

**Libor Beneš:**

<i>Introduction</i> .....	7
---------------------------	---

**1) Robert Ulewicz:**

<i>Conditions of steel castings quality production</i> .....	9
1.1 Forming technology .....	9
1.2 Characteristic of steel casting incompatibilities level and structure .....	10
1.3 Supervision of inconsistent product with requirements .....	12
1.4 Correcting operations .....	12
1.5 Summary .....	13
Literature .....	13

**2) Jacek Selejdak:**

<i>Steel resistance properties as assessment basis of metallurgic processes</i> .....	15
2.1 Rules of describing steel resistant properties .....	15
2.2 Researched steel properties .....	15
2.3 Assessment of steel stability properties .....	16
2.4 Cp and Cpk factors values .....	18
2.5 Analysis of processes qualitative ability on basis of product dimensional characteristic .....	19
2.6 Summary .....	20
Literature .....	20

**3) Joanna Rosak:**

<i>Testing the client/patient satisfaction of polish hospitals by the servqual metod</i> .....	21
3.1 Introduction .....	21
3.3 Characteristics of the test object and methodology of examinations .....	23
3.4 Results of examinations and their analysis .....	24
3.5 Summary .....	25
3.6 Literature .....	26

**4) Ewa Wszendybył:**

<i>Analysis of efficiency of hotels referred to their participation in trade contests</i> .....	27
4.1 Introduction .....	27
4.2 Efficiency of hotels .....	28
4.3 The formation of the GOPPAR coefficient in Polish hotels .....	29
4.4 Summary .....	31
Literature .....	32

**5) Jacek Selejdak - Rutkowski W.:**

<i>Analysis of metal products quality level</i> .....	33
5.1 Introduction .....	33
5.2 Quantitative analysis of incompatibilities occurring in railway rails production process .....	33
5.3 Use of FMEA method for assessment of risk of occurring incompatibilities in railway rails production process .....	35
5.4 Summary .....	37
Literature .....	37

**6) Czajkowska Agnieszka - Pietrzyk Małgorzata:**

<i>Improvement of the production process of items made of plastics</i> .....	39
6.1 The characterization of the investigative object .....	39
6.2 The structure of discrepancies referred to tyres collected in different periods of time .....	41
6.3 Improvement of the quality of tyres applied in baby carriages based on the degree of risk .....	42
6.4 Summary .....	43
Literature .....	44

<b>7) Biernat Andrzej - Jacek Selejdak:</b>	
<i>Assessment of quality level and improvement of continuous steel casting process</i> .....	45
7.1 Charge preparation for receiving steel.....	45
7.2 Steel qualitative problems analysis on basis of Ishikawa diagram.....	46
7.3 Quantification of slab mills spoilage cause .....	46
7.4 Assessment of slab mills incompatibilities causes on basis of FMEA Metod.....	48
7.5 Summary.....	49
Literature .....	50
<b>8) Joanna Rosak - Ciuk Wojciech:</b>	
<i>Organization of production and quality of electric eater</i> .....	51
8.1 Subject of examinations.....	51
8.2 Technological process of immersion heater production .....	52
8.3 Quality estimation of technological processes of immersion heaters production .....	54
8.3 Summary.....	56
Literature .....	56
<b>9) Ewa Wszendybyl - Remigiusz Czakwari:</b>	
<i>Quality of meat products</i> .....	57
9.1 Introduction .....	57
9.2 The manufacturing process of sausages and the structure of production of the investigative object58	
9.3 The structure of discrepancies referred to meat- products.....	60
9.4 Proposals of solution of productive and qualitative problems .....	61
9.5 Summary.....	62
Literature .....	62
<b>10) Jacek Selejdak - Wojciech Ciuk:</b>	
<i>Complaints as assessment of quality level of household equipment's parts and assembly</i> .....	63
10.1 Research subjekt.....	63
10.2 Identification of product complaint causes because of enamelled surfaces defects .....	64
10.3 Incompatibilities connected with particular kitchen elements.....	64
10.4 Structure of gas cooker inkompatibility .....	65
10.5 Projects for improving gas cooker duality.....	66
10.6 Summary.....	67
Literature .....	67
<b>11) Piotr Bojanowicz - Robert Ulewicz:</b>	
<i>Application of quality management instruments to assessment of binding materials producing problem</i> .....	69
11.1 Analysis of material streams during cement production .....	69
11.2 Identyfikacja obszarów powstawania niezgodności przy produkcji cementu .....	70
11.3 Incompatibilities structure during cement production .....	71
11.4 Quality problems quantification during cement production .....	72
11.5 Summary.....	73
Literature .....	74
<b>12) Libor Beneš:</b>	
<i>Contribution to a formation of the White - Etching Layer on the rail treads - part I</i> .....	75
12.1 Introduction .....	75
12.2 Formation of white etching layer on rail trend .....	76
Literature .....	79

<b>13) Libor Beneš:</b>	
<i>Contribution to a formation of the White - Etching Layer on the rail treads - part II</i> .....	81
13.1 Objectives and methodology .....	81
13.2 Experimental results and their discussion .....	81
13.3 Conclusions .....	85
Literature .....	85
<b>14) Libor Beneš - Věra Záhorová:</b>	
<i>Influence of dynamical loading, thermal effects and temperature generation in the railway wheel / rail contact region</i> .....	87
14.1 Introduction .....	87
14.2 Methodology of the realized research activities .....	88
14.3 Heat generation in the contact zone .....	89
14.4 Effect of operation conditions on railway wheel rolling contact fatigue .....	92
14.5 Conclusion .....	93
Literature .....	94
<b>15) Libor Beneš - Eva Schmidová:</b>	
<i>Tribological and materials aspects of the railway wheel / rail interaction</i> .....	95
15.1 Introduction .....	95
15.2 Contact fatigue microcracks and models of metal "pick-up" .....	96
15.3 Experiment, obtained results and their discussion .....	97
15.4 Conclusions .....	99
Literature .....	100
<b>16) Libor Beneš - Jaroslav Menčík:</b>	
<i>Formation of hard layers on railway wheel / rail head and their role in the surface deterioration</i> .....	101
16.1 Introduction .....	101
16.2 Generation of White Etching Layers on a rail head - a review .....	102
16.3 Analysis of thermal processes caused by sliding .....	104
16.4 Discussion .....	106
16.5 Conclusions .....	107
Literature .....	107
<b>17) Bohumil Culek jr - Bohumil Culek:</b>	
<i>Evaluation of fatigue lifetime of steel constructions</i> .....	109
17.1 Probabilistic metod .....	109
17.2 Simulation of the traffic loads .....	110
17.3 Probabilistic simulation of the Wöhler's curve .....	113
17.4 Statistical evaluation of partial damages and service life .....	114
17.5 Conclusion .....	114
Literature .....	114
<b>18) Radim Trojan:</b>	
<i>Deformační stárnutí nízkouhlikové oceli 12 013 v magnetickém poli</i> .....	115
18.1 Úvod .....	115
18.2 Vlastnosti použité oceli .....	116
18.3 Popis experimentu .....	116
18.4 Výsledky experimentu .....	117
18.5 Zhodnocení a závěr .....	120
Literatura .....	120

<b>19) Eva Schmidová - Antonín Kříž:</b>	
<i>Studium kumulativní plastické deformace ve spojení s poškozováním kontaktních ploch železničních kol</i> .....	121
19.1 Specifika provozní degradace železničních kol, zaměření prací.....	121
19.2 Výběr provedených materiálových analýz.....	122
19.3 Shrnutí poznatků.....	126
Literatura.....	126
<b>20) Eva Schmidová - Pavel Švanda:</b>	
<i>Vývoj vysocepevnostního materiálu kolejových komponent se zvýšeným provozním zatížením</i> ....	127
20.1 Oblast aplikace vyvíjené oceli.....	127
20.2 Současný stav vývoje v oblasti bainitických kolejnicových materiálů.....	128
20.3 Představení nové vývojové varianty bainitické lité oceli.....	129
20.4 Shrnutí.....	131
Literatura.....	131
<b>21) Libor Beneš - Rudolf Kaloč - Javier Guzmán Ballivián:</b>	
<i>Dynamické aspekty procesů v kontaktu kolo/kolejnice</i> .....	133
21.1 Úvod - tribologický pohled na soustavu kolo/kolejnice.....	133
21.2 Kontakt jako dynamický problém.....	134
21.3 Připravované zkušební zařízení.....	136
Literatura.....	138
<b>22) Michael Lata:</b>	
<i>The mathematical methods of dynamics applied to solution of wheel-set drive system dynamics</i> ..	139
22.1 Introduction.....	139
22.2 Building the equations of motion.....	140
22.3 Solution at time - Simulation calculations.....	141
22.3 Solution at frequency area.....	142
Literature.....	144
<i>Research Centrum of Railway Vehicles</i> .....	145
