DETAILED CONTENTS

1	Inter	a du ati a n	
1		oduction	1
	1.1	What is cancer?	2
	1.2	Evidence suggests that cancer is a disease of the genome at the cellular level	5
	1.3	Influential factors in human carcinogenesis	10
	1.4	Principles of conventional cancer therapies	13
	1.5	Clinical trials	15
	1.6	The role of molecular targets in cancer therapies	16
2	DN	A structure and stability: mutations versus repair	21
	2.1	Gene structure—two parts of a gene: the regulatory region and	
		the coding region	22
	2.2	Mutations	23
	2.3	Carcinogenic agents	25
	2.4	DNA repair and predispositions to cancer	38
		Therapeutic strategies	42
	2.5	Conventional therapies: chemotherapy and radiation therapy	42
	2.6	Strategies that target DNA repair pathways	47
3	Reg	ulation of gene expression	53
	3.1	Transcription factors and transcriptional regulation	53
	3.2	Chromatin structure	59
	3.3	Epigenetic regulation of transcription	60
	3.4	Evidence of a role for epigenetics in carcinogenesis	63
	3.5	Telomeres and telomerase	66
	3.6	MicroRNAs (miRNAs) and regulation of mRNA expression	69
		Therapeutic strategies	70
	3.7	Epigenomic and histonomic drugs	70
	3.8	Telomerase inhibitors	72
4	Gro	wth factor signaling and oncogenes	77
	4.1	Epidermal growth factor signaling: an important paradigm	77
	4.2	Oncogenes	86

4.3 Kinases as drug targets 95 5 The cell cycle 103 5.1 Cyclins and cyclin-dependent kinases (cdks) 104 5.2 Mechanisms of cdk regulation 107 5.3 Progression through the G1 checkpoint 109 5.4 The G2 checkpoint 111 5.5 The mitotic checkpoint 112 5.6 The cell cycle and cancer 114 ● Therapeutic strategies 117 5.7 Cyclin-dependent kinase inhibitors 117 5.8 Other cell cycle kinase targets 118 5.9 Inhibitors of the mitotic spindle 118 6 Growth inhibition and tumor suppressor genes 123 6.1 Definitions of tumor suppressor genes 123 6.2 The retinoblastoma gene 127 6.3 Mutations in the RB pathway and cancer 129 6.4 The p53 pathway 129 6.5 Mutations in the p53 pathway and cancer 137 6.6 Interaction of DNA viral protein products with RB and p53 139 ● Therapeutic strategies 141			Therapeutic strategies	95
5.1Cyclins and cyclin-dependent kinases (cdks)1045.2Mechanisms of cdk regulation1075.3Progression through the G1 checkpoint1095.4The G2 checkpoint1115.5The mitotic checkpoint1125.6The cell cycle and cancer114© Therapeutic strategies1175.7Cyclin-dependent kinase inhibitors1175.8Other cell cycle kinase targets1185.9Inhibition and tumor suppressor genes1236.1Definitions of tumor suppressor genes1236.2The retinoblastoma gene1276.3Mutations in the RB pathway and cancer1296.4The p53 pathway1296.5Mutations in the p53 pathway and cancer1376.6Interaction of DNA viral protein products with RB and p53139© Therapeutic strategies1417Apoptosis1497.1Molecular mechanisms of apoptosis1507.2Apoptosis and cancer1607.3Apoptosis and chemotherapy164© Therapeutic strategies165		4.3	Kinases as drug targets	95
