

Foreword

Introduction

Part I **Advanced Statistics**

Chapter 1 Comparing and Contrasting IBM SPSS AMOS with Other Multivariate Techniques

T-Test

ANCOVA

MANOVA

Factor Analysis and Unobserved Variables in SPSS
AMOS

Revisiting Factor Analysis and a General Orientation to AMOS
The General Model

Chapter 2 Monte Carlo Simulation and IBM SPSS Bootstrapping

Monte Carlo Simulation

Monte Carlo Simulation in IBM SPSS Statistics

Creating an SPSS Model File

IBM SPSS Bootstrapping

Proportions

Bootstrap Mean

Bootstrap and Linear Regression

Chapter 3 Regression with Categorical Outcome Variables

Regression Approaches in SPSS

Logistic Regression

Ordinal Regression Theory

Assumptions of Ordinal Regression Models

Ordinal Regression Dialogs

	Ordinal Regression Output	81
	Categorical Regression Theory	86
	Assumptions of Categorical Regression Models	87
	Categorical Regression Dialogs	87
	Categorical Regression Output	93
Chapter 4	Building Hierarchical Linear Models	101
	Overview of Hierarchical Linear Mixed Models	102
	A Two-Level Hierarchical Linear Model Example	102
	Mixed Models...Linear	104
	Mixed Models...Linear (Output)	113
	Mixed Models...Generalized Linear	116
	Mixed Models...Generalized Linear (Output)	120
	Adjusting Model Structure	126
Part II	Data Visualization	129
Chapter 5	Take Your Data Visualizations to the Next Level	131
	Graphics Options in SPSS Statistics	132
	Understanding the Revolutionary Approach in <i>The Grammar of Graphics</i>	136
	Bar Chart Case Study	138
	Bubble Chart Case Study	143
Chapter 6	The Code Behind SPSS Graphics: Graphics Production Language	147
	Introducing GPL: Bubble Chart Case Study	147
	GPL Help	155
	Bubble Chart Case Study Part Two	156
	Double Regression Line Case Study	160
	Arrows Case Study	163
	MBTI Bubble Chart Case Study	167
Chapter 7	Mapping in IBM SPSS Statistics	173
	Creating Maps with the Graphboard Template Chooser	174
	Creating a Choropleth of Counts Map	175
	Creating Other Map Types	179
	Creating Maps Using Geographical Coordinates	185
Chapter 8	Geospatial Analytics	193
	Geospatial Association Rules	194
	Case Study: Crime and 311 Calls	194
	Spatio-Temporal Prediction	207
	Case Study: Predicting Weekly Shootings	207
Chapter 9	Perceptual Mapping with Correspondence Analysis, GPL, and OMS	217
	Starting with Crosstabs	220
	Correspondence Analysis	224

	Multiple Correspondence Analysis	234
	Crosstabulations	234
	Applying OMS and GPL to the MCA Perceptual Map	242
Chapter 10	Display Complex Relationships with Multidimensional Scaling	249
	Metric and Nonmetric Multidimensional Scaling	251
	Nonmetric Scaling of Psychology Sub-Disciplines	251
	Multidimensional Scaling Dialog Options	253
	Multidimensional Scaling Output Interpretation	259
	Subjective Approach to Dimension Interpretation	264
	Statistical Approach to Dimension Interpretation	266
Part III	Predictive Analytics	271
Chapter 11	SPSS Statistics versus SPSS Modeler: Can I Be a Data Miner Using SPSS Statistics?	275
	What Is Data Mining?	275
	What Is IBM SPSS Modeler?	276
	Can Data Mining Be Done in SPSS Statistics?	278
	Hypothesis Testing, Type I Error, and Hold-Out Validation	280
	Significance of the Model and Importance of Each Independent Variable	284
	The Importance of Finding and Modeling Interactions	284
	Classic and Important Data Mining Tasks	287
	Partitioning and Validating	288
	Feature Selection	291
	Balancing	294
	Comparing Results from Multiple Models	295
	Creating Ensembles	297
	Scoring New Records	300
Chapter 12	IBM SPSS Data Preparation	303
	Identify Unusual Cases	304
	Identify Unusual Cases Dialogs	305
	Identify Unusual Cases Output	311
	Optimal Binning	315
	Optimal Binning Dialogs	316
	Optimal Binning Output	321
Chapter 13	Model Complex Interactions with IBM SPSS Neural Networks	325
	Why "Neural" Nets?	326
	The Famous Case of Exclusive OR and the Perceptron	328
	What Is a Hidden Layer and Why Is It Needed?	332
	Neural Net Results with the XOR Variables	333
	How the Weights Are Calculated: Error Backpropagation	337
	Creating a Consistent Partition in SPSS Statistics	340

	Comparing Regression to Neural Net with the Bank Salary Case Study	341
	Calculating Mean Absolute Percent Error for Both Models	344
	Classification with Neural Nets Demonstrated with the Titanic Dataset	349
Chapter 14	Powerful and Intuitive: IBM SPSS Decision Trees	355
	Building a Tree with the CHAID Algorithm	355
	Review of the CHAID Algorithm	360
	Adjusting the CHAID Settings	363
	CRT for Classification	366
	Understanding Why the CRT Algorithm Produces a Different Tree	368
	Missing Data	369
	Changing the CRT Settings	369
	Comparing the Results of All Four Models	371
	Alternative Validation Options	373
	The Scoring Wizard	374
Chapter 15	Find Patterns and Make Predictions with K Nearest Neighbors	379
	Using KNN to Find “Neighbors”	380
	The Titanic Dataset and KNN Used as a Classifier	381
	The Trade-Offs between Bias and Variance	386
	Comparing Our Models: Decision Trees, Neural Nets, and KNN	388
	Building an Ensemble	391
Part IV	Syntax, Data Management, and Programmability	393
Chapter 16	Write More Efficient and Elegant Code with SPSS Syntax Techniques	395
	A Syntax Primer for the Uninitiated	396
	Making the Connection: Menus and the Grammar of Syntax	401
	What Is “Inefficient” Code?	403
	The Case Study	404
	Customer Dataset	406
	Fixing the ZIP Codes	407
	Addressing Case Sensitivity of City Names with UPPER() and LOWER()	409
	Parsing Strings and the Index Function	410
	Aggregate and Restructure	410
	Pasting Variable Names, TO, Recode, and Count	412
	DO REPEAT Spend Ratios	414
	Merge	415
	Final Syntax File	417
Chapter 17	Automate Your Analyses with SPSS Syntax and the Output Management System	421
	Overview of the Output Management System	422
	Running OMS from Menus	423
