Preface	xi
1. THE PETRI NET MODEL	1
1 Discrete event systems	1
2 Notation	4
3 Order theoretical preliminaries	5
3.1 Partially ordered sets	6
3.2 Lattices	6
3.3 Up- and down-sets	7
4 Petri net definition	8
5 Petri nets as discrete event system models	10
6 Reachable sets	12
7 Graphical representation	14
8 Reachability via subsets of transitions	18
9 Other concurrency assumptions	20
9.1 The no concurrency assumption	21
9.2 The concurrency assumption	23
10 A general Petri net definition	24
11 Notes and references	26
2. SUPERVISORY CONTROL	27
1 Control goal and architecture	27
2 Formal definition	29
3 Reachable sets under supervision	31
4 Maximally permissive control laws	32
4.1 Introduction	32
4.2 Definition	33
4.3 Construction	37
5 Specific control sets	38
5.1 Fine control	38

5.2	On/off control	42
6	Linear inequalities as a legal set	43
6.1	One linear inequality	43
6.2	Conjunctions of linear inequalities	47
7	Control design under the no concurrency assumption	50
8	Notes and references	52
3.	UNCONTROLLABLE EVENTS AND TRANSITIONS	53
1	Introduction	53
2	Supervisory control laws	57
3	Specific concurrency and control assumptions	60
4	Maximally permissive control laws	61
4.1	Permissive control laws	61
4.2	Optimality	63
5	Control design	63
6	The supremal controllable subset	64
7	Notes and references	68
4.	REDUCTION THEOREMS	69
1	Intuition for \mathcal{A}^*	69
2	Invariance properties of the legal set	72
3	Sets of places and transitions	75
4	Reduction result for \mathcal{A}^*	82
4.1	Reduction theorem	82
4.2	Consequences and discussion	87
4.3	Further extensions	90
5	Reduction of the control design	91
5.1	An intuitive example	92
5.2	Sets of controllable transitions	93
5.3	Reduction theorem for control design	94
6	Structural and invariance properties of the legal set	98
6.1	Up- and down-sets in (\mathbb{N}^n, \leq)	98
6.2	One linear inequality	100
6.3	Unions of linear inequalities	102
7	Notes and references	108
5.	ACYCLIC PETRI NETS	109
1	Partitioning of the sets of places and transitions	110
2	Structure of the incidence matrices	112
3	Reachability in acyclic Petri nets	114
3.1	Transition bag assumption	114
3.2	Other concurrency assumptions	118
4	A reachability algorithm	119

5	Acyclic Petri nets free of choice places	121
6	Construction of the supremal controllable subset	124
7	Notes and references	127
6.	DECOMPOSITION OF THE CONTROL DESIGN	129
1	Introduction	129
2	Unions of legal sets	131
3	Auxiliary results	133
4	Proof of Theorem 6.1	135
5	Discussion	141
6	Control design	143
7	Notes and references	147
7.	CONTINUOUS VERSUS DISCRETE EVENTS	149
1	Continuous Petri nets	149
1.1	Definition	149
1.2	Reachability	150
1.3	Acyclic continuous Petri nets	151
2	A subset of the supremal controllable subset	152
2.1	The approach	152
2.2	Construction of $\tilde{\mathcal{A}}^*$	153
2.3	Presence of source transitions	158
3	Construction of the supremal controllable subset	159
3.1	Auxiliary lemmas	159
3.2	Discussion	160
4	No synchronising transitions in $\mathcal{N}_{\mathcal{A}}^{\text{uc}}$	164
5	No choice places in $\mathcal{N}_{\mathcal{A}}^{\text{uc}}$	169
6	A third class	171
7	Structure of \mathcal{A}^*	173
8	Notes and references	174
8.	STRUCTURAL LINEAR ALGEBRAIC CONTROL DESIGN	175
1	Unobservable events	175
2	Overview of the approach	176
3	Intersection of a linear halfspace with the first orthant	178
4	Candidate sets $\mathcal{A}'_{\mathbb{Q}}$	180
4.1	The case $\mathbf{A} \geq \mathbf{0}$	181
4.2	The case $\mathbf{A} \leq \mathbf{0}$	184
5	Maximal sets $\mathcal{A}'_{\mathbb{Q}}$	185
6	Reduction of controllers with disjunctions	186
7	A subset of the supremal controllable subset	189
8	Notes and references	190

193	References
197	Index
197	ACYCLIC PETRI NETS
197	1. Candidate sets A_0
197	2. The case $A \leq 0$
197	3. The case $A \geq 0$
197	4. Maximal sets A_0
197	5. Reduction of control with halting
197	6. A subset of the supremal controllable subsets
197	7. Notes and references
197	8. ACYCLIC PETRI NETS
197	1. Introduction
197	2. Union of level sets
197	3. Auxiliary results
197	4. Proof of Theorem 2.1
197	5. Discussion
197	6. Control design
197	7. Notes and references
197	8. CONTINUOUS VERSUS DISCRETE SYSTEMS
197	1. Continuous Petri nets
197	2. Definition
197	3. Reachability
197	4. Acyclic continuous Petri nets
197	5. A subset of the supremal controllable subsets
197	6. The approach
197	7. Construction of A_0 to be reduced conservatively
197	8. Presence of some applications
197	9. Construction of the supremal controllable subset
197	10. Auxiliary lemmas
197	11. Discussion
197	12. No synchronizing transition
197	13. No choice places in A_0
197	14. A third class
197	15. Structure of A_0 consistent with the reduction
197	16. Notes and references
197	17. STRUCTURAL LINEAR ALGEBRAIC CONTROL DESIGN
197	1. Unobservable events
197	2. Overview of the approach
197	3. Intersection of a linear hullspace with the first-order
197	4. Candidate sets A_0
197	5. The case $A \leq 0$
197	6. The case $A \geq 0$
197	7. Maximal sets A_0
197	8. Reduction of control with halting
197	9. A subset of the supremal controllable subsets
197	10. Notes and references
