

Technoscience and Everyday Life

"Michael's very fine eye for the interweaving of the technical and the social refreshes our understanding of everyday life. He brings its analysis down from the heady heights of critique to the much more exciting level of a complex and intricate mundanity."

Tony Bennett, The Open University

Theoretically innovative and empirically wide-ranging, this book examines the complex relations between technoscience and everyday life. It draws on numerous examples, including both mundane technologies such as Velcro, Post-it Notes, mobile phones and surveillance cameras, and the esoterica of xenotransplantation, new genetics, nanotechnology and posthuman society.

Technoscience and Everyday Life traces the multiple ways in which technoscience features in and affects the dynamics of everyday life, and explores how the everyday influences the course of technoscience. In the process, it takes account of a range of core social scientific themes: body, identity, citizenship, society, space, and time. It combines critique and microsocial analysis to develop several novel conceptual tools, and addresses key contemporary theoretical debates on posthumanism, social-material divides, process philosophy and complexity, temporality and spatiality.

The book is a major contribution to the sociology of everyday life, science and technology studies, and social theory.

Mike Michael is Professor of Sociology of Science and Technology at the Sociology Department, Goldsmiths College, University of London. His interests include public understanding of science, sociology of everyday life, and technoscience and culture. His most recent book (with Alan Irwin) is *Science, Social Theory and Public Knowledge* (Open University Press, 2003).
