Table of Contents

Exploiting unconditional independencies in semigraphoid closure computation 1
Marco Baioletti, Giuseppe Busanello, Barbara Vantaggi

Coherent conditional possibilities in medical diagnosis 13
M. Baioletti, G. Coletti, D. Petturiti, B. Vantaggi

On general conditional prevision assessments 23
Veronica Biazzo, Angelo Gilio, Giuseppe Sanfilippo

Merging different probabilistic information sources through a new discrepancy measure 35
Andrea Capotorti, Giuliana Regoli, Francesca Vattari

Belief conditioning rules for classic belief functions 46
Milan Daniel

The role of assumptions in causal discovery 57
Marek J. Druzdzel

Bridges between contextual linguistic models of vagueness and t-norm based fuzzy logic 69
Christian G. Fermüller, Christoph Roschger

How people interpret an uncertain If 80
Andrew J. B. Fugard, Niki Pfeifer, Bastian Mayerhofer, Gernot D. Kleiter

On an approximative solution to the marginal problem 92
Martin Janžura

There are combinations and compositions in Dempster-Shafer theory of evidence 100
Radim Jiroušek, Jiřina Vejnarová

Structuring essential graphs 112
Gernot D. Kleiter

Completions of fragments of lattice-valued possibilistic distributions according to the principle of maximum entropy value 123
Ivan Kramosil

Equivalence problem in compositional models 133
Václav Kratochvíl

Selecting marginals for decision-making based on marginal problem 144
Otakar Kříž

Belief functions on formulas in Łukasiewicz logic 156
Tomáš Kroupa

Fuzzy previsions and applications to social sciences 167
Antonio Maturo, Aldo G.S. Ventre

Conditional probability spaces and closures of exponential families 176
František Matúš

Support sets in exponential families and oriented matroid theory 186
Johannes Rauh, Thomas Kahle, Nihat Ay

Mixtures of polynomials in hybrid Bayesian networks with deterministic variables 202
Prakash P. Shenoy, James C. West

Comparison of probabilistic and possibilistic approaches to modelling of economic uncertainty 213
Hans Schjær-Jacobsen

On open questions in the geometric approach to learning BN structures .. 226
Milan Studený, Jiří Vomlel

Variable selection in local regression models via an iterative LASSO 237
Diego Vidaurre, Concha Bielza, Pedro Larrañaga

An experimental comparison of triangulation heuristics on transformed BN2O networks 251
Jiří Vomlel, Petr Savicky

Divergence weighted independence graphs for the multivariate analysis of survey data 261
Joe Whittaker

Using mixtures of truncated exponentials for solving stochastic PERT networks 269
Esma Nur Cinicioglu, Prakash P. Shenoy
