 PART I HUMAN EXPERIENCES OF NATURE		
2	Domestic Nature: Cohabiting with Animals and Plants	17
	Animals in the home	17
	History and variations in pet-keeping	18
	Relationships with pets	19
	Health and well-being effects of domestic animals	23
	Social effects of companion animals	25
	Robotic animals	27
	Connections with nature	28
	Plants in the domestic sphere	29
	Effects of indoor plants	29
	Window views of nature	31

Plant-facilitated therapy	31
Experience and effects of gardening	32
Conclusion	34
References	35

3 **Managed Nature: Zoos, Aquariums, and Public Parks** **41**

Zoos and aquariums	42
Reasons for visiting	43
Visitors' experience of the zoo	45
Impact on environmental knowledge and concern	46
Maximizing the experience	48
Urban parks and green spaces	50
Parks and human well-being	52
Children and green space	53
Conclusion	55
References	55

4 **Wild Nature: Encounters with Wilderness** **60**

Defining wild nature and wilderness	60
Wilderness use and wilderness values	62
Wilderness solitude	64
Natural forces and features	66
Wildfire	67
Natural disasters	67
Wild animals: attitudes and experience	69
The edge of control: wilderness remoteness and challenge	73
Activity in wild nature, connection, and caring	76
Wild nature and spiritual experience	78
Wilderness-based growth and therapeutic programs	81
Conclusion	82
References	83

PART II THINKING ABOUT NATURE

5 **Attitudes, Values, and Perceptions** **93**

Core understandings of nature	93
Values	94
Attitudes	98
Perceptions	101
Evolutionary perspectives	104
Conclusion	109
References	109

6 **Perceptions of Environmental Problems** **114**

Risk perception	114
-----------------	-----

Biases in information processing	118
Language and discourse	120
Understanding environmental problems	121
Attributions of responsibility	124
Linking perceptions to behavior	125
Conclusion	126
References	127

7 Moral Psychology and the Environment 130

Background on ethical concepts	130
Social intuitionism and moral foundations theory	131
A virtue ethics of the environment	134
The deontic tradition and psychological research	141
Contextual differences in moral duties	145
Consequentialism, emotion, and socialization	147
Psychological dynamics of moral functioning	151
Pragmatist ethics	154
Conclusion	156
References	156

8 Environment and Identity 163

The concept of identity	163
Identity development	164
Developing an affiliation with nature	166
Environmental identity	167
Ecopsychology and depth psychology perspectives	169
Measuring environmental identity	170
Place identity	171
Animals and identity	174
Environmental social identity	175
Identity and behavior	177
Putting identity to work	179
Conclusion	181
References	182

PART III ENCOURAGING A SUSTAINABLE RELATIONSHIP BETWEEN HUMANS AND NATURE

9 Promoting Sustainable Behavior 191

Identifying target behaviors	191
Influences on behavior	193
External factors	193
Internal factors	198
Models for changing behavior	204
Collective behavior	206

Conclusion	208
References	208

10	Community Psychology and International Biodiversity Conservation	212
	International biodiversity conservation	213
	Common pool resources and models of governance	214
	New conceptions of the commons	216
	Social capital and its limitations	220
	Psychology, culture, and local knowledge	222
	Creating ecological knowledge old and new: Traditional and modern citizen science	225
	Accounting for the costs and benefits of conservation	228
	Psychological costs of displacing populations for conservation	230
	Conservation and all-too-human psychology	232
	Psychological biases and emotion	232
	Illegal trade in threatened and endangered species	233
	Conservation, environmental threats, and conflict	235
	Conclusion	236
	References	237
11	Environmental Education	241
	Environmental education	242
	The need for environmental education	244
	Examples of contemporary environmental education	246
	Education for Sustainable Development (ESD)	246
	Classroom-based environmental education	247
	Place-based education	248
	Programs focused on biodiversity	250
	Psychological foundations of environmental education	251
	Cognitive development, ecology, and environmental knowledge	252
	Affective factors and EE	253
	Socialization	256
	Action, participation, and problem solving	257
	Lessons for effective practice	260
	Conclusion	261
	References	261
12	The Positive Psychology of Conservation	268
	Nature as a positive environment	269
	Negative emotions in response to environmental challenges	273
	Positive emotions in relation to environmental behaviors	275
	Eudaimonism and meaning	277
	Materialistic values versus self-determination theory	279
	Optimism and pessimism	283

Self-regulation and expectancies of outcomes	283
Explanatory style	284
Cognitive strategies	285
Optimistic and pessimistic biases in environmental issues	286
Toward strengths-based approaches	286
Human virtue and character strengths	288
Other-praising emotions and positive moral psychology	289
Engagement and creativity	291
Mindfulness	293
Collective flourishing	294
References	296
Glossary	305
Index	311
