Foreword by Peter L. Bocko	xiii
Preface	xi
Part I: Flexible Glass & Flexible Glass Reliability	
1 Introduction to Flexible Glass Substrates	3
<i>Sean M. Garner, Xinghua Li and Ming-Huang Huang</i>	
1.1 Overview of Flexible Glass	3
1.2 Flexible Glass Properties	5
1.2.1 Optical Properties	7
1.2.2 Surface Attributes	12
1.2.3 Barrier Properties	15
1.2.4 Dimensional Stability	16
1.2.5 Thermal Capability	17
1.2.6 Electrical Properties	17
1.2.7 Mechanical Properties	19
1.3 Flexible Glass Web for R2R Processing	21
1.4 Flexible Glass Laser Cutting	22
1.5 Summary	23
References	24
2 The Mechanical Reliability of Thin, Flexible Glass	35
<i>G. Scott Glaesemann</i>	
2.1 Introduction	35
2.2 The Mechanical Reliability of Glass	36
2.2.1 Fatigue in Glass	37
2.2.2 Managing Fatigue	43
2.2.2.1 Minimum Strength Design	45
2.2.2.2 Failure Probability Design	46
2.3 Applied Stress	49
2.3.1 Global Stress Events	50
2.3.2 Localized Stresses	52

2.4	The Strength of Thin Glass Sheets	52
2.4.1	Flaws in Glass	53
2.4.2	Practical Glass Strength	55
2.4.3	Surface Strength of Thin, Flexible Glass Sheets	56
2.4.4	Edge Strength of Thin, Flexible Glass Sheets	58
2.5	Summary	60
	References	60
3	Low Modulus, Damage Resistant Glass for Ultra-Thin Applications	63
	<i>Timothy M. Gross and Randall E. Youngman</i>	
3.1	Introduction	64
3.2	Young's Modulus and Basic Fracture Mechanics	64
3.2.1	Young's Modulus Dependence on Composition	65
3.2.2	Young's Modulus Dependence on Fictive Temperature	74
3.3	Vickers Indentation Cracking Resistance of Calcium Aluminoborosilicate Glasses	77
3.4	Summary	82
	References	83
Part II: Flexible Glass Device Fabrication		
4	Roll-to-Roll Processing of Flexible Glass	87
	<i>James C. Switzer III and Mark D. Poliks</i>	
4.1	Introduction	87
4.1.1	Substrates	88
4.2	Roll-to-Roll Manufacturing Process Equipment	90
4.2.1	CHA High-Vacuum Roll-To-Roll Sputter System	91
4.2.2	General Vacuum Equipment Optilab Roll-to-Roll Sputter Deposition System	93
4.2.3	R2R Wet Processing Systems	99
4.2.4	Azores 6600 (Rudolph Technologies) Step and Repeat Photolithography System	100
4.2.5	Other Web Handling and Coating Systems	104
4.3	R2R Deposition and Patterning of ITO on Thin Flexible Glass and Plastic Films	104
4.3.1	Room Temperature ITO Depositions on PEN	106
4.3.2	Etching of ITO on Flexible Plastic and Glass	112
4.3.3	Elevated Temperature Depositions	116
4.4	Conclusions	121

4.5	Future	122
	Acknowledgements	122
	References	123
5	Thin-Film Deposition on Flexible Glass by Plasma Processes	129
	<i>Manuela Junghänel and John Fahlteich</i>	
5.1	Introduction	130
5.2	Substrate Requirements for Vacuum Processes	130
5.2.1	Parameters Influencing Film Growth on Glass Surfaces	130
5.2.2	Vacuum-Based Surface Treatment	131
5.2.2.1	Inverse Sputter Etching	132
5.2.2.2	Ion Surface Treatment	133
5.3	Types of Vacuum Processes	133
5.3.1	Overview of Vacuum Coating Technologies	134
5.3.1.1	Thermal and Electron-Beam Evaporation	135
5.3.1.2	Magnetron Sputtering	136
5.3.1.3	Plasma-Assisted Chemical Vapor Deposition	142
5.3.1.4	Atomic Layer Deposition	146
5.3.2	Thin Film Processing on Glass	150
5.3.2.1	Sheet-to-Sheet Processing	150
5.3.2.2	Roll-to-Roll Processing	152
5.3.2.3	In-line Monitoring	154
5.4	Large Area Coatings onto Flexible Glass	159
5.4.1	Transparent Conductive Coatings	159
5.4.2	Antireflective Coatings	163
5.5	Thermal Pre- and Post-Treatment for Flexible Glass	167
5.5.1	Heating of Flexible Glass	168
5.5.2	Functionalization of Thin Films by Ultra-Fast Thermal Annealing	168
5.6	Future Trends in Vacuum Processing on Flexible Glass	173
	References	174
6	Printed Electronics Solutions-Based Processes with Flexible Glass	181
	<i>Jukka Hast, Elina Jansson, Riikka Suhonen, Liisa Hakola, Markus Tuomikoski, Marja Vilkmán, Kari Rönkä and Harri Kopola</i>	
6.1	Introduction	181
6.2	Printing Processes	183
6.2.1	Printed Electronics Background	183
6.2.2	Ink Formulations	183

6.2.3	Conventional Printing Processes	185
6.2.3.1	Flexography Printing	185
6.2.3.2	Gravure Printing	187
6.2.3.3	Emerging Printing Techniques	190
6.2.3.4	Screen Printing	192
6.2.4	Digital Printing – Inkjet	195
6.3	Summary of Different Printing Processes	198
6.4	Example – Printed OPV Cell on Ultra-Thin Flexible Glass	198
6.5	Future	203
	References	205

Part III: Flexible Glass Device Applications

7	Flexible Glass in Thin Film Photovoltaics	213
	<i>Matthew O. Reese and Teresa M. Barnes</i>	
7.1	Introduction	213
7.2	General Substrate Requirements for Photovoltaic Applications	215
7.3	Requirements for CdTe Superstrates	233
7.4	Standard CdTe Device Stack and Processing	235
7.5	Flexible CdTe Device Performance	236
7.6	Flex and Bend Testing of CdTe	238
7.6.1	TCO Flex Bend/Reliability	238
7.6.2	Device Static Bend	241
7.7	Future Trends/Directions	241
	References	242
8	Ultra-Thin Glass for Displays, Lighting and Touch Sensors	247
	<i>Steffen Hoehla and Norbert Fruehauf</i>	
8.1	Introduction and Overview	247
8.1.1	Different Levels of Flexibility	248
8.1.2	Specific Advantages of Ultra Thin Substrates	249
8.2	Ultra Thin Glass Substrates for Flexible Displays	254
8.2.1	Specific Substrate Requirements for Flexible Displays	254
8.2.2	Comparison of Common Flexible Substrate Materials	255
8.2.3	Overview – Substrate Requirements for High Quality Flexible Displays	264

8.3	Thin Film Device Processing on Ultra Thin Glass	265
8.3.1	Various Processing Concepts for Ultra Thin Glass	265
8.3.2	AMLCD Process on Free Standing Ultra-Thin Glass	268
8.4	Thin Glass Displays	282
8.4.1	Thin Glass Display Demonstrators	282
8.4.2	Commercially Available Thin Glass Displays	284
	References	285
9	Guided-Wave Photonics in Flexible Glass	291
	<i>Sheng Huang, Mingshan Li and Kevin P. Chen</i>	
9.1	Flexible Guided-Wave Photonics	292
9.2	Flexible Polymer Passive Waveguide Photonics	292
9.3	Flexible Polymer Active Waveguide Photonics	299
9.4	Flexible Polymer Waveguides for Electro-Optic Applications	301
9.5	Flexible Glass Optical Substrates	303
9.6	Ultrafast-Laser Fabrication of Embedded Waveguides	305
9.7	Embedded Waveguides in Flexible Glass	307
9.8	Prospective of Thermal Poling in Flexible Glass Waveguides	321
9.9	Summary and Future	324
	References	325
10	Flexible Glass for Microelectronics Integration	331
	<i>Murat Okandan, Jose Luis Cruz-Campa and Gregory N. Nielson</i>	
10.1	Introduction	332
10.2	Integration Technology Description: Why Flexible Glass for Electronics/Sensor Integration (3 Dimensional Integrated Circuits – 3DIC)	332
10.3	Example of Microelectronics/Sensor Integration	333
10.3.1	Flexible PV	334
10.3.2	Sensor Array Example	334
10.4	Fabrication Techniques	336
10.4.1	Batch Fabrication (Wafer, Glass Substrate Based)	340
10.4.2	Solar Tools	342
10.4.3	Continuous (Roll-to-Roll)	343
10.4.4	Integration Approaches	344
10.4.5	Pick-and-Place	344

10.4.6 Monolithic Fabrication	345
10.4.7 Hybrid Integration	345
10.5 Future Direction	345
10.5.1 Portable/Mobile Electronics Examples	346
10.5.2 Space Power Systems	346
10.5.3 3DIC, Hybrid Microsystems Integration for High Functionality, Distributed Systems	346
References	347
Index	349
