

# DETAILED CONTENTS

About the Authors xvii

Preface xviii

## **Chapter 1** Introduction: Ecology, Evolution, and the Scientific Method 1

*Searching for Life at the Bottom of the Ocean* 1

**Ecological systems exist in a hierarchy of organization** 3

Individuals 3

Populations and Species 3

Communities 5

Ecosystems 5

The Biosphere 6

Studying Ecology at Different Levels of Organization 6

**Ecological systems are governed by physical and biological principles** 8

Conservation of Matter and Energy 8

Dynamic Steady States 8

Evolution 9

**Different organisms play diverse roles in ecological systems** 10

Broad Evolutionary Patterns 10

Categorizing Species Based on Sources of Energy 15

Types of Species Interactions 15

Habitat versus Niche 17

**Scientists use several approaches to studying ecology** 20

Observations, Hypotheses, and Predictions 20

Testing Hypotheses with Manipulative Experiments 21

Alternative Approaches to Manipulative Experiments 23

### **ANALYZING ECOLOGY**

*Why Do We Calculate Means and Variances?* 24

**Humans influence ecological systems** 26

The Role of Ecologists 27

### **ECOLOGY TODAY: CONNECTING THE CONCEPTS**

The California Sea Otter 28

## **PART I LIFE AND THE PHYSICAL ENVIRONMENT**

### **Chapter 2** Adaptations to Aquatic Environments 32

*The Evolution of Whales* 33

**Water has many properties favorable to life** 34

Thermal Properties of Water 34

Density and Viscosity of Water 35

Dissolved Inorganic Nutrients 36

**Animals and plants face the challenge of water and salt balance** 40

Salt Balance in Aquatic Animals 40

Adaptations in Freshwater Animals 41

Adaptations in Saltwater Animals 42

Salt Balance in Aquatic Plants 43

### **ANALYZING ECOLOGY**

*Standard Deviation and Standard Error* 44

**The uptake of gases from water is limited by diffusion** 45

Carbon Dioxide 45

Oxygen 47

**Temperature limits the occurrence of aquatic life** 49

Heat and Biological Molecules 49

Cold Temperatures and Freezing 50

Thermal Optima 51

### **ECOLOGY TODAY: CONNECTING THE CONCEPTS**

The Decline of Coral Reefs 52

### **GRAPHING THE DATA**

Determining  $Q_{10}$  Values in Salmon 55

## Chapter 3 Adaptations to Terrestrial Environments

### The Evolution of Camels

#### Most terrestrial plants obtain nutrients and water from the soil

Soil Nutrients	58
Soil Structure and Water-Holding Capacity	58
Osmotic Pressure and Water Uptake	60
Transpiration and the Cohesion-Tension Theory	62

#### Sunlight provides the energy for photosynthesis

Available and Absorbed Solar Energy	64
Photosynthesis	66
Structural Adaptations to Water Stress	71

#### Terrestrial environments pose a challenge for animals to balance water, salt, and nitrogen

Water and Salt Balance in Animals	72
-----------------------------------	----

#### ANALYZING ECOLOGY

##### Different Types of Variables

Water and Nitrogen Balance in Animals	74
---------------------------------------	----

#### Adaptations to different temperatures allow terrestrial life to exist around the planet

Sources of Heat Gain and Loss	75
Body Size and Thermal Inertia	77
Thermoregulation	77
Ectotherms	77
Endotherms	78
Adaptations of the Circulatory System	79

#### ECOLOGY TODAY: CONNECTING THE CONCEPTS

The Challenge of Growing Cotton	80
---------------------------------	----

#### GRAPHING THE DATA

Relating Mass to Surface Area and Volume	83
--	----

## Chapter 4 Adaptations to Variable Environments

### The Fine-Tuned Phenotypes of Frogs

#### Ecological systems and processes vary in time and space

Temporal Variation	87
Spatial Variation	87
Correlation of Spatial and Temporal Dimensions	88

#### Environmental variation favors the evolution of variable phenotypes

Phenotypic Tradeoffs	89
Environmental Cues	91
Response Speed and Reversibility	91

#### Many organisms have evolved adaptations to variation in enemies, competitors, and mates

Enemies	92
Competition for Scarce Resources	93
Mates	94

#### Many organisms have evolved adaptations to variable abiotic conditions

Temperature	95
Water Availability	97
Salinity	98
Oxygen	98

#### Migration, storage, and dormancy are strategies to survive extreme environmental variation

Migration	99
Storage	100
Dormancy	100

#### ANALYZING ECOLOGY

##### Correlations

Adaptations to Prevent Freezing	102
---------------------------------	-----

#### Variation in food quality and quantity is the basis of optimal foraging theory

Central Place Foraging	104
Risk-Sensitive Foraging	105
Optimal Diet Composition	107
Diet Mixing	107

#### ECOLOGY TODAY: CONNECTING THE CONCEPTS

Responding to Novel Environmental Variation	108
---	-----

#### GRAPHING THE DATA

The Foraging Behavior of American Robins	11
--	----

## Chapter 5 Climates and Soils

### Where Does Your Garden Grow?

#### Earth is warmed by the greenhouse effect

The Greenhouse Effect	114
Greenhouse Gases	115

<b>There is an unequal heating of Earth by the Sun</b>	<b>116</b>	Boreal Forests	142
The Path and Angle of the Sun	116	Temperate Rainforests	143
Seasonal Heating of Earth	117	Temperate Seasonal Forests	144
<b>ANALYZING ECOLOGY</b>		Woodlands/Shrublands	145
Regressions	118	Temperate Grasslands/Cold Deserts	145
<b>The unequal heating of Earth drives air currents in the atmosphere</b>	<b>119</b>	Tropical Rainforests	146
Properties of Air	119	Tropical Seasonal Forests/Savannas	147
Formation of Atmospheric Convection Currents	120	Subtropical Deserts	148
Earth's Rotation and the Coriolis Effect	122	<b>Aquatic biomes are categorized by their flow, depth, and salinity</b>	<b>148</b>
<b>Ocean currents also affect the distribution of climates</b>	<b>123</b>	Streams and Rivers	148
Gyres	124	Ponds and Lakes	149
Upwelling	125	Freshwater Wetlands	152
The El Niño–Southern Oscillation	125	Salt Marshes/Estuaries	153
Thermohaline Circulation	126	Mangrove Swamps	153
<b>Smaller-scale geographic features can affect regional and local climates</b>	<b>127</b>	Intertidal Zones	154
Continental Land Area	127	Coral Reefs	154
Proximity to Coasts	127	The Open Ocean	154
Rain Shadows	128	<b>ECOLOGY TODAY: CONNECTING THE CONCEPTS</b>	
<b>Climate and the underlying bedrock interact to create a diversity of soils</b>	<b>129</b>	Changing Biome Boundaries	156
Soil Formation	129	<b>GRAPHING THE DATA</b>	
Weathering	130	Building Bar Graphs	159
<b>ECOLOGY TODAY: CONNECTING THE CONCEPTS</b>			
Global Climate Change	133		
<b>GRAPHING THE DATA</b>			
Creating a Climate Diagram	135		
<b>Chapter 6 Terrestrial and Aquatic Biomes</b>	<b>136</b>		
<b>The World of Wine</b>	<b>137</b>		
<b>Terrestrial biomes are categorized by their major plant growth forms</b>	<b>138</b>		
Climate Diagrams	140		
<b>ANALYZING ECOLOGY</b>			
Mean, Median, and Mode	141		
<b>There are nine categories of terrestrial biomes</b>	<b>141</b>		
Tundras	142		
		<b>PART II ORGANISMS</b>	
		<b>Chapter 7 Evolution and Adaptation</b>	<b>160</b>
		<b>Darwin's Finches</b>	<b>161</b>
		<b>The process of evolution depends on genetic variation</b>	<b>162</b>
		The Structure of DNA	162
		Genes and Alleles	162
		Dominant and Recessive Alleles	163
		Sources of Genetic Variation	164
		<b>Evolution can occur through random processes or through selection</b>	<b>165</b>
		Evolution Through Random Processes	166
		Evolution Through Selection	169
		<b>ANALYZING ECOLOGY</b>	
		Strength of Selection, Heritability, and Response to Selection	172

<b>Microevolution operates at the population level</b>	<b>173</b>
Artificial Selection	173
Natural Selection	174

<b>Macroevolution operates at the species level and higher levels of taxonomic organization</b>	<b>176</b>
---	------------

Phylogenetic Trees	177
Allopatric Speciation	178
Sympatric Speciation	178
Key Innovations	180

#### ECOLOGY TODAY: CONNECTING THE CONCEPTS

Drug-Resistant Tuberculosis	181
-----------------------------	-----

#### GRAPHING THE DATA

Natural Selection on Finch Beaks	183
----------------------------------	-----

### Chapter 8 Life Histories 184

<i>Live, Breed, and Die</i>	<b>185</b>
-----------------------------	------------

<b>Life history traits represent the schedule of an organism's life</b>	<b>186</b>
---	------------

The Slow-to-Fast Life History Continuum	186
Combinations of Life History Traits in Plants	187

<b>Life history traits are shaped by trade-offs</b>	<b>189</b>
---	------------

The Principle of Allocation	189
Offspring Number versus Offspring Size	189

#### ANALYZING ECOLOGY

<b>Coefficients of Determination</b>	<b>190</b>
Offspring Number versus Parental Care	191
Fecundity and Parental Care versus Parental Survival	192
Growth versus Age of Sexual Maturity and Life Span	193

<b>Organisms differ in the number of times that they reproduce, but they eventually become senescent</b>	<b>195</b>
--	------------

Semelparity and Iteroparity	195
Senescence	197

<b>Life histories are sensitive to environmental conditions</b>	<b>198</b>
---	------------

Stimuli for Change	198
The Effects of Resources	199
Effects of Predation	200
Effects of Global Warming	200

#### ECOLOGY TODAY: CONNECTING THE CONCEPTS

Selecting On Life Histories With Commercial Fishing	203
---	-----

#### GRAPHING THE DATA

Lizard Offspring Number versus Offspring Mass	205
---	-----

### Chapter 9 Reproductive Strategies 206

<i>The Sex Life of Honeybees</i>	<b>207</b>
----------------------------------	------------

<b>Reproduction can be sexual or asexual</b>	<b>208</b>
--	------------

Sexual Reproduction	208
Asexual Reproduction	208
Costs of Sexual Reproduction	210
Benefits of Sexual Reproduction	211

<b>Organisms can evolve as separate sexes or as hermaphrodites</b>	<b>213</b>
--	------------

Comparing Strategies	215
Selfing versus Outcrossing of Hermaphrodites	216
Mixed Mating Strategies	216

<b>Sex ratios of offspring are typically balanced, but they can be modified by natural selection</b>	<b>216</b>
--	------------

Mechanisms of Sex Determination	216
Offspring Sex Ratio	218

#### ANALYZING ECOLOGY

Frequency-Dependent Selection	219
-------------------------------	-----

<b>Mating systems describe the pattern of mating between males and females</b>	<b>220</b>
--	------------

Promiscuity	221
Polygamy	221
Monogamy	222

<b>Sexual selection favors traits that facilitate reproduction</b>	<b>223</b>
--	------------

Sexual Dimorphism	223
The Evolution of Female Choice	224
Runaway Sexual Selection	225
The Handicap Principle	226
Sexual Conflict	226

#### ECOLOGY TODAY: CONNECTING THE CONCEPTS

Male-hating Microbes	227
----------------------	-----

#### GRAPHING THE DATA

Frequency-Dependent Selection	229
-------------------------------	-----

## Chapter 10 Social Behaviors 230

### *The Life of a Fungus Farmer* 231

### Living in groups has costs and benefits 232

Benefits of Living in Groups 233

Costs of Living in Groups 234

Territories 235

Dominance Hierarchies 236

### There are many types of social interactions 236

The Types of Social Interactions 236

Altruism and Kin Selection 237

### ANALYZING ECOLOGY

Calculating Inclusive Fitness 239

### Eusocial species take social interactions to the extreme 240

Eusociality in Ants, Bees, and Wasps 240

Eusociality in Other Species 242

The Origins of Eusociality 242

### ECOLOGY TODAY: CONNECTING THE CONCEPTS

Hen-Pecked Chickens 243

### GRAPHING THE DATA

How Living In Groups Affects Predation Risk 245

## PART III POPULATIONS

## Chapter 11 Population Distributions 246

### *Bringing Back the Mountain Boomer* 247

### The distribution of populations is limited to ecologically suitable habitats 249

Determining Suitable Habitats 249

Ecological Niche Modeling 250

Habitat Suitability and Global Warming 252

### Population distributions have five important characteristics 253

Geographic Range 254

Abundance 254

Density 254

Dispersion 255

Dispersal 256

### The distribution properties of populations can be estimated 256

Quantifying the Location and Number of Individuals 256

### ANALYZING ECOLOGY

Mark-Recapture Surveys 258

Quantifying the Dispersal of Individuals 258

### Population abundance and density are related to geographic range and adult body size 259

Population Abundance and Geographic Range 260

Population Density and Adult Body Size 260

### Dispersal is essential to colonizing new areas 261

Dispersal Limitation 261

Habitat Corridors 261

### Many populations live in distinct patches of habitat 263

The Ideal Free Distribution Among Habitats 263

Conceptual Models of Spatial Structure 265

### ECOLOGY TODAY: CONNECTING THE CONCEPTS

The Invasion of the Emerald Ash Borer 267

### GRAPHING THE DATA

An Ideal Free Distribution 269

## Chapter 12 Population Growth and Regulation 270

### *The Human Population Explosion* 271

### Under ideal conditions, populations can grow rapidly 272

The Exponential Growth Model 272

The Geometric Growth Model 273

Comparing the Exponential and Geometric Growth Models 274

Population Doubling Time 275

### Populations have growth limits 276

Density-Independent Factors 276

Density-Dependent Factors 277

Positive Density Dependence 278

The Logistic Growth Model 281

Predicting Human Population Growth with the Logistic Equation 283

**Population growth rate is influenced by the proportions of individuals in different age, size, and life history classes** 283

Age Structure	283
Survivorship Curves	285
Life Tables	285
Collecting Data for Life Tables	288

#### ANALYZING ECOLOGY

Calculating Life Table Values 289

#### ECOLOGY TODAY: CONNECTING THE CONCEPTS

Saving The Sea Turtles 291

#### GRAPHING THE DATA

Survivorship Curves 293

### Chapter 13 Population Dynamics over Space and Time 294

**Monitoring Moose in Michigan** 295

**Populations fluctuate naturally over time** 296

Age Structure Fluctuations	297
Overshoots and Die-offs	298
Cyclic Population Fluctuations	300

**Density dependence with time delays can cause populations to be inherently cyclic** 300

The Inherent Cycling Behavior of Populations	300
Delayed Density Dependence	301

#### ANALYZING ECOLOGY

Delayed Density Dependence in the Flixweed 303

Cycles in Laboratory Populations	303
----------------------------------	-----

**Chance events can cause small populations to go extinct** 305

Extinction in Small Populations	306
Extinction Due to Variation in Population Growth Rates	307

**Metapopulations are composed of subpopulations that can experience independent population dynamics across space** 308

The Fragmented Nature of Habitats	308
The Basic Model of Metapopulation Dynamics	309
Observing Metapopulation Dynamics in Nature	310
The Importance of Patch Size and Patch Isolation	310

#### ECOLOGY TODAY: CONNECTING THE CONCEPTS

The Recovery of the Black-footed Ferret 313

#### GRAPHING THE DATA

Exploring the Equilibrium of the Basic Metapopulation Model 315

## PART IV SPECIES INTERACTIONS

### Chapter 14 Predation and Herbivory 316

**A Century-long Mystery of the Lynx and the Hare** 317

**Predators and herbivores can limit the abundance of populations** 319

Predators	319
Mesopredators	320
Herbivores	321

**Populations of consumers and consumed populations fluctuate in regular cycles** 323

Creating Predator-Prey Cycles in the Laboratory	324
Mathematical Models of Predator-Prey Cycles	325
Functional and Numerical Responses	328

**Predation and herbivory favor the evolution of defenses** 331

Defenses Against Predators	331
Defenses Against Herbivores	336

#### ANALYZING ECOLOGY

Understanding Statistical Significance 337

#### ECOLOGY TODAY: CONNECTING THE CONCEPTS

The Trouble with Cats and Rabbits 339

#### GRAPHING THE DATA

The Functional Response of Wolves 341

### Chapter 15 Parasitism and Infectious Diseases 342

**The Life of Zombies** 343

**Many different types of parasites affect the abundance of host species** 345

Ectoparasites	346
---------------	-----

Endoparasites	347	<b>Competition can occur through exploitation or direct interference, or it may be apparent competition</b>	<b>381</b>
<b>Parasite and host dynamics are determined by the parasite's ability to infect the host</b>	<b>352</b>	Interference Competition:	
Mechanisms of Parasite Transmission	353	Aggressive Interactions	381
Modes of Entering the Host	354	Interference Competition: Allelopathy	382
Jumping Between Species	354	Apparent Competition	382
Reservoir Species	354	<b>ANALYZING ECOLOGY</b>	
The Host's Immune System	354	Chi-square Tests	385
<b>Parasite and host populations commonly fluctuate in regular cycles</b>	<b>354</b>	<b>ECOLOGY TODAY: CONNECTING THE CONCEPTS</b>	
Population Fluctuations in Nature	355	Finding the Forest in the Ferns	386
Modeling Parasite and Host Populations	356	<b>GRAPHING THE DATA</b>	
<b>Parasites have evolved offensive strategies while hosts have evolved defensive strategies</b>	<b>358</b>	Competition for a Shared Resource	389
Parasite Adaptations	358	<b>Chapter 17 Mutualism</b>	<b>390</b>
Host Adaptations	359	<i>Living with Crabs</i>	<b>391</b>
<b>ANALYZING ECOLOGY</b>		<b>Mutualisms can improve the acquisition of water, nutrients, and places to live</b>	<b>392</b>
Comparing Two Groups with a t-Test	360	Acquisition of Resources in Plants	394
Coevolution	360	Acquisition of Resources in Animals	395
<b>ECOLOGY TODAY: CONNECTING THE CONCEPTS</b>		<b>Mutualisms can aid in defense against enemies</b>	<b>397</b>
Of Mice and Men...and Lyme Disease	362	Plant Defense	397
<b>GRAPHING THE DATA</b>		Animal Defense	398
Time Series Data	365	<b>Mutualisms can facilitate pollination and seed dispersal</b>	<b>400</b>
<b>Chapter 16 Competition</b>	<b>366</b>	Pollination	400
<i>The Complexity of Competition</i>	<b>367</b>	Seed Dispersal	401
<b>Competition occurs when individuals experience limited resources</b>	<b>368</b>	<b>Mutualisms can change when conditions change</b>	<b>402</b>
The Role of Resources	369	From Positive to Negative Interactions	402
The Competitive Exclusion Principle	372	Dealing with Cheaters	403
<b>The theory of competition is an extension of logistic growth models</b>	<b>374</b>	<b>Mutualisms can affect communities</b>	<b>403</b>
Competition for a Single Resource	374	Effects on Species Distributions	404
Competition for Multiple Resources	378	Effects on Communities	404
<b>The outcome of competition can be altered by abiotic conditions, disturbances, and interactions with other species</b>	<b>379</b>	<b>ANALYZING ECOLOGY</b>	
Abiotic Conditions	379	Comparing Two Groups That Do Not Have Normal Distributions	406
Disturbances	380	Effects on Ecosystem Function	407
Predation and Herbivory	380	<b>ECOLOGY TODAY: CONNECTING THE CONCEPTS</b>	
		Dealing with the Death of Dispersers	409
		<b>GRAPHING THE DATA</b>	
		Ecosystem Function of Fungi	411

## PART V COMMUNITIES AND ECOSYSTEMS

### Chapter 18 Community Structure 412

#### A Web of Interactions in Social Spiders 413

#### Communities can have distinct or gradual boundaries 414

Community Zonation 414

Categorizing Communities 416

Ecotones 416

Communities with Interdependent versus Independent Species Distributions 418

#### The diversity of a community incorporates both the number and relative abundance of species 420

Patterns of Abundance Among Species 420

Rank-Abundance Curves 421

#### ANALYZING ECOLOGY

#### Calculating Species Diversity 421

#### Species diversity is affected by resources, habitat diversity, keystone species, and disturbance 421

Resources 424

Habitat Diversity 426

Keystone Species 426

Disturbances 428

#### Communities are organized into food webs 430

Trophic Levels 430

Direct versus Indirect Effects 431

Top-down and Bottom-up Effects 434

#### Communities respond to disturbances with resistance, with resilience, or by switching among alternative stable states 435

Community Stability 435

Alternative Stable States 436

#### ECOLOGY TODAY: CONNECTING THE CONCEPTS

Lethal Effects of Pesticides at Nonlethal Concentrations 438

#### GRAPHING THE DATA

Log-Normal Distributions and Rank-Abundance Curves 441

### Chapter 19 Community Succession 442

#### Retreating Glaciers in Alaska 443

#### Succession occurs in a community when species replace each other over time 444

Observing Succession 445

Succession in Terrestrial Environments 447

Succession in Aquatic Environments 450

#### ANALYZING ECOLOGY

#### Quantifying Community Similarity 453

Change in Species Diversity 454

#### Succession can occur through different mechanisms 454

Traits of Early- versus Late-Succession Species 455

Facilitation, Inhibition, and Tolerance 456

Tests for the Mechanisms of Succession 457

#### Succession does not always produce a single climax community 459

Changes in Climax Communities over Time 459

Changes in Climax Communities over Space 460

Transient Climaxes 460

Creating Gaps in a Climax Community 461

Climax Communities Under Extreme Environmental Conditions 462

#### ECOLOGY TODAY: CONNECTING THE CONCEPTS

Promoting Succession on a Strip Mine 463

#### GRAPHING THE DATA

Species Richness at Glacier Bay 465

### Chapter 20 Movement of Energy in Ecosystems 466

#### Worming Your Way into an Ecosystem 467

#### Primary productivity provides energy to the ecosystem 468

Primary Productivity 468

Measuring Primary Productivity 470

Secondary Production 472

#### Net primary productivity differs among ecosystems 474

Primary Productivity Around the World 474

Drivers of Productivity in Terrestrial Ecosystems 474

Drivers of Productivity in Aquatic Ecosystems 476

<b>The movement of energy depends on the efficiency of energy flow</b>	<b>479</b>
Trophic Pyramids	479
The Efficiencies of Energy Transfers	481
<b>ANALYZING ECOLOGY</b>	
<b>Quantifying Trophic Efficiencies</b>	<b>484</b>
Residence Times	484
Stoichiometry	485
<b>ECOLOGY TODAY: CONNECTING THE CONCEPTS</b>	
<b>Feeding an Ocean of Whales</b>	<b>487</b>
<b>GRAPHING THE DATA</b>	
<b>NPP Versus the Total Primary Productivity of Ecosystems</b>	<b>489</b>
 <b>Chapter 21 Movement of Elements in Ecosystems</b>	
<b>Living in a Dead Zone</b>	<b>491</b>
<b>The hydrologic cycle moves many elements through ecosystems</b>	<b>493</b>
The Hydrologic Cycle	493
Human Impacts on the Hydrologic Cycle	494
<b>The carbon cycle is closely tied to the movement of energy</b>	<b>494</b>
The Carbon Cycle	494
Human Impacts on the Carbon Cycle	496
<b>Nitrogen cycles through ecosystems in many different forms</b>	<b>497</b>
The Nitrogen Cycle	497
Human Impacts on the Nitrogen Cycle	499
<b>The phosphorus cycle moves between land water</b>	<b>500</b>
The Phosphorus Cycle	500
Human Impacts on the Phosphorus Cycle	501
<b>In terrestrial ecosystems, most nutrients regenerate in the soil</b>	<b>501</b>
The Importance of Weathering	502
The Breakdown of Organic Matter	504
Decomposition Rates Among Terrestrial Ecosystems	506
<b>ANALYZING ECOLOGY</b>	
<b>Calculating Decomposition Rates of Leaves</b>	<b>507</b>
<b>In aquatic ecosystems, most nutrients regenerate in the sediments</b>	<b>507</b>

Allochthonous Inputs to Streams and Wetlands	508
Decomposition and Sedimentation in Rivers, Lakes, and Oceans	509
Stratification of Lakes and Oceans	509

#### ECOLOGY TODAY: CONNECTING THE CONCEPTS

Cycling Nutrients in New Hampshire	510
------------------------------------	-----

#### GRAPHING THE DATA

The Decomposition of Organic Matter	513
-------------------------------------	-----

## PART VI GLOBAL ECOLOGY

### Chapter 22 Landscape Ecology, Biogeography, and Global Biodiversity 514

<i>The Magnificent Biodiversity of the Cape Floristic Region</i>	<b>515</b>
--	------------

#### Landscape ecology examines ecological patterns and processes at large spatial scales 516

Causes of Habitat Heterogeneity	516
Relationships Between Habitat Heterogeneity and Species Diversity	518
Local and Regional Species Diversity	518

#### The number of species increases with area 519

Species-area Relationships	519
Habitat Fragmentation	521

#### ANALYZING ECOLOGY

<b>Estimating the Number of Species in an Area</b>	<b>522</b>
--	------------

#### The equilibrium theory of island biogeography incorporates both area and isolation 526

The Evidence	526
The Theory	527
Applying the Theory to the Design of Nature Reserves	529

#### On a global scale, biodiversity is highest near the equator and declines toward the poles 530

Patterns of Diversity	530
Processes that Underlie Patterns of Diversity	531

#### The distribution of species around the world is affected by Earth's history 534

Continental Drift	534
Biogeographic Regions	535
Historic Climate Change	536
