

Table of Contents

Chapter 1: Flexible Fully-Printed Low-Cost Zero-Power Wireless
Chemical Sensor Technologies for Ubiquitous Monitoring 1
Jimmy G.D. Hester and Manos M. Tentzeris

1. Introduction 1

2. Printed, Low-Cost, Flexible, Zero-Power Wireless Systems for
Ubiquitous Monitoring and Sensing 2

 2.1 A Broad Range of Applications 2

 2.1.1 Product Monitoring 2

 2.1.2 Chemical and Biological Hazard Detection 3

 2.1.3 Agricultural Optimization 3

 2.1.4 Environmental Surveillance 4

 2.2 Device Requirements 4

 2.2.1 Wireless Functionality 4

 2.2.2 Energy Autonomy 5

 2.2.3 Printability and Large-Scale Manufacturability ... 5

3. Fully-Printed Chemical/Biological Sensor Technologies for Low-
Cost Flexible Motes 6

 3.1 Gas Sensors 10

 3.2 Liquid-Phase Sensors 13

4. Wireless Interrogation Technologies for Zero-Power RFID and
Wireless Sensing Motes 13

 4.1 Low Power Circuitry Implementations 14

 4.1.1 Typical Passive RFID Systems 14

 4.1.2 Typical Low-Power Backscattering Systems 16

 4.2 Chip-less Technologies 18

 4.2.1 Ultra-Wide Band (UWB) Time-Domain Interrogation
Approaches 19

 4.2.2 Frequency-Domain Resonance Interrogation
Approaches 22

 4.2.3 Van-Atta Reflectarrays 23

5. Conclusion 25

References 26

Chapter 2: Automated Robust Design Optimization of Analog
Circuits for Flexible Electronics 33

Chien-Nan Jimmy Liu, Yen-Lung Chen, and Nguyen Cao Qui

- 1.Introduction34
- 2. Design Issues with Flexible TFTs36
 - 2.1 Mechanical Stress on Flexible TFTs36
 - 2.2 Transistor Aging of Flexible TFTs38
- 3. Increment Sampling for Variation and Lifetime Analysis.....40
 - 3.1 Analysis Flow41
 - 3.2 Incremental Latin Hypercube Sampling42
 - 3.3 Selecting Incremental Samples44
 - 3.4 Experimental Results45
- 4. Simultaneous Optimization with Reliability and Variability48
 - 4.1 Variation-aware Optimization Flow51
 - 4.2 Variation-aware Optimization With Aging Model57
 - 4.3 Experimental Results59
- 5. Conclusion69
- References70

Chapter 3: Inorganic Semiconducting Nanowires for Flexible Electronics73
D. Shakhthivel, C. García Núñez, and R. Dahiya

- 1. Introduction73
- 2. Semiconducting Nanowires75
- 3. NW Synthesis Methods77
 - 3.1 Bottom up-Method77
- 4. Nanowire Transfer Methods82
- 5. Applications88
 - 5.1 Nanowire FETs over Flexible Materials89
 - 5.2 Flexible Sensors and Systems90
- 6. Conclusions91
- References93

Chapter Four: Flexible/Stretchable Piezoelectric Nanofiber Devices101
Yongqing Duan, Yajing Ding, Youhua Wang, Yewang Su YongAn Huang

- 1. Introduction102

2. Experimental Section104

3. Results and Discussion108

4. Conclusion126

References127

Chapter Five: Flexible Silicon Nanoelectronics131
Galo Torres Sevilla and Muhammad Mustafa Hussain

1. Introduction131

2. State-Of-The-Art Flexible Silicon Electronics132

 2.1 Transfer Printing of Silicon Nanoribbons and
 Nanomembranes132

 2.2 Chip-film Technology141

 2.3 Spalling Process147

3. High-performance 3D Nanoelectronics on Flexible
Monocrystalline Silicon156

 3.1. High-Performance 3D FinFET Fabrication158

 3.2. Deterministic Pattern-Based FinFET Release160

 3.3. Results Obtained With Deterministic Pattern-Based
 Release162

 3.4. Soft Back-Etch FinFET Thinning Process167

 3.5. Results Obtained Using the Soft Etch-Back Thinning
 Process169

 3.6. High-Temperature Measurements of Flexible FinFETs
 173

References180

**Chapter Six: Inkjet-Printing of Conductive Tracks on Non-Woven
Flexible Textile Fabrics for Wearable Applications185**
*Kalyan Yoti Mitra, Dana Weise, Monique Helmert, Arvind
Gurusekaran, Reinhard R. Baumann*

1. Introduction186

2. Methodology188

 2.1 Materials and Deposition188

3. Curing and Characterization Methods190

4. Results and Discussion191

 4.1 Optical Characterization191

 4.2 Electrical Characterization196

5. Conclusion	201
References	202

Chapter Seven: Wearable Electronics for Intra-Body Communications	205
<i>Asimina Kiourti</i>	

1. Introduction	206
2. What are Intra-Body Communications?	208
3. Wearables for Intra-Body Communications	212
4. Performance of Intra-Body Communication Systems	215
5. Applications and Future Directions	219
References	223

Chapter Eight: Flexible Pentagonal Monopole Antenna	229
<i>Hussein Q. AL-Fayyadh, Ali I. Hammoodi, Haider M. AlSabbagh, and Hussain Al-Rizzo</i>	

1. Introduction	229
2. Antenna Design	230
3. Antenna Fabrication	232
4. Results and Discussion	232
5. Flexibility Tests	234
6. Conclusion	237

Chapter Nine: Near-Field Communication Wearable Antennas ...	
.....	239
<i>Razi Iqbal</i>	

1. Introduction	240
2. NFC Wearable Antennas	244
2.1 Mutual Inductance in NFC	245
2.2 Parameters for Designing NFC Wearable Antenna ...	
.....	246
3. Conclusion	251
References	252

Chapter Ten: Fiber-Based and Textile-Based Flexible Generators for Wearable Energy Harvesting and Self-Powered Sensing	253
---	-----

Junwen Zhong, Qize Zhong, and Jun Zhou

1. Introduction	253
2. Energy from Human Body	255
3. Piezoelectric Generators	256
3.1. Working Mechanism	256
3.2. ZnO-Based Generators	258
3.3 PVDF Based Generators	260
4. Triboelectric Generators	
4.1. Invention and Working Mechanism	263
4.2. Two Components Structured Textile-Based Flexible Triboelectric Generators	265
4.3. Single Component Structured Textile-Based Flexible Triboelectric Generators	268
5. Electret Generators	271
5.1 Electret and Working Mechanism of Electret Generators	271
5.2 Fiber-Based Electret Generator for Mobile Health	274
5.3 Stretchable Active Fiber-Based Strain Sensor	278
6. Conclusion and Outlook	281
References	282

Chapter Eleven: Power Management in Wearable Body Area Networks	287
<i>Cecilia Lantos, and Haider Raad</i>	

1. Introduction	288
2. Body Area Network Energy Requirements	289
3. Battery Management and Energy Harvesting	291
4. Data Processing at the Sensor Node	292
5. Transmission Networks	294
6. Conclusion	297
References	298
