Authors, xvii

CHAPTER 1 ■ Six Degrees of Freedom Equations of Motion	1
1.1 DEFINITION OF AXIS SYSTEMS	5
1.1.1 Body-Fixed Axis System	5
1.1.2 Earth-Fixed Axis System	7
1.1.3 Wind-Fixed Axis System	7
1.2 DEFINITION OF VARIABLES	10
1.3 3–2–1 TRANSFORMATION	16
1.3.1 Earth- and Body-Fixed Axes	17
1.3.2 Earth- and Wind-Fixed Axes	19
1.3.3 Wind- and Body-Fixed Axes	21
1.3.4 Relation between the Body-Axis and Wind-Axis Euler Angles	22
1.4 RELATION BETWEEN ANGULAR VELOCITY VECTOR AND EULER ANGLE RATES	24
1.4.1 Relation between Body-Axis Angular Velocity Components (p, q, r) and Euler Angle Rates $(\dot{\phi}, \dot{\theta}, \dot{\psi})$	24
1.4.2 Relation between Wind-Axis Angular Velocity Components (p_w, q_w, r_w) and Euler Angle Rates $(\dot{\mu}, \dot{\gamma}, \dot{\chi})$	27
1.4.3 Difference between the Body-Axis Angular Velocity (p, q, r) and Wind-Axis Angular Velocity (p_w, q_w, r_w)	27

1.5	TRANSLATIONAL EQUATIONS OF MOTION	29
1.6	REPRESENTATION OF FORCES ACTING ON THE AIRPLANE	34
1.6.1	Gravity	34
1.6.2	Aerodynamic Force	35
1.6.3	Propulsive Force	37
1.7	ROTATIONAL EQUATIONS OF MOTION	38
1.8	REPRESENTATION OF MOMENTS ACTING ON THE AIRPLANE	42
1.8.1	Aerodynamic Moment	42
1.8.2	Propulsive Moment	43
1.9	SELECTION OF EQUATIONS FOR SPECIFIC PROBLEMS	44
1.9.1	Simulation of Arbitrary Maneuver	45
1.9.2	Steady States Such as Level Flight, Shallow Climb/Descent, Horizontal Turn, Spin, Etc.	45
1.9.3	Longitudinal Flight Steady States	47
1.9.4	Constant-Velocity Flight in the Longitudinal Plane	47
1.9.5	Constant-Velocity Rolling Maneuvers	48
1.10	EQUATIONS OF MOTION IN THE PRESENCE OF WIND	48
	REFERENCE	54
CHAPTER 2 ■ Modeling and Interpreting the Aerodynamics		55
2.1	DEFINITION OF AERODYNAMIC COEFFICIENTS	55
2.2	MODELING OF AERODYNAMIC COEFFICIENTS	57
2.3	STATIC AERODYNAMIC COEFFICIENT TERMS	60
2.3.1	Longitudinal Coefficients with Angle of Attack	60
2.3.2	Lateral Coefficients with Angle of Attack and Sideslip Angle	64
2.3.3	Variation with Mach Number	66
2.3.4	Variation with Control Surface Deflection	68
2.4	DYNAMIC AERODYNAMIC COEFFICIENT TERMS	70
2.4.1	Pitching Moment Due to Relative Pitch Rate, $C_{m_{q1}}$	71

2.4.2	Yawing and Rolling Moment Due to Relative Yaw Rate, $C_{n_{r1}}$ and $C_{l_{r1}}$	72
2.5	FLOW CURVATURE COEFFICIENT TERMS	73
2.5.1	Yawing and Rolling Moment Due to Wind-Axis Yaw Rate, $C_{n_{r2}}$ and $C_{l_{r2}}$	73
2.5.2	Pitching Moment Due to Wind-Axis Pitch Rate, $C_{m_{q2}}$	74
2.5.3	Rolling Moment Due to Wind-Axis Roll Rate, $C_{l_{p2}}$	74
2.6	DOWNWASH LAG TERMS	76
2.7	SAMPLE SIMULATION CASES	78
2.7.1	Example Airplane and Aerodynamic Models	82
2.7.1.1	<i>F-18 Low-Angle-of-Attack Model</i>	82
2.7.1.2	<i>F-18/HARV High-Angle-of-Attack Model</i>	83
2.7.1.3	<i>Pseudo-Steady-State Model for Rapid Rolling Maneuvers</i>	83
2.7.2	Example Simulation Results	85
	REFERENCES	102
CHAPTER 3	■ Introduction to Dynamical Systems Theory	103
3.1	TYPES OF STEADY STATES	108
3.1.1	Equilibrium States	109
3.1.2	Periodic States	110
3.1.3	Quasi-Periodic States	110
3.1.4	Chaotic States	110
3.2	STABILITY OF STEADY STATES	110
3.2.1	Stability of Equilibrium States	111
3.2.2	Stability of Periodic Orbits	118
3.3	BIFURCATIONS OF STEADY STATES	122
3.3.1	Stationary Bifurcations of Equilibrium States	125
3.3.1.1	<i>Saddle-Node Bifurcation</i>	125
3.3.1.2	<i>Transcritical Bifurcation</i>	128
3.3.1.3	<i>Pitchfork Bifurcation</i>	129
3.3.1.4	<i>Perturbation to Transcritical and Pitchfork Bifurcations</i>	130

3.3.2	Hopf Bifurcation of Equilibrium States	131
3.3.3	Bifurcations of Periodic States	133
3.4	CONTINUATION ALGORITHMS	136
3.5	CONTINUATION FRAMEWORK FOR MULTIPARAMETER SYSTEMS	144
3.5.1	Scheduling the Parameters in a Multiparameter System	145
3.5.2	Influence of Aircraft Control Parameters on Constraints	148
	REFERENCES	156
CHAPTER 4 ■ Longitudinal Flight Dynamics		157
4.1	LONGITUDINAL STEADY STATES (TRIMS)	160
4.1.1	Modeling Engine Thrust	161
4.2	LONGITUDINAL TRIM AND STABILITY ANALYSIS	163
4.2.1	Longitudinal Trim and Stability with Varying Angle of Attack	163
4.2.2	Longitudinal Trim and Stability with Varying Throttle Setting	165
4.3	LEVEL FLIGHT TRIM AND STABILITY ANALYSIS	167
4.3.1	Level Flight Airplane Performance	171
4.4	CLIMBING/DESCENDING FLIGHT TRIM AND STABILITY ANALYSIS	173
4.5	PULL-UP AND PUSH-DOWN MANEUVERS	176
4.6	WIND EFFECTS ON LONGITUDINAL DYNAMIC MODES	182
	REFERENCE	185
CHAPTER 5 ■ Longitudinal Feedback Control		187
5.1	GENERIC FLIGHT CONTROL SYSTEM	187
5.2	AIRFRAME, SENSOR, FILTER, ACTUATOR	188
5.3	GENERIC LONGITUDINAL FCS STRUCTURE	191
5.4	LONGITUDINAL FLIGHT CONTROL MODES	194
5.5	LONGITUDINAL FEEDBACK CONTROL LAW	196

5.5.1	Gain Scheduling	199
5.6	DYNAMIC INVERSION CONTROL LAW	204
5.7	CLOSED-LOOP STABILITY ANALYSIS	207
5.7.1	With Thrust Vectoring Control Included	212
	REFERENCES	215
CHAPTER 6 ■	Lateral-Directional Flight Dynamics and Control	217
6.1	LATERAL-DIRECTIONAL MODES IN STRAIGHT AND LEVEL LONGITUDINAL FLIGHT	218
6.2	HORIZONTAL LEVEL TURN TRIMS	225
6.2.1	Formulation and Constraints	226
6.2.2	Parameter Schedules	227
6.2.3	Turn Performance	228
6.3	NONZERO SIDESLIP TRIM AND STABILITY ANALYSIS	234
6.4	WING ROCK ONSET AND ITS PREDICTION	237
6.4.1	Analytical Criterion for Wing Rock Onset	239
6.4.1.1	<i>Second-Order Form of the Perturbed Lateral-Directional Equations</i>	243
6.4.1.2	<i>Matrix Form of the Perturbed Lateral-Directional Equations</i>	246
6.4.1.3	<i>Static Instability Criterion</i>	246
6.4.1.4	<i>Approximation by Hamiltonian Dynamical System</i>	247
6.4.1.5	<i>Dynamic Instability Mechanism</i>	249
6.5	LATERAL-DIRECTIONAL FEEDBACK CONTROL SYSTEM	251
	REFERENCES	255
CHAPTER 7 ■	Coupled Lateral–Longitudinal Flight Dynamics	257
7.1	INERTIA COUPLED ROLL MANEUVERS	260
7.1.1	Zero-Sideslip Roll Maneuvers	266
7.1.2	Velocity-Vector Roll Maneuvers	269
7.2	HIGH AOA FLIGHT DYNAMICS AND SPIN	272

7.2.1	Analytical Criterion for Spin Susceptibility	277
7.2.1.1	<i>Derivation of the Criterion</i>	279
7.3	BIFURCATION TAILORING/TRIM SHAPING AS CONTROL STRATEGY	282
7.3.1	Linear ARI Law for Jump Prevention	283
7.3.2	Trim Shaping for Level Flight Trims	285
7.3.3	Rolling Pull-Down Maneuver with Zero Sideslip	287
7.4	CONTROL PROTOTYPING FOR RECOVERY FROM SPIN	289
7.4.1	Spin Recovery Using Sliding Mode Control	293
7.5	CAREFREE MANEUVERING USING SLIDING MODE CONTROLLER	294
7.5.1	Minimum Radius Turn Maneuver Using Sliding Mode Controller	295
7.5.2	Maneuver Design Based on AER	297
	REFERENCES	302
CHAPTER 8 ■ Dynamics and Control of a 10-Thruster Flight Vehicle		303
8.1	FLIGHT DYNAMICS OF THE 10-THRUSTER DACS	303
8.2	MODELING THE THRUSTER FORCES AND MOMENTS	308
8.3	MODELING THE CHANGE IN CG AND MOMENTS OF INERTIA	310
8.4	MODELING THE AERODYNAMIC FORCES AND MOMENTS	312
8.5	CONTROL AND GUIDANCE FRAMEWORK FOR 10-THRUSTER DACS	314
8.6	DACS CONTROL LAW	316
8.6.1	Navigation Equations and Flight Path Controller	316
8.6.2	Attitude Equations and Attitude Controller	318
8.6.3	Rate Equations and Rate Controller	319
8.6.4	Issue of Invertibility	321
8.6.5	The Question of Stability	321
8.7	DACS GUIDANCE LAW	322

8.7.1	Derivation of Dynamic Inversion-Based Guidance Law	323
8.7.1.1	<i>In Terms of Azimuth and Elevation Angles</i>	325
8.7.1.2	<i>A Question of Invertibility</i>	328
8.7.1.3	<i>Decoding the Inversion-Based Guidance Law</i>	328
8.8	SIMULATION OF 10-THRUSTER DACS FLIGHT WITH GUIDANCE AND CONTROL	329
	REFERENCE	334
	INDEX,	335
