

Contents

1	Preliminaries, Notation, and Spaces of Functions	1
1.1	Notation	1
1.1.1	Numbers	1
1.1.2	Topological Objects, Domains, and Boundaries	2
1.1.3	Vectors and Algebraic Operations	2
1.2	Derivatives and Differential Operators	3
1.2.1	Gradient	4
1.2.2	Divergence	4
1.2.3	Other Differential Operators	5
1.3	Function Spaces	5
1.3.1	Continuous Functions	5
1.3.2	Integrable Functions	7
1.4	Sobolev Spaces	10
1.4.1	Nonlinear Compositions	12
1.4.2	Dual Spaces to Sobolev Spaces	12
1.4.3	Embeddings	13
1.4.4	Sobolev–Slobodeckii Spaces	14
1.4.5	Trace Theorem for Sobolev Functions and Green’s Formula	15
1.4.6	Poincaré’s Inequality	16
1.4.7	Functions of Bounded Variations	16
1.5	Fourier Transform	17
1.5.1	Pseudodifferential Operators	18
1.5.2	Hörmander–Mikhlin Theorem	20
1.6	Weak Convergence of Integrable Functions	20
1.7	Fixed-Point Theorem	22

Part I Mathematics of Compressible Fluid Flows

2	Mathematical Model	25
2.1	Mass Conservation	26
2.2	Balance of Momentum	27
2.3	Constitutive Relations and Navier–Stokes System	28
2.4	Spatial Domain and Boundary Conditions	29
2.5	Initial Conditions and Well Posedness	30
3	Weak Solutions	31
3.1	Equation of Continuity: Weak Formulation	32
3.1.1	Weak–Strong Compatibility	32
3.1.2	Weak Continuity in Time	32
3.1.3	Total Mass Conservation, Positive Density, and Vacuum	35
3.2	Balance of Momentum: Weak Formulation	36
3.2.1	Weak Continuity in Time	37
3.2.2	Admissibility Criteria	38
4	A Priori Bounds	39
4.1	Total Mass Conservation	39
4.2	Total Energy Balance	40
4.3	Pressure Estimates	43
5	Weak Formulation Revisited	49
5.1	Regularity Class	50
5.2	Renormalized Equation of Continuity	50
5.3	Momentum Equation	51
5.4	Energy Inequality	52
6	Weak Sequential Stability	55
6.1	Uniform Bounds	56
6.1.1	Energy Bounds	56
6.1.2	Pressure Estimates	58
6.2	Limit Passage	60
6.2.1	Compactness in Convective Terms	61
6.2.2	Limit in the Equation of Continuity	62
6.2.3	Limit in the Momentum Equation	64
6.3	Strong Convergence of the Densities	65
6.3.1	Amplitude of Density Oscillations	65
6.3.2	Effective Viscous Flux	68
6.3.3	Compactness via Div–Curl Lemma	70

Part II Existence of Weak Solutions via a Numerical Method

7	Numerical Method	81
7.1	Time Discretization	82
7.2	Spatial Discretization	83
7.2.1	Spatial Domain, Triangulation, and Mesh	83
7.2.2	Finite Elements, Finite Volumes, and Function Spaces ...	86
7.2.3	Discretization of Convective Terms, Upwind	87
7.3	Numerical Scheme	90
7.4	Discrete Renormalization	91
7.5	Energy Inequality	94
7.5.1	Pressure Potential	95
7.5.2	Time Derivative of the Total Energy	95
7.5.3	Convective Term	95
7.5.4	Conclusion	98
7.6	Well Posedness	99
7.6.1	Positivity of the Numerical Densities	99
7.6.2	Solvability of the Numerical Scheme	101
8	Stability of the Numerical Method	103
8.1	Function Spaces	103
8.1.1	Approximation by Smooth Functions	105
8.1.2	Discrete Sobolev Embeddings	106
8.2	Stability Estimates	107
8.2.1	Total Mass Conservation	108
8.2.2	Energy Estimates	108
8.2.3	Numerical Dissipation	109
9	Consistency	111
9.1	Preliminaries and Useful Estimates	111
9.1.1	Projections	112
9.1.2	Interpolation Inequalities	113
9.1.3	Trace Estimates	114
9.2	Consistency Formulation of the Continuity Method	114
9.3	Consistency Formulation of the Momentum Method	122
9.3.1	Discretized Time Derivative	123
9.3.2	Upwind in the Momentum Equation	125
9.3.3	Momentum Consistency: Conclusion	133
10	Convergence	135
10.1	Refined Pressure Estimates	135
10.2	Convergence in Field Equations, Convective Terms, and Time Derivatives	139
10.2.1	Convergence in Convective Terms	140
10.2.2	Time Derivatives	143
10.2.3	Limit in Fields Equations	144

10.3	Strong Convergence of the Numerical Densities	145
10.3.1	Effective Viscous Flux Identity	149
10.3.2	Density Convergence: Conclusion	151
10.4	Energy Inequality and Convergence of Numerical Solutions	152
10.5	Weak Solutions to the Navier–Stokes System	153

Part III Existence Theory for General Pressure

11	Weak Solutions with Artificial Pressure	157
11.1	Uniform Bounds	158
11.2	Energy Estimates	159
11.3	Pressure Estimates	159
11.4	Weak Limit of the Sequence of Approximate Solutions	163
12	Strong Convergence of the Approximate Densities	165
12.1	Effective Viscous Flux	165
12.2	Oscillations Defect Measure	167
12.2.1	Oscillations Defect Measure and Renormalization	168
12.2.2	Oscillations Defect Measure and Effective Viscous Flux	171
12.3	Existence of Weak Solutions	173
13	Concluding Remarks and Suggestions for Further Reading	177
	References	179
	Index	185
