About the Authors	xv
Preface	xvii

## • CHAPTER 1

Overview	1
----------	---

## • CHAPTER 2

Mendel's Laws of Heredity	6
---------------------------	---

Mendel's First Law of Heredity	7
--------------------------------	---

<b>BOX 2.1</b> Gregor Mendel's Luck	8
-------------------------------------	---

Huntington Disease	10
--------------------	----

Phenylketonuria	11
-----------------	----

<b>BOX 2.2</b> How Do We Know That 1 in 50 People Are Carriers for PKU?	13
---	----

Mendel's Second Law of Heredity	14
---------------------------------	----

Summary	18
---------	----

## • CHAPTER 3

Beyond Mendel's Laws	20
----------------------	----

Genes on the X Chromosome	21
---------------------------	----

Other Exceptions to Mendel’s laws	23
New Mutations	23
Changes in Chromosomes	23
Expanded Triplet Repeats	25
Genomic Imprinting	26
Complex Traits	28
Schizophrenia	28
General Cognitive Ability	29
Pea Size	30
Multiple-Gene Inheritance	32
Quantitative Genetics	34
<b>BOX 3.1</b> Liability-Threshold Model of Disorders	36
Summary	38

• CHAPTER 4

<b>DNA: The Basis of Heredity</b>	<b>39</b>
DNA	39
<b>BOX 4.1</b> The “Central Dogma” of Molecular Genetics	44
Chromosomes	46
Summary	49

• CHAPTER 5

<b>Animal Models in Behavioral Genetics</b>	<b>50</b>
Quantitative Genetic Experiments to Investigate Animal Behavior	50
Selection Studies	52
Inbred Strain Studies	57
Animal Studies for Identifying Genes and Gene Functions	60
Creating Mutations	61
Quantitative Trait Loci	66
Synteny Homology	71
Summary	71

• CHAPTER 6

<b>Nature, Nurture, and Human Behavior</b>	<b>73</b>
Investigating the Genetics of Human Behavior	74
Adoption Designs	74

<b>BOX 6.1</b>	<b>The First Adoption Study of Schizophrenia</b>	<b>77</b>
<b>BOX 6.2</b>	<b>Issues in Adoption Studies</b>	<b>78</b>
	Twin Design	78
<b>BOX 6.3</b>	<b>The Twin Method</b>	<b>82</b>
	Combination	84
	Summary	85
•	<b>CHAPTER 7</b>	
	<b>Estimating Genetic and Environmental Influences</b>	<b>86</b>
	Heritability	86
	Interpreting Heritability	89
<b>BOX 7.1</b>	<b>Estimating Quantitative Genetic Parameters Directly from DNA</b>	<b>90</b>
	Environmentality	95
	Shared Environment	96
	Nonshared Environment	96
	Estimating Shared and Nonshared Environmental Influences	97
	Identifying Specific Nonshared Environment	98
	Identifying Specific Nonshared Environment That Predicts Behavioral Outcomes	100
	Multivariate Analysis	102
	Summary	103
•	<b>CHAPTER 8</b>	
	<b>The Interplay between Genes and Environment</b>	<b>105</b>
	Beyond Heritability	106
	Genotype-Environment Correlation	107
	The Nature of Nurture	108
	Three Types of Genotype-Environment Correlation	111
	Three Methods to Detect Genotype-Environment Correlation	112
	Implications	117
	Genotype-Environment Interaction	118
	Animal Models	120
	Adoption Studies	120

Twin Studies	122
DNA	123
Summary	126

## • CHAPTER 9

### Identifying Genes 128

Mutations	129
Detecting Polymorphisms	130

#### BOX 9.1 DNA Markers 132

Human Behavior	134
Linkage: Single-Gene Disorders	135
Linkage: Complex Disorders	137
Association: Candidate Genes	137

#### BOX 9.2 Affected Sib-Pair Linkage Design 138

Association: Genomewide	139
-------------------------	-----

#### BOX 9.3 SNP Microarrays 140

Summary	143
---------	-----

## • CHAPTER 10

### Pathways between Genes and Behavior 144

#### BOX 10.1 Levels of Analysis 145

Gene Expression and the Role of Epigenetics	146
The Transcriptome: Gene Expression throughout the Genome	149

Gene Expression Profiles: RNA Microarrays and Sequence-Based Approaches	149
---	-----

Genetical Genomics	151
--------------------	-----

Gene Expression as a Biological Basis for Environmental Influence	152
---	-----

The Proteome: Proteins Coded throughout the Transcriptome	153
---	-----

The Brain	155
-----------	-----

#### BOX 10.2 Endophenotypes 156

Learning and Memory	157
---------------------	-----

Emotion	160
Summary	162

## • CHAPTER 11

<b>Cognitive Disabilities</b>	<b>163</b>
General Cognitive Disability: Quantitative Genetics	164
General Cognitive Disability: Single-Gene Disorders	165
Phenylketonuria	165
Fragile X Syndrome	166
Rett Syndrome	168
Other Single-Gene Disorders	168
General Cognitive Disability: Chromosomal Abnormalities	170
Down Syndrome	170
Sex Chromosome Abnormalities	171
Specific Cognitive Disabilities	174
Reading Disability	175
<b>BOX 11.1 DF Extremes Analysis</b>	<b>176</b>
Communication Disorders	180
Mathematics Disability	181
Comorbidity among Specific Cognitive Disabilities	181
Dementia	181
Summary	183

## • CHAPTER 12

<b>General Cognitive Ability</b>	<b>186</b>
Historical Highlights	188
Animal Research	188
<b>BOX 12.1 Francis Galton</b>	<b>190</b>
Human Research	193
Overview of Genetic Research	194
Genetic Influence	194
Environmental Influence	196
Assortative Mating	197
Nonadditive Genetic Variance	198
Developmental Research	200
Does Heritability Change during Development?	200

Do Genetic Factors Contribute to Developmental Change?	204
Identifying Genes	206
Summary	209

• CHAPTER 13

<b>Specific Cognitive Abilities</b>	<b>210</b>
Broad Factors of Specific Cognitive Abilities	210
Multivariate Genetic Analysis	217
Information-Processing Measures	218
Working Memory Model	220
Imaging Genetics	220
School Achievement	222
Identifying Genes	228
Summary	229

• CHAPTER 14

<b>Schizophrenia</b>	<b>230</b>
Family Studies	231
<b>BOX 14.1</b> The Beginnings of Psychiatric Genetics: Bethlem Royal and Maudsley Hospitals	232
Twin Studies	234
Adoption Studies	236
Schizophrenia or Schizophrenias?	238
Identifying Genes	239
Summary	241

• CHAPTER 15

<b>Other Adult Psychopathology</b>	<b>242</b>
Mood Disorders	242
Family Studies	243
Twin Studies	245
Adoption Studies	246
Identifying Genes	247

Anxiety Disorders	248
Other Disorders	250
Co-Occurrence of Disorders	252
Identifying Genes	255
Summary	256

## • CHAPTER 16

<b>Developmental Psychopathology</b>	<b>257</b>
Autism	258
Family and Twin Studies	258
Identifying Genes	260
Attention-Deficit and Disruptive Behavior Disorders	261
Twin Studies	262
Identifying Genes	265
Anxiety Disorders	266
Other Disorders	268
Overview of Twin Studies of Childhood Disorders	270
Summary	270

## • CHAPTER 17

<b>Personality and Personality Disorders</b>	<b>273</b>
Self-Report Questionnaires	274
Other Measures of Personality	277
Other Findings	279
Situations	279
Development	279
Nature-Nurture Interplay	280
Personality and Social Psychology	280
Relationships	281
Self-Esteem	283
Attitudes and Interests	284
Behavioral Economics	285
Personality Disorders	285
Schizotypal Personality Disorder	287
Obsessive-Compulsive Personality Disorder	288
Antisocial Personality Disorder and Criminal Behavior	288
Identifying Genes	292
Summary	295

## • CHAPTER 18

<b>Substance Use Disorders</b>	<b>297</b>
Alcohol Dependence	297
Twin and Adoption Research on Alcohol-Related Phenotypes	297
Animal Research on Alcohol-Related Phenotypes	299
Molecular Genetic Research on Alcohol-Related Phenotypes	302
Nicotine Dependence	306
Twin Research on Smoking-Related Phenotypes	307
Molecular Genetic Research on Smoking-Related Phenotypes	309
Other Drugs	311
Complexities of Studying the Genetics of Substance Use	312
Summary	313

## • CHAPTER 19

<b>Health Psychology and Aging</b>	<b>314</b>
Health Psychology	314
Body Weight and Obesity	315
Subjective Well-Being and Health	322
Psychology and Aging	323
Health Psychology and Genetic Counseling	327
<b>BOX 19.1 Genetic Counseling</b>	<b>328</b>
Summary	329

## • CHAPTER 20

<b>Evolution and Behavior</b>	<b>330</b>
Charles Darwin	330
Inclusive Fitness	334
Population Genetics	336
Evolutionary Genomics	338
Evolutionary Psychology	339
Instincts	340
Empirical Evidence	341
<b>BOX 20.1 Mate Preference and the Major Histocompatibility Complex</b>	<b>342</b>

<b>BOX 20.2</b> Mate Selection for Facial Characteristics	344
Summary	346
• <b>CHAPTER 21</b>	
<b>The Future of Behavioral Genetics</b>	<b>348</b>
Quantitative Genetics	348
Molecular Genetics	352
Implications of Nature and Nurture	354
• <b>APPENDIX</b>	
<b>Statistical Methods in Behavioral Genetics</b>	<b>357</b>
1 Introduction	357
<b>BOX A.1</b> Behavioral Genetic Interactive Modules	358
<b>About the Author</b>	359
1.1 Variation and Covariation: Statistical Descriptions of Individual Differences	360
2 Quantitative Genetics	373
2.1 The Biometric Model	373
2.2 Estimating Variance Components	378
3 Molecular Genetics	402
3.1 Linkage Analysis	403
3.2 Association Analysis	406
Web Sites	413
Glossary	415
References	425
Name Index	NI-1
Subject Index	SI-1
