Introduction

In search of similarities between biological (BNN) and artificial (ANN) neuronal networks

1. Cybernetics and systems	13
2. Biological and general systems	13
3. The black box	14
4. Vectors as system inputs and outputs	14
5. Physiological and non-physiological BNN inputs and outputs	14
6. Conceptualisation	15
7. Black box formalisation	15
8. McCulloch's and Pitts's formal neuron	15
9. Similarities between physiological (PN – FN in Czech) and artificial neurons (AN)	15
10. The binary system.	16
11. PN and AN dissimilarities	16
12. PN structure	16
13. The neuronal surface membrane is an important FN organelle	16
14. Impulsation, standing potential formation	16
15. "Hardware" acceleration of interneuronal impulse conduction	17
16. Electric voltage on the PN membrane	17
17. "Standing" and "spiking" potentials in PN	17
18. Microanatomy of PN and its organelle	18
19. Digital-to-analog conversion on PN synapses	19
20. Memory phases in PN and BNN	19
21. Impulse coding and noise in BNN	19
22. Analog-to-digital conversion in the PN axon hillock	19
23. Micro- a macro-elektroencephalography (EEG).	20
24. Coding in AN	20

25. Formal record of AN function	20
26. Diagram of the McCulloch and Pitts perceptron (MCP)	21
27. Discovery of the thalamo-cortical reverberation system	21
28. Rosenblatt's perceptron (RP).	22
29. Diagram of Rosenblatt's perceptron (RP).	22
30. Functional structure of the RP	22
31. Functions of the retina and optic cortex	22
32. Functional structure of ADALINE	23
33. Structural diagram of ADALINE	23
34. Definition of MADELINE	24
35. Structural diagram of MADELINE	24
36. Functional structure of MADELINE	24
37. Principles of data processing in ANN	24
38. The majority principle in the process of learning	25
39. Problem solving in ANN by "mathematical" and psychological (learning) means	25
40. Problem solving or mentation and cognition in the BNN (brain)	25
41. Comparing input and output vectors	25
42. Analogy of psychological and ANN mechanisms	26
43. Vector and its space	26
44. Hamming's distance.	28
45. Hamming's equation	28
46. "Vectors" in BNN and detectors of outlines	28
47. Detectors of models	29
48. Euclidean distance	29
49. "Manhattan" distance.	30
50. Square distance	30
51. Binary vectors	31
52. Diagram of the comparison of two vectors	32
53. Logical propositions	32
54. Example for non-equivalence, XOR.	32
55. Two-argument functors	32
56. Messrs. Boole and Shannon	32
57. Two-argument functors and logic in grammar	33

58. Conjunction, Schaffer's functor, non-equivalence.....	33
59. "Supervised learning"	33
60. Iteration algorithms, eta and alpha coefficients	33
61. Iteration and oscillation in ANN and analogies in BNN	34
62. "Unsupervised learning"	34
63. Learning in BNN and ANN	34
64. "Training set"	34
65. Back-propagation type of ANN structure	34
66. Learning at school and in ANN	35
67. Learning process rating, "global error"	35
68. Local minimum	35
69. Graphically expressed course of global error	36
70. Energy function (E. function) – "error rate".	36
71. E. function in the hyperplane	36
72. Illustration of global and local minima in a 3D map	36
73. Another projection of the same map	37
74. E. function and psychology	38
75. Psychotests and positron emission tomography (PET)	38
76. Demonstration of a specific psychotest using PET	39
77. Vector of vector weight gains	39
78. Gradient negative value calculation	40
79. Hopfield network structure	40
80. Equation of Hopfield network E. function	41
81. Distinction between old and new weights (w) (engrams) in ANN	41
82. Graphic representation of the course of E. function	42
83. Diagram of back propagation (BP) network function	42
84. BP network structure	43
85. Sensorium structure in the sense of "static noogenesis"	44
86. States, types and parts of "static noogenesis"	44
87. ANN development	45
88. Application of ANN, prediction	45
89. Application of ANN, filtration, approximation	45
90. Application of ANN, classification, optimisation	46

91. Application of ANN, association	46
92. Mentation and problem situation	46
93. Mentation and focussed attention	47
94. Sechenov, mentation are unfinished reflexes	
95. 1st and 2nd signal systems (Pavlov), concrete and abstract thinking	47
96. Examples of problem situations	47
97. Phases of mentation	47
98. Ultimate phase of mentation – solution	48
99. Mentation based on and creating notions	48
100. ANN are creative in generating meaningful hypotheses (?)	48
101. Mentation and formal logic	48
102. Received data comparison and discrimination	49
103. Training set and simplification of a complex configuration	49
104. Training and testing sets of data	49
105. Mentation as induction and deduction	50
106. Mentation with abstraction and determination	50
107. ANN forms relations and associations of notions	50
108. Factor analysis space	51
109. Rotation of factors	51
110. Rotation of factors as mentation algorithm in REM sleep	52
111. Noematic manipulation of notions in REM sleep?	52
112. Formator in the Farley and Clark model.	53
113. Attempt at a “formatron”.	54
114. Illustration of 3D “rotation of correlations”	55
115. Illustration of “rotation of correlations” in four diagrams	56
116. History of ANN. The McCulloch and Pitts neuron, Minsky and Papert	56
117. XOR	56
118. Mathematician Hilbert	57
119. Mathematician Kolmogorov	57
120. Mathematician Hecht-Nielsen	58
121. Imperfect ANN and BNN, optic illusions formation	58
122. Example of psychotests for illusion formation	59

123. Micro-EEG-macro-EEG correlations, Verzeano, John and Morgades	59
124. EEG spectra during chords from Smetana's Vyšehrad	60
125. Noogenesis "static" or functional structure of sensorium	61
126. Diagram of thalamo-cortical reverberationsystem (TKRS)	61
127. TKRS function	62
128. Impulses in BNN are encoded in space and time rather than in velocity	62
129. Definition of consciousness	64
130. Definition of consciousness according to Kihlstrom	64
131. Definition of consciousness according to Vondráček	64
132. Definition of consciousness according to Sternberg	64
133. Vondráček and ultrasensibility, "I am aware of being aware"	65
134. Dual consciousness, rational and emotional	65
135. Consciousness according to Greenfield and Collins	65
136. Consciousness according to Crick and Koch	66
137. Diagram of "dynamic noogenesis"	70
138. Function of "dynamic noogenesis"	70
139. TCRS and its properties	71
140. Correlation of neurophysiological, psychological and cyber netic notions in the field of cognition and noogenesis	73
141. EEG recruitment and its analysis	75
