List of Contributors	xiii
Preface	xix
Part I Impacts on Physical, Chemical, and Biological Processes	1
1 Climate Change Impacts on the Hydrology and Biogeochemistry of Arctic Rivers	3
<i>Robert M. Holmes, Michael T. Coe, Greg J. Fiske, Tatiana Gurtovaya, James W. McClelland, Alexander I. Shiklomanov, Robert G.M. Spencer, Suzanne E. Tank, and Alexander V. Zhulidov</i>	
1.1 Introduction	3
1.2 The pan-Arctic watershed	4
1.3 Observational data—historical to contemporary time series	8
1.4 Projections of future fluxes	16
1.5 Conclusions	19
1.6 Acknowledgments	20
References	20
2 Climate Impacts on Arctic Lake Ecosystems	27
<i>Warwick F. Vincent, Isabelle Laurion, Reinhard Pienitz, and Katey M. Walter Anthony</i>	
2.1 Introduction	27
2.2 Physical impacts of climate change	29
2.3 Biogeochemical impacts of climate change	31
2.4 Biological impacts of climate change	34
2.5 Human impacts of climate change	34
2.6 Conclusions	36
2.7 Acknowledgments	38
References	38

3	Trends in Hydrological and Hydrochemical Processes in Lake Baikal under Conditions of Modern Climate Change	43
	<i>M.N. Shimaraev and V.M. Domysheva</i>	
3.1	Introduction	43
3.2	Air temperature	44
3.3	Surface water temperature (T_w)	45
3.4	Water temperature of the Lake Baikal upper zone	48
3.5	Deep water zone temperature	48
3.6	River inflows to Lake Baikal	51
3.7	Lake Baikal ice regime	51
3.8	Effect of atmospheric circulation on climatic and hydrological processes at Lake Baikal during the present period	53
3.9	Problems of possible hydrological condition changes at Lake Baikal in the twenty-first century are attributed to global change	54
3.10	Nutrient changes in Lake Baikal—silica	55
3.11	Concentration dynamics of phosphate, nitrate and dissolved oxygen in Lake Baikal	62
3.12	Acknowledgements	64
	References	64
4	Hydrological Analysis of the Yellow River Basin, China	67
	<i>Xieyao Ma, Yoshinobu Sato, Takao Yoshikane, Masayuki Hara, Fujio Kimura, and Yoshihiro Fukushima</i>	
4.1	Introduction	67
4.2	Climate and land use in the Yellow River basin	68
4.3	Precipitation numerical experiment	70
4.4	Numerical experiment of river runoff	72
4.5	Hydrological impact due to human-induced land-use changes	73
4.6	Long-term water balance in the Yellow River basin	73
4.7	Water saving effect in the Yellow River basin	75
4.8	Conclusions	77
4.9	Acknowledgements	78
	References	78
5	Water Resources under Climate Change in the Yangtze River Basin	79
	<i>Marco Gemmer, Buda Su, and Tong Jiang</i>	
5.1	Introduction	79
5.2	Observed changes of precipitation and temperature	81
5.3	Observed changes of streamflow and flood/drought indices	83
5.4	Projections	84
5.5	Mitigating the negative effects of climatic change	88
	References	91
6	Biogeochemical Ecosystem Dynamics in Lake Biwa under Anthropogenic Impacts and Global Warming	95
	<i>Mitsuru Sakamoto</i>	
6.1	Introduction	95
6.2	Environmental features of Lake Biwa	96

6.3	Global warming and its effects on the thermal and hydrological regimes in Lake Biwa	96
6.4	Biogeochemical evolution in the pelagic system of Lake Biwa	99
6.5	Effects of hypoxic hypolimnion development on biological and geochemical processes in Lake Biwa	103
6.6	Possible effects of climate change on Lake Biwa and adaptation measures to expected changes	106
	References	108
7	Eutrophication, Warming and Historical Changes of the Plankton Community in Lake Biwa during the Twentieth Century	111
	<i>Narumi K. Tsugeki and Jotaro Urabe</i>	
7.1	Introduction	111
7.2	Factors affecting historical changes in the plankton community	113
7.3	Winter warming and life history changes in <i>Daphnia</i>	123
7.4	Conclusion	125
	References	125
8	Numerical Simulation of Future Overturn and Ecosystem Impacts for Deep Lakes in Japan	131
	<i>Daisuke Kitazawa</i>	
8.1	Introduction	131
8.2	Numerical model	133
8.3	Comparison with observations	138
8.4	Future prediction	140
8.5	Conclusions	142
8.6	Acknowledgements	143
	References	143
9	Model Development to Evaluate the Impacts of Climate Change on Total Phosphorus Concentrations in Lakes	145
	<i>Kohei Yoshiyama</i>	
9.1	Introduction	145
9.2	Model framework	146
9.3	Concluding remarks	152
	References	153
10	Recent Climate-Induced Changes in Freshwaters in Denmark	155
	<i>Erik Jeppesen, Brian Kronvang, Torben B. Jørgensen, Søren E. Larsen, Hans E. Andersen, Martin Søndergaard, Lone Liboriussen, Rikke Bjerring, Liselotte S. Johansson, Dennis Trolle, and Torben L. Lauridsen</i>	
10.1	Introduction	155
10.2	Trends in water flow in streams and diffuse nutrient losses	156
10.3	Trends in stream temperature	157
10.4	Trends in lake temperature	159
10.5	Trends in the formation and duration of the thermocline in lakes	162

10.6	Changes in trophic structure and ecological state	164
10.7	Predictions of the future	167
10.8	Adaptation needed	169
10.9	Acknowledgments	169
	References	169
11	Lake Phytoplankton Responses to Global Climate Changes	173
	<i>Kirsten Olrik, Gertrud Cronberg, and Hel��ne Annadotter</i>	
11.1	Introduction	173
11.2	Changes in phytoplankton of the circumpolar zones	174
11.3	Changes in phytoplankton of the boreal and temperate climatic zones	176
11.4	Changes in phytoplankton assemblies of the semi-arid subtropical climatic zone	190
11.5	Changes in phytoplankton assemblies of the tropical climatic zone	192
11.6	Concluding remarks	195
11.7	Acknowledgements	197
	References	197
12	The Influence of Climate Change on Lake Geneva	201
	<i>Ulrich Lemmin and Adeline Amouroux</i>	
12.1	Introduction	201
12.2	Atmospheric boundary layer temperatures	202
12.3	Lake warming trends	205
12.4	Discussion	212
12.5	Conclusion	215
12.6	Acknowledgements	216
	References	216
13	Climate Change and Wetlands of the Prairie Pothole Region of North America: Effects, Management and Mitigation	219
	<i>Marley J. Waiser</i>	
13.1	Introduction	219
13.2	Climate and its influence on wetlands in the PPR	221
13.3	Wetland hydrology	222
13.4	Linkages between climate and wetland processes	222
13.5	Existing climate change	223
13.6	Predicted climate change and its effects	224
13.7	Mitigation/management of climate change	226
13.8	Action required	228
13.9	What is currently being done?	228
13.10	Acknowledgements	229
	References	229
14	Historic and Likely Future Impacts of Climate Change on Lake Tahoe, California-Nevada, USA	231
	<i>Robert Coats, Goloka Sahoo, John Riverson, Mariza Costa-Cabral, Michael Dettinger, Brent Wolfe, John Reuter, Geoffrey Schladow, and Charles R. Goldman</i>	
14.1	Introduction and background	231

14.2	Historic climate trends in the Tahoe Basin	234
14.3	Modeling the impacts of future climate change	235
14.4	Impacts on the watershed	237
14.5	Impact on the lake	242
14.6	Reducing negative impacts	249
14.7	Summary and conclusions	250
14.8	Acknowledgements	251
	References	251
15	Our New Biological Future? The Influence of Climate Change on the Vulnerability of Lakes to Invasion by Non-Native Species	255
	<i>Marion E. Wittmann, Ka Lai Ngai, and Sudeep Chandra</i>	
15.1	Introduction	255
15.2	Lake Tahoe: a history of change attributed to cultural eutrophication, thermal changes from climate, and the introduction of nonnative species	257
15.3	The effects of an altered thermal regime to Tahoe invasive species	260
15.4	The effect of climate change to water transparency in western montane lakes and the impact on vulnerability to invasion	264
15.5	Complications for natural resource managers: understanding and mitigating the response of nonnative aquatic species to climate change	265
15.6	Acknowledgements	266
	References	266
16	Long-Term Changes in the Lake Kinneret Ecosystem: The Effects of Climate Change and Anthropogenic Factors	271
	<i>Ilia Ostrovsky, Alon Rimmer, Yosef Z. Yacobi, Ami Nishri, Assaf Sukenik, Ora Hadas, and Tamar Zohary</i>	
16.1	Introduction	271
16.2	Changes in the watershed and their long-term impacts on Lake Kinneret	273
16.3	Long-term lake salinity changes	276
16.4	Long-term lake stratification changes	276
16.5	Long-term changes to phytoplankton	277
16.6	The invasion of nitrogen-fixing cyanobacteria (Nostocales)	280
16.7	Winter populations of toxic <i>Microcystis</i>	281
16.8	Long-term variation of chlorophyll and primary production	282
16.9	Long-term sedimentation flux changes	283
16.10	Gaseous methane emission	285
16.11	Long-term changes in fish populations and the fishery	286
16.12	Conclusions	289
16.13	Acknowledgements	290
	References	290
17	Climate Change and the Floodplain Lakes of the Amazon Basin	295
	<i>John M. Melack and Michael T. Coe</i>	
17.1	Introduction	295
17.2	Current limnological conditions	296
17.3	Current climatic conditions	296
17.4	Current characteristics of discharge and inundation	298
17.5	Simulations of inundation under altered climates and land uses	300

17.6	Limnological implications of altered climate, land uses and inundation	303
17.7	Management options and research directions	305
17.8	Acknowledgements	306
	References	306
18	Climatic Variability, Mixing Dynamics, and Ecological Consequences in the African Great Lakes	311
	<i>Sally MacIntyre</i>	
18.1	Introduction	311
18.2	Controls on mixing dynamics in the African Great Lakes	313
18.3	Mixing Dynamics in a shallow Great Lake—Lake Victoria	319
18.4	Mixing Dynamics in a Meromictic Great Lake—Lake Tanganyika	325
18.5	Lake Kivu—a chemically stratified lake	330
18.6	Changes in mixing dynamics and ecosystem dynamics due to changes in climate and land use	331
18.7	Acknowledgements	332
	References	332
19	Effects of Climate Change on New Zealand Lakes	337
	<i>David P. Hamilton, Chris McBride, Deniz Özkundakci, Marc Schallenberg, Piet Verburg, Mary de Winton, David Kelly, Chris Hendy, and Wei Ye</i>	
19.1	Introduction	337
19.2	Geographical and climate perspective	337
19.3	Historical climate	338
19.4	Future climate	340
19.5	Overview of lake types and formation processes	342
19.6	Climate change and impacts on endemic and exotic flora and fauna	343
19.7	Climate change impacts on fish	344
19.8	Climate change impacts on aquatic plants and macroinvertebrates	346
19.9	Effects of climate change on shallow NZ lakes	347
19.10	Effects of climate change on high-altitude NZ lakes	349
19.11	Case study: Lake Taupo	350
19.12	Case study: Lake Pupuke	351
19.13	Case study: surface temperature in monomictic and polymictic Rotorua lakes	351
19.14	Case study: bottom-water dissolved oxygen in Lake Rotoiti	355
19.15	Case study: modeling effects of land use and climate change for Lake Rotorua	356
19.16	Management challenges and mitigation measures	358
19.17	Conclusions	361
	References	362
20	Global Change Effects on Antarctic Freshwater Ecosystems: The Case of Maritime Antarctic Lakes	367
	<i>Antonio Quesada and David Velázquez</i>	
20.1	Introduction	367
20.2	Antarctic lakes	368
20.3	Changes in physical parameters	370
20.4	Watershed changes	373
20.5	Changes in chemical parameters	373
20.6	Changes in the biota	374

20.7	Proposed model for the response of Antarctic maritime lakes to global climate change	376
20.8	Conclusions	379
20.9	Acknowledgements	379
	References	379

Part II Impacts on Societies 383

21 Adaptation to a Changing Climate in Northern Mongolia 385

Clyde E. Gouliden and Munhtuya N. Gouliden

21.1	Background	385
21.2	Impacts of climate change	389
21.3	Herder responses and meteorological data	390
21.4	Adaptations to climate change	392
21.5	Acknowledgement	394
	References	394

22 Managing the Effects of Climate Change on Urban Water Resources 395

Gabriela da Costa Silva

22.1	Introduction	395
22.2	Building adaptive capacity to face urban water stress	396
22.3	Adapting to climate change: the action plans of ten megacities	397
22.4	Integrating agendas in Delhi, Mexico City and São Paulo	400
22.5	The New York City plan: predicting climate change at the watershed scale	403
22.6	Tokyo—let's become a low-energy society!	404
22.7	Don't they need a climate change action plan? The cases of Mumbai, Kolkata (Calcutta), Karachi, Dhaka and Shanghai	405
22.8	Challenges of adapting urban watersheds to climate change	407
	References	409

Part III Mitigation Approaches 413

23 Water Management Preparation Strategies for Adaptation to Changing Climate 415

Balázs M. Fekete and Eugene Stakhiv

23.1	Introduction	415
23.2	Hydrological modeling experiment	417
23.3	Contemporary observations	423
23.4	Conclusions	424
	References	425

24 In Search of Strategies to Mitigate the Impacts of Global Warming on Aquatic Ecosystems 429

Justin D. Brookes, Martin Schmid, Dominic Skinner, and Alfred Wüest

24.1	Global warming and impacts on aquatic ecosystems	429
24.2	First level—potential for reducing temperature in aquatic habitats	431
24.3	Second level—opportunities to modify heat distribution	436
24.4	Third level—opportunities for lakes to reduce greenhouse gases	439

24.5	Conclusions	441
24.6	Acknowledgements	442
	References	442
25	Artificial Decomposition of Water into Hydrogen and Oxygen by Electrolysis to Restore Oxygen in Climate Change-Impacted Waters	449
	<i>Michio Kumagai and Hiroyasu Takenaka</i>	
25.1	Introduction	449
25.2	New strategy based on energy and environmental conservation	450
25.3	Application of an electrolysis system to save nature and society	452
25.4	Acknowledgements	453
	References	453
26	Summary and Conclusions	455
	<i>Michio Kumagai</i>	
26.1	Introduction	455
26.2	Regime shifts in inland waters	456
26.3	Adaptation and mitigation to save inland waters	457
26.4	Conclusion	459
26.5	Acknowledgements	459
	References	459
