TABLE OF CONTENTS

1. ELEMENTARY CHARACTERISTICS

1.1 Basic notions 7

1.2 Elementary statistical characteristics 8

1.3 Distribution of relative returns 12

2. PERIODICITY AND FILTERING

2.1 Fourier analysis 15

2.2 Moving averages 17

2.3 Exponential smoothing 20

3. BOX-JENKINS: STATIONARY PROCESSES

3.1 Basic notions 23

3.2 Autoregressive processes 25

3.3 Moving average processes 26

3.4 Mixed processes 28

4. BOX-JENKINS: NONSTATIONARY PROCESSES

4.1 Processes ARIMA and ARFIMA 29

4.2 Problems in ARIMA modeling 32

5. MODELS OF CONDITIONAL VARIANCE

5.1 Logarithmic-normal autoregressive model 37

5.2 ARCH and GARCH models 41

5.3 Another nonlinear stochastic models 44

6. LINEAR DYNAMICAL SYSTEMS

6.1 Stationary linear systems 47

6.2 Rheolinear systems 51

6.3 Difference equations 53

6.4 Combined systems 56

7. NONLINEAR DYNAMICAL SYSTEMS

7.1 Basic characteristics of nonlinear systems 59

7.2 Nonlinear oscillations 62

7.3 Deterministic chaos 65

7.4 Quantification of chaotic behavior 67

8. R/S ANALYSIS

8.1 Fractal dimension 73

8.2 Cycles detection 74

8.3 Fractal statistics 79

9. TECHNICAL ANALYSIS

9.1 Price indicators 83

9.2 Volume and other indicators 90

10. MATHEMATICAL ADDENDUM

10.1 Functions beta and gama 95

10.2 Dirac δ-function 97

10.3 Laplace and Fourier transform 99

10.4 Functions of complex variable 103

10.5 Matrix operations 106
