceutical Sales	321
Biostatistician	322
 Index.....	323
