

# Contents

<b>1</b>	<b>Introduction</b>	<b>6</b>
1.1	What is mechanobiology . . . . .	6
1.2	Articular cartilage mechanobiology . . . . .	6
<b>2</b>	<b>Modelling cartilage mechanics</b>	<b>6</b>
<b>3</b>	<b>Clinical mechanobiology</b>	<b>9</b>
3.1	Joint reaction force . . . . .	10
3.2	Joint contact stress . . . . .	10
3.3	Adaptation for individual patient . . . . .	14
<b>4</b>	<b>Diagnosis – identification of primary mechanism of cartilage degeneration</b>	<b>14</b>
4.1	Study on dysplastic hips . . . . .	15
4.1.1	Stress level in dysplastic hips . . . . .	15
4.1.2	Parameter describing mechanobiological status of the hip . . . . .	15
4.1.3	Mechanobiological parameters and functional status of dysplastic hip . . . . .	17
4.2	Contact stress in hips subjected to aseptic necrosis of the femoral head . . . . .	17
4.3	Contact stress after incongruent reduction of acetabular fracture . . . . .	17
<b>5</b>	<b>Mechanobiologically supported therapy</b>	<b>18</b>
5.1	Osteotomies - alternative to total hip arthroplasty . . . .	18
<b>6</b>	<b>Design of appropriate rehabilitation</b>	<b>19</b>
6.1	Therapy after acetabular fractures . . . . .	19
6.2	Reducing fast motion in early rehabilitation . . . . .	20
6.3	Managing occupational activities . . . . .	20
<b>7</b>	<b>Conclusions</b>	<b>21</b>
