

Preface	7
GEOMORPHOLOGICAL REGIONS OF HUNGARY	9
1. Introduction	9
2. Distribution of relief classes in Hungary	9
3. Geomorphological subdivisions of Hungary	13
4. Description of the geomorphological regions of Hungary	15
The Great Hungarian Plains	15
Alluvial fans (higher than flood-plains)	21
Flood-plain regions	28
The Little Plain	38
Young and old alluvial-fan plains of the Danube and its tributaries	39
The Transdanubian Hills	45
Transdanubian Mountains	54
Orography and structural morphology	54
The Paleozoic basement on the surface	59
Mesozoic horsts	60
Dismembering of the surface of etchplanation	63
Morphotypes of Mesozoic horsts	66
Andesitic volcanoes	68
Basaltic volcanoes	70
Hill regions and their evolution	70
Some typical exogenic landforms	75
Raised beaches	75
Pediments and foothill alluvial fans	78
Valleys and valley basins	80
Terraces and travertine horizons	80
Karst features	82
North-Hungarian or Intra-Carpathian Mountains	84
Mesozoic and young volcanic mountain types	84
The North-Hungarian intramontane basins	91

Terrace formation along the uplifting and the subsiding valley sections	95
Climatic change and geomorphic evolution in the Pliocene and Pleistocene	97
GEOMORPHOLOGICAL MAPS OF HUNGARY	103
1. Introduction	103
2. Outline (small scale) geomorphological maps of Hungary	103
3. Explanations to the geomorphological maps of Hungary	104
Types and classes of reliefs	104
4. Individual forms and form-groups	107
5. Lithology of sediments covering the surface	107
6. The age of the surface and the relief-forms	108
7. Hydrographic and hydrometeorological data, specification of natural resources	109
I. Remnants of old erosion surfaces	110
II. Remnants of Neogene surfaces of planation	110
III. Quaternary fluvial terraces, alluvial fan terraces and travertine horizons . . .	111
Conclusion	112
References	113
