

Contents

1. Introduction.....	6
1.1 Motivation and approaches behind the development of fiber reinforced cementitious composites.....	6
1.2 Engineered cementitious composites.....	8
2. Multiscale framework for modeling of ECC materials	10
2.1 Relevant length scales.....	12
2.2 Scales linking.....	13
2.2.1 Spatial averaging.....	13
2.2.2 Finite element method.....	14
2.3 Analytical models on individual length scales.....	14
2.3.1 Microscale – crack initiation.....	14
2.3.2 Microscale – fiber-matrix interaction.....	15
2.3.3 Microscale – protruding fiber.....	17
2.3.4 Mesoscale I – fiber bridging.....	18
2.3.5 Mesoscale II – multiply-cracked material	19
2.3.5.1 Process of multiple cracking.....	19
2.3.5.2 Overall stress and strain.....	21
2.3.6 Macroscale - structural member.....	22
2.4 Validation and application.....	22
3. Multiscale characterization of PVA-ECC exposed to aggressive environment	23
3.1 Introduction	23
3.2 Material.....	23
3.3 Specimen fabrication	23
3.4 Accelerated ageing in aggressive environment.....	24
3.5 Testing methods.....	24
3.5.1 Three-point bending fracture tests.....	24
3.5.2 Single fiber pullout tests.....	25
3.5.3 Uniaxial tension tests	25
3.5.4 Uniaxial compression tests.....	26
3.6 Discussion of measured data	26
4. Concluding remarks and future outlook.....	28
5. Acknowledgements	30
6. References	30
Doc. Ing. Petr Kabele, Ph.D.....	34
