Preface to the Third Edition	xi
Preface to the Second Edition.....	xiii
Preface to the First Edition.....	xv
Suggestions for the Instructor.....	xix
About the Author	xxi
1. The Nature of Differential Equations. Separable Equations	1
1 Introduction	1
2 General Remarks on Solutions.....	4
3 Families of Curves. Orthogonal Trajectories	11
4 Growth, Decay, Chemical Reactions, and Mixing.....	19
5 Falling Bodies and Other Motion Problems	31
6 The Brachistochrone. Fermat and the Bernoullis.....	40
Appendix A: Some Ideas From the Theory of Probability: The Normal Distribution Curve (or Bell Curve) and Its Differential Equation.....	51
2. First Order Equations	65
7 Homogeneous Equations	65
8 Exact Equations	69
9 Integrating Factors	74
10 Linear Equations	81
11 Reduction of Order	85
12 The Hanging Chain. Pursuit Curves	88
13 Simple Electric Circuits	95
3. Second Order Linear Equations.....	107
14 Introduction	107
15 The General Solution of the Homogeneous Equation	113
16 The Use of a Known Solution to find Another	119
17 The Homogeneous Equation with Constant Coefficients	122
18 The Method of Undetermined Coefficients	127
19 The Method of Variation of Parameters.....	133
20 Vibrations in Mechanical and Electrical Systems	136
21 Newton's Law of Gravitation and The Motion of the Planets	146
22 Higher Order Linear Equations. Coupled Harmonic Oscillators	155
23 Operator Methods for Finding Particular Solutions.....	161
Appendix A. Euler	170
Appendix B. Newton.....	179

4. Qualitative Properties of Solutions	187
24 Oscillations and the Sturm Separation Theorem	187
25 The Sturm Comparison Theorem	194
5. Power Series Solutions and Special Functions	197
26 Introduction. A Review of Power Series	197
27 Series Solutions of First Order Equations	206
28 Second Order Linear Equations. Ordinary Points	210
29 Regular Singular Points	219
30 Regular Singular Points (Continued)	229
31 Gauss's Hypergeometric Equation	236
32 The Point at Infinity	242
Appendix A. Two Convergence Proofs	246
Appendix B. Hermite Polynomials and Quantum Mechanics	250
Appendix C. Gauss	262
Appendix D. Chebyshev Polynomials and the Minimax Property	270
Appendix E. Riemann's Equation	278
6. Fourier Series and Orthogonal Functions	289
33 The Fourier Coefficients	289
34 The Problem of Convergence	301
35 Even and Odd Functions. Cosine and Sine Series	310
36 Extension to Arbitrary Intervals	319
37 Orthogonal Functions	325
38 The Mean Convergence of Fourier Series	336
Appendix A. A Pointwise Convergence Theorem	345
7. Partial Differential Equations and Boundary Value Problems	351
39 Introduction. Historical Remarks	351
40 Eigenvalues, Eigenfunctions, and the Vibrating String	355
41 The Heat Equation	366
42 The Dirichlet Problem for a Circle. Poisson's Integral	372
43 Sturm–Liouville Problems	379
Appendix A. The Existence of Eigenvalues and Eigenfunctions	388
8. Some Special Functions of Mathematical Physics	393
44 Legendre Polynomials	393
45 Properties of Legendre Polynomials	400
46 Bessel Functions. The Gamma Function	407
47 Properties of Bessel Functions	418
Appendix A. Legendre Polynomials and Potential Theory	427
Appendix B. Bessel Functions and the Vibrating Membrane	435
Appendix C. Additional Properties of Bessel Functions	441

9. Laplace Transforms	447
48 Introduction	447
49 A Few Remarks on the Theory	452
50 Applications to Differential Equations	457
51 Derivatives and Integrals of Laplace Transforms	463
52 Convolutions and Abel's Mechanical Problem.....	468
53 More about Convolutions. The Unit Step and Impulse Functions	475
Appendix A. Laplace.....	483
Appendix B. Abel.....	484
10. Systems of First Order Equations.....	487
54 General Remarks on Systems.....	487
55 Linear Systems.....	491
56 Homogeneous Linear Systems with Constant Coefficients.....	498
57 Nonlinear Systems. Volterra's Prey-Predator Equations	507
11. Nonlinear Equations.....	513
58 Autonomous Systems. The Phase Plane and Its Phenomena	513
59 Types of Critical Points. Stability	519
60 Critical Points and Stability for Linear Systems	529
61 Stability By Liapunov's Direct Method.....	541
62 Simple Critical Points of Nonlinear Systems	547
63 Nonlinear Mechanics. Conservative Systems.....	557
64 Periodic Solutions. The Poincaré–Bendixson Theorem.....	563
65 More about the van der Pol Equation.....	572
Appendix A. Poincaré	574
Appendix B. Proof of Liénard's Theorem	576
12. The Calculus of Variations	581
66 Introduction. Some Typical Problems of the Subject	581
67 Euler's Differential Equation for an Extremal	584
68 Isoperimetric Problems	595
Appendix A. Lagrange.....	606
Appendix B. Hamilton's Principle and Its Implications	608
13. The Existence and Uniqueness of Solutions.....	621
69 The Method of Successive Approximations.....	621
70 Picard's Theorem.....	626
71 Systems. The Second Order Linear Equation	638
14. Numerical Methods	643
By John S. Robertson	
72 Introduction	643

73	The Method of Euler.....	646
74	Errors	650
75	An Improvement to Euler	652
76	Higher Order Methods.....	657
77	Systems	661
Numerical Tables		667
Answers		681
Index.....		723
