

Contents

1	Introduction	7
2	Methods, scenarios and data	11
2.1	General methodology	11
2.2	Climate change scenarios.....	14
2.3	The Hron River basin	21
2.3.1	<i>General description of natural conditions</i>	21
2.3.2	<i>Description of the pilot basins</i>	27
2.3.3	<i>Data</i>	31
3	Changes in the mean annual runoff	33
3.1	On the calibration of the Turc model in Slovakia.....	33
3.1.1	<i>A new method for the Turc model calibration</i>	36
3.2	Estimation of changes in the long-term mean annual runoff.....	39
3.2.1	<i>Scenarios from the National Climate Program of Slovakia (NCP scenarios)</i>	40
3.2.2	<i>Scenarios from the Cecilia project</i>	45
3.2.3	<i>Comparison of results</i>	56
4	Changes in the seasonal distribution of runoff	57
4.1	The monthly water balance model.....	57
4.2	Model calibration and validation in the upper Hron basin	63
4.3	Scenarios of changes in the mean monthly discharges	78
4.3.1	<i>Hron at Banská Bystrica</i>	78
4.3.2	<i>Hron at Brezno</i>	84
4.3.3	<i>Conclusion</i>	88
4.3	Inter-comparison with annual model.....	88

5	Extreme runoff.....	90
5.1	Simple model for extreme precipitation under climate change.....	91
5.2	The daily water balance model.....	97
5.3	Flood runoff simulation under climate change.....	99
6	References.....	107
