

Brief Contents

1	Introduction	1
2	The Earth's Aggregate Physical and Chemical State	22
3	Introduction to Thermodynamics	56
4	Mixture and Simple Phase Relations	102
5	Mineral Chemistry.....	144
6	Aqueous Solutions	183
7	Chemistry of Natural Waters.....	221
8	Chemistry of Igneous Rocks	255
9	Chemical Controls on Soil Formation, Diagenesis, Metamorphism, and Hydrothermal Ore Deposition	308
10	Radioactive Isotope Geochemistry	357
11	Stable Isotope Geochemistry	401
12	Surface Sorption Geochemistry	439
13	Chemical Kinetics	466
14	Oxidation and Reduction	513
15	Organic Geochemistry	548
16	Atmospheric Chemistry	577

Appendixes

A	Conventions and Physical Constants.....	600
----------	--	------------

BRIEF CONTENTS

B	Common Conversion Factors	602
C1	Table of Elements with Atomic Number, Weight, and Valence States	604
C2	Electron Configuration of Neutral Elements	607
D	Atomic Abundance of Elements for the Whole Earth	611
E	Gibbs Energy and Volume of Liquid H₂O	613
F1	Interactive Session with SUPCRT92	615
F2	Revised HKF Model for the Thermodynamic Properties of Aqueous Species	623
F3	Thermodynamic Data for Minerals	630
F4	Thermodynamic Data for Gases	643
F5	Thermodynamic Data for Aqueous Species	646
G1	Debye-Hückel A Parameters (in kg^{1/2} mole^{1/2})	651
G2	Debye-Hückel B Parameters (in kg^{1/2} mole^{1/2} Å)	652
H	Decay Chain of Isotopes ²³⁸U, ²³²Th, and ²³⁵U Indicating the Half-Life of Each Isotope	653
I	Balancing Oxidation-Reduction Reactions	654
	Glossary	656
	Index	686

About the Author

1	Introduction	1
	Models in Geochemistry	1
	Standard Units of Measure	4
	Mathematical Review	6
	Portraying Changes in Variables	11
	Phases, Solutions, and Concentration Scales	13
2	The Earth's Aggregate Physical and Chemical State	22
	Meteorites	24
	Density of Earth Material	25
	Oceanic and Continental Crust	26
	Rheologic Divisions of the Earth	28
	Composition of the Earth's Layers	29
	Pressure in the Earth	36
	Heat Flow in the Earth	38
	Temperature in the Earth	44
3	Introduction to Thermodynamics	56
	Changes in U Due to Changes in Heat, Work, and Mass	61
	Extent of and Reversible Paths of Reaction	63
	First Law of Thermodynamics	65
	Second Law of Thermodynamics	67
	Rates of Reaction	70
	Determining Values of Gibbs Energy	72
	Heat Capacity	73
	Properties of H_2O Liquid	76
	Volume Changes	78
	EOS for Fluids	81

Changes in Gibbs Energy with P and T	85
Reference States	88
Simple Phase Relations	92
4 Mixtures and Simple Phase Relations	102
Ideal Mixing	103
Gibbs Energy of a Species with Composition in a Mixture	108
Real Mixtures	113
Law of Mass Action	115
Determination of the Gibbs Energy of a Real Gas in a Mixture	116
Gibbs Energy of Aqueous Species	118
Charged Species in Solution	122
Single Ion Properties	124
Nonideality of Charged Species	125
The Gibbs-Düheim Equation, Open Systems, and the Phase Rule	132
Some Simple Phase Relations Involving Mixtures	134
5 Mineral Chemistry	144
Mineral Stability	149
Bonding Between Atoms	152
Structures of Minerals	153
Structures of Silicate Minerals	155
Clay Minerals	158
Polymorphism	159
Important Polymorphic Transformations	161
Compositional Changes in Minerals	164
Solid Solutions Involving Multiple Sites	171
Intercrystalline Exchange	176
6 Aqueous Solutions	183
Acids, Bases, and pH	187
pH Buffers	193
Alkalinity	195
Alkalinity Titrations	197
Mineral Solubility	200
Solubility of Silicate Minerals	203
Reaction Path Calculations	212
7 Chemistry of Natural Waters	221
River Water	225
Seawater	231
pH of Ocean Water	238
Evaporation of Seawater	239

Seafloor Hydrothermal Systems	242
Groundwater	246
Lakes	248
8 Chemistry of Igneous Rocks	255
Composition of Igneous Rocks	255
Characteristics of Magma	258
Melting of Rocks	260
Melt Speciation Reactions	266
Water in Magmas	267
Eutectics and Melting	275
Solid Solutions and Melting	279
Eutectic Temperature as a Function of Pressure	283
More Complex Temperature–Composition Melting Phase Diagrams	284
Distribution of Trace Components Between Rocks and Melts	286
Partial Melting and Crystallization Processes	296
Mixing Relations	298
9 Chemical Controls on Soil Formation, Diagenesis, Metamorphism, and Hydrothermal Ore Deposition	308
Soil Formation	308
Diagenesis	310
Clay Diagenesis	313
Sandstone Diagenesis	315
Carbonate Diagenesis	316
Diffusion	318
Advection of Fluid	321
Fluid Flow	322
Metamorphism	324
Transport of Fluid at Mid-Crustal and Deeper Levels	327
Linking Fluid Flow in the Crust to Darcy's Law	331
Rate of Fluid Production	333
Width of Fractures and Quartz Veins	336
Ore Deposits	339
Porphyry Ore Deposits	340
Metal Sulfide Solubilities	343
Rock Alteration	348
10 Radioactive Isotope Geochemistry	357
Radioactive Decay	361
Beta Decay	361
Alpha Decay	362

Spontaneous Fission	365
Energy of Isotope Decay	365
Determining Isotope Decay Times	366
Decay Time Equation	366
Closure Temperature	368
Isocrons	368
Rubidium-Strontium Systematics	369
Age Dating	369
Determining Magma Sources	371
Strontium Isotopes and Global Tectonic Events	371
Samarium-Neodymium Systematics	373
Age Dating	373
Chondritic Uniform Reservoir and Epsilon Values	373
Combining Neodymium and Strontium Isotope Analysis	375
Uranium-Thorium-Lead Systematics	378
Age Dating	378
Concordia Diagrams	379
Holmes-Houterman Common Pb Model	381
U and Th Decay Series Dating	382
Potassium-Argon Systematics	385
Age Dating	385
$^{40}\text{Ar}/^{39}\text{Ar}$ Dating	387
Artificial Isotopes	387
Cosmogenic Isotopes	388
Carbon-14 Dating	388
Other Cosmogenic Isotope Techniques	390
Fission Track Dating	391

11 Stable Isotope Geochemistry 401

Types of Isotope Fractionation	404
Isotope Exchange Between Minerals and Water	410
$\delta^{18}\text{O}$ of Marine Carbonates	411
$\delta^{18}\text{O}$ and δD of Groundwaters	412
$\delta^{18}\text{O}$ of Rocks	413
Changes of $\delta^{18}\text{O}$ During Open System Mass Transfer	417
Carbon Isotopes	419
Temporal Changes in $\delta^{13}\text{C}$	420
Sulfur Isotopes	425
Geothermometry Using Sulfur Isotopic Ratios	430

12 Surface Sorption Geochemistry 439

Thermodynamics of Surfaces	443
----------------------------	-----

Metal Ion Absorption 452

Colloids 458

Hydrophobic Sorption 459

13 Chemical Kinetics 466

First-Order Decay and Growth Equations 468

Elementary Reactions 470

Temperature Dependence of Rates 479

Rates From Irreversible Thermodynamics 481

Solid-Fluid Reactions 486

Feldspar Dissolution in H_2O 489

Relative Rates of Silicate Dissolution 493

Reaction Rates Between Minerals at Elevated

Temperatures and Pressures 493

Rates of Material Transport 500

Transport by Fluid Flow 502

Solute Transport in Flowing Fluid 504

14 Oxidation and Reduction 513

Gibbs Energy of Redox Reactions 515

Calculating the Eh of a Non-Standard-State Reaction 519

Stability of H_2O and Eh - pH Diagrams 520

Eh of Natural Waters 523

Eh in Sedimentary Fluids 526

Fe Species 532

Activity of Electrons in Solution 537

Oxygen Fugacity Diagrams 538

Using O_2 Buffer Reactions to Control H_2 541

O_2 Fugacities of Magnetite-Ilmenite Pairs 542

Oxygen-Reduction in Organic Compounds 543

15 Organic Geochemistry 548

Carbon Cycle 548

Organic Chemistry Nomenclature 550

Aliphatic Molecules 552

Amino Acids and Proteins 557

Carbohydrates 558

Petroleum and Lipids 561

Organic Carbon in Natural Waters 562

Diagenesis of Organic Material 562

Aquatic Microbial Chemistry 565

Hazardous Organic Compounds 566

Pesticides 569

Phenoxy Herbicides and Dioxins 570

16 Atmospheric Chemistry 577Atmospheric CO₂ Increase 588

Stratospheric Ozone 590

Photochemical Smog 593
