

Contents

1	Introduction: Neuronal, Cortical, and Network foundations	1
1.1	Introduction and overview	1
1.2	Neurons	3
1.3	Synaptic modification	4
1.4	Long-term potentiation and long-term depression	5
1.5	Neuronal biophysics	10
1.6	Action potential dynamics	11
1.7	Systems-level analysis of brain function	12
1.8	The fine structure of the cerebral neocortex	17
1.8.1	The fine structure and connectivity of the neocortex	17
1.8.2	Excitatory cells and connections	17
1.8.3	Inhibitory cells and connections	19
1.8.4	Quantitative aspects of cortical architecture	21
1.8.5	Functional pathways through the cortical layers	23
1.8.6	The scale of lateral excitatory and inhibitory effects, and the concept of modules	25
1.9	Backprojections in the cortex	26
1.9.1	Architecture	26
1.9.2	Recall	28
1.9.3	Attention	29
1.9.4	Backprojections, attractor networks, and constraint satisfaction	30
1.10	Autoassociation or attractor memory	30
1.10.1	Architecture and operation	32
1.10.2	Introduction to the analysis of the operation of autoassociation networks	33
1.10.3	Properties	35
1.10.4	Use of autoassociation networks in the brain	39
1.11	Noise, and the sparse distributed representations found in the brain	40
1.11.1	Definitions	41
1.11.2	Advantages of different types of coding	42
1.11.3	Firing rate distributions and sparseness	43
1.11.4	Information theoretic understanding of neuronal representations	57
2	Stochastic neurodynamics	65
2.1	Introduction	65
2.2	Network dynamics: the integrate-and-fire approach	65
2.2.1	From discrete to continuous time	66
2.2.2	Continuous dynamics with discontinuities: integrate-and-fire neuronal networks	67

2.2.3	An integrate-and-fire implementation with NMDA receptors and dynamical synapses	71
3	Attractor networks, energy landscapes, and stochastic dynamics	73
4	Reasons why the brain is inherently noisy and stochastic	78
5	Brain dynamics with and without stochasticity: an introduction to mean-field theory	80
6	Network dynamics: the mean-field approach	81
7	Mean-field based theory	82
2.7.1	Population activity	83
2.7.2	The mean-field approach used in the model of decision-making	85
2.7.3	The model parameters used in the mean-field analyses of decision-making	87
2.7.4	Mean-field neurodynamics used to analyze competition and cooperation between networks	88
2.7.5	A consistent mean-field and integrate-and-fire approach	88
	Short-term memory and stochastic dynamics	91
3.1	Introduction	91
3.2	Cortical short-term memory systems and attractor networks	94
3.3	Prefrontal cortex short-term memory networks, and their relation to perceptual networks	98
3.4	Computational necessity for a separate, prefrontal cortex, short-term memory systems	98
3.5	Synaptic modification is needed to set up but not to reuse short-term memory systems	99
3.6	What, where, and object-place combination short-term memory in the prefrontal cortex	100
3.7	Hierarchically organized series of attractor networks	102
3.8	Stochastic dynamics and the stability of short-term memory	103
3.8.1	Analysis of the stability of short-term memory	104
3.8.2	Stability and noise in the model of short-term memory	106
3.8.3	Alterations of stability	114
3.9	Memory for the order of items in short-term memory	120
3.10	Stochastic dynamics and long-term memory	121
	Attention and stochastic dynamics	121
4.1	Introduction	121
4.2	Biased competition—single neuron studies	126
4.3	A basic computational module for biased competition	128
4.4	The neuronal and biophysical mechanisms of attention	132
4.5	Stochastic dynamics and attention	135
4.6	Disengagement of attention, and neglect	
4.7	Decreased stability of attention produced by alterations in synaptically activated ion channels	135
4.8	Increased stability of attention produced by alterations in synaptically activated ion channels	137
	Probabilistic decision-making	139
5.1	Introduction	139
5.2	Decision-making in an attractor network	140

5.3	The neuronal data underlying a vibrotactile discrimination task	141
5.4	Theoretical framework: a probabilistic attractor network	144
5.5	Stationary multistability analysis: mean-field	146
5.6	Non-stationary probabilistic analysis: spiking dynamics	149
5.6.1	Integrate-and-fire simulations of decision-making	149
5.6.2	Decision-making on a single trial	149
5.6.3	The probabilistic nature of the decision-making	151
5.6.4	Probabilistic decision-making and Weber's law	153
5.6.5	Reaction times	156
5.6.6	Finite-size noise effects	157
5.7	Properties of this model of decision-making	159
5.7.1	Comparison with other models of decision-making	159
5.7.2	Integration of evidence by the attractor network, escaping time, and reaction times	160
5.7.3	Distributed decision-making	161
5.7.4	Weber's law	162
5.7.5	Unifying principles	163
5.8	A multistable system with noise	164
	6 Confidence and decision-making	167
6.1	The model of decision-making	168
6.2	Neuronal responses on difficult vs easy trials, and decision confidence	171
6.3	Reaction times of the neuronal responses	174
6.4	Percentage correct	175
6.5	Simulation of fMRI signals: haemodynamic convolution of synaptic activity	175
6.6	Prediction of the BOLD signals on difficult vs easy decision-making trials	177
6.7	Neuroimaging investigations of task difficulty, and confidence	180
6.7.1	Olfactory pleasantness decision task	180
6.7.2	Temperature pleasantness decision task	181
6.7.3	fMRI analyses	182
6.7.4	Brain areas with activations related to easiness and confidence	182
6.8	Correct decisions vs errors, and confidence	185
6.8.1	Operation of the attractor network model on correct vs error trials	185
6.8.2	Predictions of fMRI BOLD signals from the model	189
6.8.3	fMRI BOLD signals that are larger on correct than error trials	190
6.8.4	fMRI signals linearly related to choice easiness with correct vs incorrect choices	191
6.8.5	Evaluation of the model: a basis for understanding brain processes and confidence for correct vs incorrect decisions	193
6.9	Decisions based on confidence in one's decisions: self-monitoring	196
6.9.1	Decisions about confidence estimates	196
6.9.2	A theory for decisions about confidence estimates	196
6.9.3	Decisions about confidence estimates: neurophysiological evidence	203
6.9.4	Decisions about decisions: self-monitoring	206

6.10	Synthesis: decision confidence, noise, neuronal activity, the BOLD signal, and self-monitoring	207	8.14.7	Synthesis: network instability and schizophrenia	240
6.10.1	Why there are larger BOLD signals for easy vs difficult decisions	207	8.15	Stochastic noise, attractor dynamics, and obsessive-compulsive disorder	244
6.10.2	Validation of BOLD signal magnitude related to the easiness of a decision as a signature of neural decision-making	207	8.15.1	Introduction	244
6.10.3	Predictions of neuronal activity during decision-making	208	8.15.2	A hypothesis about obsessive-compulsive disorder	245
6.10.4	Multiple types of decision are made, each in its own brain region	208	8.15.3	Glutamate and increased depth of the basins of attraction of attractor networks	247
6.10.5	The encoding of decision confidence in the brain	209	8.15.4	Synthesis on obsessive-compulsive disorder	249
6.10.6	Self-monitoring: correction of previous decisions	211	8.16	Predicting a decision before the evidence is applied	251
7	Perceptual detection and stochastic dynamics	213	8.17	Decision-making between interacting individuals	253
7.1	Introduction	213	8.18	Unifying principles of cortical design	253
7.2	Psychophysics and neurophysiology of perceptual detection	213	8.19	Apostasis	257
7.3	Computational models of probabilistic signal detection	215	A	Mean-field analyses, and stochastic dynamics	261
7.4	Stochastic resonance	217	A.1	The Integrate-and-Fire model	261
7.5	Synthesis	218	A.2	The population density approach	262
8	Applications of this stochastic dynamical theory to brain function	219	A.3	The diffusion approximation	263
8.1	Introduction	219	A.4	The mean-field model	265
8.2	Memory recall	219	A.5	Introducing noise into a mean-field theory	267
8.3	Decision-making with multiple alternatives	219	A.6	Effective reduced rate-models of spiking networks: a data-driven Fokker–Planck approach	268
8.4	Perceptual decision-making and rivalry	220	A.6.1	A reduced rate-model of spiking networks	268
8.5	The matching law	221	A.6.2	One-dimensional rate model	271
8.6	Symmetry-breaking	222	References		277
8.7	The evolutionary utility of probabilistic choice	222	Index		300
8.8	Selection between conscious vs unconscious decision-making, and free will	223	B	Colour Plates	303
8.9	Creative thought	224			
8.10	Unpredictable behaviour	224			
8.11	Dreams	225			
8.12	Multiple decision-making systems in the brain	226			
8.13	Stochastic noise, attractor dynamics, and aging	226			
8.13.1	NMDA receptor hypofunction	227			
8.13.2	Dopamine	229			
8.13.3	Impaired synaptic modification	230			
8.13.4	Cholinergic function	230			
8.14	Stochastic noise, attractor dynamics, and schizophrenia	235			
8.14.1	Introduction	235			
8.14.2	A dynamical systems hypothesis of the symptoms of schizophrenia	236			
8.14.3	The depth of the basins of attraction: mean-field flow analysis	237			
8.14.4	Decreased stability produced by reductions of NMDA receptor activated synaptic conductances	238			
8.14.5	Increased distractibility produced by reductions of NMDA receptor activated synaptic conductances	239			
8.14.6	Signal-to-noise ratio in schizophrenia	239
