

CHAPTER ONE
LOW-TEMPERATURE PLASMA. GENERAL INFORMATION

1.1.	Quasineutrality. Debye Screening.	1
1.2.	Ideal Plasma	3
1.3.	Equilibrium Plasma	5
1.4.	Local Thermodynamic Equilibrium. Elementary Processes.	7
1.5.	Features of the Transport Phenomena.	10
1.6.	Nonequilibrium Low-Temperature and High-Temperature Plasmas.	13

CHAPTER TWO
ELEMENTARY PROCESSES IN A LOW-TEMPERATURE PLASMA

2.1.	Elastic Collisions	17
2.1.1.	Coulomb Collisions	19
2.1.2.	Elastic Scattering of Electrons by Atoms and Molecules.	21
2.2.	Inelastic Collisions of Electrons with Atoms, Ions, and Molecules.	23
2.2.1.	Excitation and Quenching by Electron Impact	24
2.2.2.	Electron Impact Ionization and Ternary Recombination (Electron-Ion-Electron).	41
2.2.3.	Excitation of Vibrational and Rotational States of Molecules by Electron Impact	46

2.3.	Inelastic Collisions with Heavy Particles.	50
2.3.1.	Excitation and Quenching	52
2.3.2.	Ionization and Three-Particle Recombination.	57
2.3.3.	Associative Ionization and Dissociative Recombination.	60
2.3.4.	Processes Forming Molecular Ions	62
2.3.5.	Charge Transfer.	64
2.3.6.	Formation of Negative Ions	65
2.4.	Elementary Radiative Processes	67
2.4.1.	Bound-Bound Transitions.	67
2.4.2.	Photoionization and Radiative Recombination.	73
2.5.	Average Energy Transferred to an Atom in Collisions	75
2.5.1.	Energy Transfer in Elastic Collisions of Atoms with Electrons.	75
2.5.2.	Energy Transfer in Inelastic Collisions of Electrons with Atoms.	76
2.5.3.	Diffusion Coefficients for a Weakly Bound Electron in the Energy Space of the Atom.	81

CHAPTER THREE

RADIATIVE TRANSPORT OF EXCITATION

3.1.	Basic Characteristics of Radiative Excitation Transport.	86
3.2.	Radiative Excitation Transport Equation.	89
3.3.	Effective-Lifetime Approximation	93
3.4.	Radiative Excitation Transport in an Inhomogeneous Medium	99
3.5.	Domain of Application of the Theory.	105

CHAPTER FOUR

CRITERIA FOR THE ONSET OF NONEQUILIBRIUM STATES

4.1.	Criterion for Detachment of the Electron Temperature.	110
4.2.	Criterion for Equilibrium Ionization and for an Equilibrium Distribution of the Atoms over Levels	117
4.3.	Criterion for the Breakdown of the Maxwellian Distribution	133

CHAPTER FIVE

POPULATION KINETICS OF EXCITED STATES

5.1.	Qualitative Picture of the Population Distribution in a Nonequilibrium Plasma.	141
5.2.	System of Kinetic Balance Equations for the Populations of Excited States.	146
5.3.	Numerical Methods of Solving the System of Kinetic Equations for the Populations.	150
5.4.	Diffusion Approximation.	155
5.5.	Discrete Methods and the Modified Diffusion Approximation.	163
5.5.1.	Single-Quantum Approximation	164
5.5.2.	Single-Quantum Approximation with Allowance for Radiative Transitions, the Predominant-Sink Model	166
5.5.3.	Modified Diffusion Approximation	171
5.6.	Comparison of the Populations Found Analytically with the Results of Computer Calculations and Experiments	175
5.7.	Influence of Atom-Atom Collisions on the Population Distribution.	181
5.8.	Allowance for Sources of Excited Atoms in the System of Balance Equations.	182
5.8.1.	Processes of External Population of an Excited Level.	182
5.8.2.	Processes Which Destroy Excited States	185
5.9.	Features of the Impact-Radiation Kinetics in a Rarefied Plasma	190
5.10.	Some Applications of the Theory.	195
5.10.1.	Determining the Electron Temperature and Density from the Measured Populations of Excited States.	195
5.10.2.	Population Inversion in the Recombinational Decay of a Plasma.	201

CHAPTER SIX

KINETICS OF IONIZATION AND RECOMBINATION

6.1.	Elementary Kinetics of Ionization and Recombination.	207
6.1.1.	Electron-Impact Ionization and Ternary Recombination.	207

6.1.2.	Ionization and Recombination in Collision with Heavy Particles.	209
6.1.3.	Penning Ionization.	210
6.1.4.	Associative Ionization and Dissociative Recombination.	210
6.1.5.	Radiative Recombination	213
6.1.6.	Dielectronic Recombination.	214
6.1.7.	Recombination of Positive and Negative Ions.	216
6.2.	Basic Kinetic Equations for Ionization and Recombination and the Results of Their Numerical Solution.	218
6.2.1.	Definition of the Ionization and Recombination Coefficients.	218
6.2.2.	Results of Numerical Determination of the Ionization and Recombination Coefficients.	223
6.3.	Coefficients of Impact-Radiative Recombination in the Diffusion and Modified Diffusion Approximations.	228
6.3.1.	The Diffusion Approach in the Kinetics of Recombination and Ionization	229
6.3.2.	Coefficients of Impact-Radiative Ionization and Recombination in the Modified Diffusion Approximation.	232
6.3.3.	Comparison with Experimental Data and Numerical Results	237
6.3.4.	Influence of Collisions with Heavy Structureless Particles on the Ionization and Recombination Coefficients.	248
6.3.5.	Impact-Dissociative Recombination and Impact-Associative Ionization	252
6.4.	Electron Density under Steady Nonequilibrium Conditions	255
6.4.1.	Equation for the Nonequilibrium Electron Density	257
6.4.2.	Discussion of the Experimental Data and Comparison with Theoretical Results	259

CHAPTER SEVEN

ELECTRON ENERGY DISTRIBUTION AND ENERGY BALANCE

7.1.	Kinetic Equation and the Electron Energy Balance	262
------	--	-----

7.1.1.	Weakly Ionized Plasma.	263
7.1.2.	Highly Ionized Plasma.	270
7.2.	Inelastic Collisions. Their Influence on the Electron Energy Balance, Excitation Rate, and Ionization	278
7.2.1.	Inelastic Collision Integral. Energy Loss in Inelastic Collisions	278
7.2.2.	The Distribution Function and the Rate of Excitation and Ionization in a Highly Ionized Plasma.	284
7.2.3.	Rate of Excitation and Ionization and the Distribution Function in a Weakly Ionized Plasma	289
7.2.4.	Distribution Function in the Presence of a Source of Fast Electrons.	294
7.3.	Self-Consistent Distributions for Electrons over Energies and Atoms over Excited States. .	299
7.3.1.	Self-Consistent Distributions of Atoms over Levels and Electrons over Energies	300
7.3.2.	Influence of a Non-Maxwellian Distribution on the Coefficient of Impact-Radiative Ionization.	305
7.4.	Electron Energy Distribution in a Strong Electric Field	309
7.4.1.	Electron Energy Distribution in a Weakly Ionized Plasma.	309
7.4.2.	Townsend Ionization Coefficient.	313

CHAPTER EIGHT

TRANSIENT NONEQUILIBRIUM PLASMAS

8.1.	Criteria of Quasisteadiness.	322
8.1.1.	Quasisteadiness in the Excited States	322
8.1.2.	Quasisteadiness of the Electron Temperature.	328
8.2.	Ionizational Relaxation.	331
8.2.1.	Ionization Growth during Optical Heating and behind Shock Fronts.	331
8.2.2.	Recombinational Decay of a Plasma. . .	338
8.2.3.	Recombination of Electrons in an Expanding Plasma	342
8.3.	Radiation from Transient Plasmas	346
8.4.	Relaxation of the Distribution Function. . . .	350

8.5.	Instabilities of a Nonequilibrium Plasma in an External Electric Field.	358
8.5.1.	Ionizational Instability of a Highly Nonequilibrium Plasma	360
8.5.2.	Overheating Instability of the Electron Gas.	369

CHAPTER NINE

SOME TOPICS IN THE KINETICS OF MOLECULAR PLASMAS

9.1.	Electron Energy Balance	374
9.2.	Electron Energy Distribution Function	381
9.3.	Distribution of Molecules over Vibrational Levels.	388
9.3.1.	Quasiequilibrium. The Structure of the Vibrational Distribution.	390
9.3.2.	Steady-State Distribution in the Case of Strong Excitation.	394
9.3.3.	Vibrational Energy Balance.	399
9.4.	Electron-Ion Recombination in Molecular Gases	402
9.4.1.	Recombination Accompanied by the Excitation of Molecular Rotations . . .	402
9.4.2.	Recombination Accompanied by Excitation of Molecular Vibrations. . .	406
9.4.3.	Limits of Applicability. Comparison with Experiment	411
9.5.	Some Topics in the Kinetics of Atomic-Molecular Plasmas	414

APPENDIXES

Appendix 1.	Values of the Level-Population Coefficients of Atomic Hydrogen	424
Appendix 2.	Differential and Finite-Difference Fokker-Planck Equations	433
Appendix 3.	Energy Level Schemes of Atoms.	439
Appendix 4.	Sample Calculation of the Populations of Excited Atoms in the Modified Diffusion Approximation	441
REFERENCES.		449
