Acknowledgments	xi
Front Cover Photograph	xiii
Foreword	xv
Preface to the Third Edition	xix

1. Paleoclimatic Reconstruction

Introduction	1
Sources of Paleoclimatic Information	4
Levels of Paleoclimatic Analysis	9
Modeling in Paleoclimatic Research	10

2. Climate and Climatic Variation

The Nature of Climate and Climatic Variation	13
The Climate System	16
Feedback Mechanisms	24
Energy Balance of the Earth and Its Atmosphere	27
Timescales of Climatic Variation	33
Variations of the Earth's Orbital Parameters	36
Solar Forcing	46
Volcanic Forcing	50

3. Dating Methods I

Introduction and Overview	55
Radioisotopic Methods	57
Radiocarbon Dating	59
Potassium-Argon Dating ($^{40}\text{K}/^{40}\text{Ar}$)	83
Uranium-Series Dating	85
Luminescence Dating: Principles and Applications	91
Surface Exposure Dating	98
Fission-Track Dating	100

4. Dating Methods II

Paleomagnetism	103
The Earth's Magnetic Field	104
Magnetization of Rocks and Sediments	105
The Paleomagnetic Timescale	107
Geomagnetic Excursions	108
Relative Paleointensity Variations	110
Secular Variations of the Earth's Magnetic Field	111
Dating Methods Involving Chemical Changes	111
Amino Acid Dating	113
Obsidian Hydration Dating	124
Tephrochronology	125
Biological Dating Methods	129
Lichenometry	129
Dendrochronology	135

5. Ice Cores

Introduction	137
Stable Isotope Analysis	141
Stable Isotopes in Water: Measurement and Standardization	143
Oxygen-18 Concentration in Atmospheric Precipitation	144
Factors Affecting the Stable Isotope Record in Ice Cores	145
Deuterium Excess	151
Dating Ice Cores	154
Radioisotopic Methods	155
Seasonal Variations and Episodic Events	155
Theoretical Models	165
Chronostratigraphic Correlations	167
Paleoclimatic Reconstruction from Ice Cores	167
Ice-Core Records from Greenland	167
Ice-Core Records from Antarctica	175
Past Atmospheric Composition from Polar Ice Cores	180

Greenhouse Gas Records in Ice Cores	184
Ice-Core Records from Low Latitudes	189

6. Marine Sediments

Introduction	196
Paleoclimatic Information from Biological Material in Ocean Cores	197
Oxygen Isotope Studies of Calcareous Marine Fauna	199
Isotopic Composition of the Oceans	201
Oxygen Isotope Stratigraphy	211
Orbital Tuning	215
Orbital Forcing: Evidence from the Marine Record	220
Sea Level Changes and $\delta^{18}\text{O}$	222
Paleotemperatures from Relative Abundance Studies	225
Paleotemperature Reconstruction from Sediment Geochemistry	228
Paleotemperatures from Alkenones	228
Paleotemperatures from TEX_{86} and Long-Chain Diols	231
IP_{25} and Related Sea Ice Proxies	234
Paleotemperatures from Mg/Ca Ratios	238
Oceanographic Conditions at the Last Glacial Maximum (LGM)	239
Paleoclimatic Information from Inorganic Material in Marine Sediments	244
Thermohaline Circulation of the Oceans	248
Tracers in the Ocean	252
Changes in Atmospheric Carbon Dioxide: The Role of the Oceans	258
Abrupt Climate Changes	263
Heinrich Events	267

7. Loess

Chronology of Loess-Paleosol Sequences	284
Paleoclimatic Significance of Loess-Paleosol Sequences	287

8. Speleothems

Isotopic Variations in Speleothems	295
Tropical and Subtropical Paleoclimate Variability from Speleothems	296

Speleothems and Glacial Terminations	299
Millennial to Centennial Scale Changes	302
Late Glacial and Holocene Records	304
Stalagmite Records of the Last Two Millennia	310
Paleoclimatic Information from Periods of Speleothem Growth	311
Speleothems as Indicators of Sea-Level Variations	315

9. Lake Sediments

Sedimentology and Inorganic Geochemistry	320
Varves	323
Pollen, Macrofossils, and Phytoliths	324
Ostracods	327
Diatoms	327
Stable Isotopes	330
Organic Biomarkers	338

10. Nonmarine Geologic Evidence

Introduction	345
Periglacial Features	346
Snowlines and Glaciation Thresholds	351
The Climatic and Paleoclimatic Interpretation of Snowlines and ELAs	352
The Age of Former Snowlines	356
Mountain Glacier Fluctuations	358
Evidence of Glacier Fluctuations	359
The Record of Glacier Front Positions	360
Lake-level Fluctuations	362
Hydrologic Balance Models	366
Hydrologic-Energy Balance Models	370
Regional Patterns of Lake-Level Fluctuations	371

11. Insects and Other Biological Evidence from Continental Regions

Introduction	377
Insects	377
Paleoclimatic Reconstructions Based on Fossil Coleoptera	379
Paleoclimatic Reconstruction Based on Aquatic Insects	384
Former Vegetation Distribution from Plant Macrofossils	388
Arctic Tree Line Fluctuations	389

- Alpine Tree Line Fluctuations 392
- Lower Tree Line Fluctuations and Rodent Middens 395
- Peat 400

12. Pollen

- Introduction 405
- The Basis of Pollen Analysis 406
 - Pollen Grain Characteristics 408
 - Pollen Productivity and Dispersal: The Pollen Rain 410
 - Sources of Fossil Pollen 410
 - Preparation of the Samples 411
 - Pollen Analysis of a Site: The Pollen Diagram 411
 - Zonation of the Pollen Diagram 414
- Pollen Rain as a Representation of Vegetation Composition and Climate 414
- Maps of Modern Pollen Data 416
- Mapping Vegetation Change: Isopolls and Isochrones 418
- How Rapidly Does Vegetation Respond to Changes in Climate? 422
- Quantitative Paleoclimatic Reconstructions Based on Pollen Analysis 425
- Paleoclimatic Reconstruction from Long Quaternary Pollen Records 434
 - Europe 434
 - Sabana de Bogotá, Colombia 438
 - Central American Lowlands 441
 - Amazonia 443
 - Equatorial and Sub-Saharan Africa 445
 - Northeastern Siberia 449

13. Tree Rings

- Introduction 453
- Fundamentals of Dendroclimatology 454
 - Sample Selection 456
 - Cross Dating 458
 - Standardization of Ring-Width Data 463
 - Divergence 469
 - Calibration of Tree-Ring Data 470

- Verification of Climatic Reconstructions 476
- Dendroclimatic Reconstructions 480
 - Reconstructions of Temperatures over the Northern Hemisphere 480
 - Drought Reconstruction 481
 - Reconstruction of Atmospheric Circulation Modes 487
 - Wildfires and Dendroclimatology 490
- Isotopic Dendroclimatology 493
 - $\delta^{18}\text{O}$ and $\delta^2\text{H}$ 493
 - $\delta^{13}\text{C}$ 495

14. Corals

- Coral Records of Past Climate 499
- Paleoclimate from Coral Growth Rates 506
- Luminescence in Corals 506
- $\delta^{18}\text{O}$ in Corals 507
- $\delta^{13}\text{C}$ in Corals 510
- $\Delta^{14}\text{C}$ in Corals 510
- Trace Elements in Corals 511
- Fossil Coral Records 512

15. Historical Documents

- Introduction 517
- Historical Records and Their Interpretation 519
 - Historical Weather Observations 524
 - Historical Records of Weather-Dependent Natural Phenomena 526
 - Phenological and Biological Records 534
- Regional Studies Based on Historical Records 538
 - East Asia 540
 - Europe 544
- Records of Climate Forcing Factors 545
- Climate Paradigms for the Last Millennium 548

Appendix A 553

Appendix B 557
