

2.3	Bilinear Functions on a Single Space	24
2.4	Bilinear Forms	26
2.5	Sesquilinear Functions	27
2.6	Sesquilinear Forms and Endomorphisms	30
2.7	The Zeros of Hermitian Forms	31
2.8	Pairs of Hermitian Forms	33
2.9	Three Hermitian Forms	35
2.10	General Remarks on the Range of a Set of Forms	37
	Notes for Chapter 2	39

3. The Decomposition of Finite-Dimensional Endomorphisms

3.1	Ascent and Descent	40
3.2	The Case of Equal Ascent and Descent	43
3.3	Eigensubspaces and Root Subspaces	45
3.4	The Splitting Off of Root Subspaces	46
3.5	The Finite-Dimensional Case	47
3.6	Several Commuting Operators	50
3.7	The Hermitian Case	51
3.8	Orthogonality	53
3.9	Some Modifications	55
3.10	Reduction of Pairs of Hermitian Forms	57
	Notes for Chapter 3	59

4. The Tensor Product of Linear Spaces

4.1	Introduction	60
4.2	The Definition by Means of Functionals	61
4.3	Bases and Dimension	63
4.4	The Real and Complex Cases	66
4.5	Subspaces	67
4.6	Induced Homomorphisms	69
4.7	Exactness Properties	71
4.8	Universal Property	73
4.9	Bilinear Forms and Tensor Products	74
4.10	Products of Sesquilinear Forms	76
	Notes for Chapter 4	78

5. Tensor Products and Endomorphisms

5.1	Introduction	79
5.2	The Hermitian Case	80
5.3	Eigenvalues and Ranks	82
5.4	Decomposition	83
5.5	The Kronecker Sum and Product	84
5.6	Kronecker Sums and Eigenvalues	86
5.7	Separation of Variables	88

5.8	The Tensor Product of Identical Factors	89
5.9	Induced Maps of Symmetry Subspaces	91
	Notes for Chapter 5	92

Part 2 MULTIPARAMETER PROBLEMS FOR MATRICES

6. Simultaneous Equations in Linear Spaces

6.1	Introduction	97
6.2	Determinantal Maps	101
6.3	Singular Determinantal Maps in the Case $k = 2$	103
6.4	Rectangular Arrays	105
6.5	Definiteness Requirements	107
6.6	Solutions for Rectangular Arrays	108
6.7	Nonformal Determinantal Properties	110
6.8	Eigenvalues for a Rectangular Array	111
6.9	Decomposition	112
	Notes for Chapter 6	113

7. Simultaneous Eigenvalue Problems for Hermitian Matrices

7.1	Introduction	115
7.2	The First Definiteness Condition and Its Consequences	117
7.3	Orthogonality of Eigenvectors	119
7.4	Stronger Definiteness Conditions	121
7.5	Splitting of Multiple Eigenvalues	123
7.6	Decomposable Orthogonal Eigenvectors	127
7.7	A Connectedness Property	129
7.8	The Main Result on Positive Definiteness	132
7.9	The Eigenvector Expansion	133
	Notes for Chapter 7	135

8. The Singularity of Square Arrays

8.1	Introduction	136
8.2	Equivalent Singularity Conditions	137
8.3	An Algebraic Lemma	138
8.4	The Inductive Argument	140
8.5	Singularity and Decomposable Tensors	143
8.6	The Positive Definiteness Theorem Reproved	144
8.7	Eigenvalues and Singularity	145
	Notes for Chapter 8	146

9. Arrays of Hermitian Forms

9.1	Introduction	147
9.2	Two by Two Arrays	148

9.3	Two by Three Arrays	150
9.4	General Square Arrays	151
9.5	A Property of Convex Cones	153
9.6	The Case of Several Cones	159
9.7	Square Arrays of Hermitian Forms, Continued	161
9.8	Rectangular Arrays of Hermitian Forms	163
9.9	Relation between Definiteness Conditions I and II	168
	Notes for Chapter 9	171
 10. Completeness of Eigenvectors in the Locally Definite Case		
10.1	Introduction	172
10.2	Eigenvalues and Eigensubspaces	173
10.3	Eigenprojectors	175
10.4	Existence of a Nonsingular Determinantal Map	177
10.5	Completeness of the Eigenvectors	179
10.6	The Eigenvector Expansion	180
 11. Arrays of Compact Operators		
11.1	Introduction	181
11.2	Notions from Hilbert Space Theory	183
11.3	Discreteness of the Spectrum	184
11.4	Truncated Problems	187
11.5	Sequences of Truncations	188
11.6	Convergence of the Eigenvalues	189
11.7	Convergence of the Eigenvectors	190
11.8	Introduction of Tensor Products	192
11.9	Discussion of the Expansion	197
11.10	A Special Case	199
	Notes for Chapter 11	201
