

Contents

Introduction	6
1 Wearable low-profile tag antennas for radiofrequency identification of people.....	7
1.1 Dipole-type antennas.....	7
1.1.1 Multi-element folded dipoles	8
1.2 Patch-type antennas.....	9
1.2.1 Foam substrate patch antenna	9
1.2.2 Small dual-loop antenna loaded by a patch array backed by grounded dielectric slab.....	9
1.2.3 Slot-coupled dual-element shorted patches.....	10
2 Optimization and performance evaluation of RFID system for identification of people	12
2.1 System parameters.....	12
2.2 Propagation models and power budget	13
2.3 A novel gain enhanced reader antenna.....	14
2.4 Tuning of a tilt of the reader antennas	14
2.5 Influence of tilt of the TAG antenna.....	15
2.6 Influence of a person shadowing.....	15
2.7 Power budgets of the optimized RFID system.....	16
2.8 Identification of sportsmen	17
2.9 Evaluation of received signal strength and read range in open and indoor areas	18
2.10 Summary of radio identification of people in UHF band	20
Ing. Milan Polívka, Ph.D. - CV	22
