

GUIDEBOOK 1 – BASIS OF DESIGN AND ACTIONS ON BUILDINGS

CONTENTS

	Page
FOREWORD	3
CONTENTS	5
1 BASIC REQUIREMENTS	11
Summary	11
1 Introduction	11
2 Basic requirements	12
2.1. Principal requirements	12
2.2. Requirements related to the permanent design situations	13
2.2. Requirements related to the accidental design situations	13
3 Reliability management	14
4 Design working life	15
5 Durability	16
6 Quality management	17
References	18
Appendix A Reference documents	19
A.1. Introduction	19
A.2. Construction Product Directive	19
A.3. Interpretative document No. 1 Mechanical resistance and stability	20
A.4. Guidance Paper L	23
2 BASIS OF DESIGN – GENERAL PRINCIPLES	32
Summary	32
1 Introduction	32
1.1. Background documents	32
1.2. General principles	32
2 Historical development	33
2.1. Uncertainties	33
2.2. Definition of reliability	34
2.3. Development of design methods	35
3 Basic concepts of EN 1990	37
3.1. Design working life and design situation	37
3.2. Limit states	37
3.3. Ultimate limit states	40
3.4. Serviceability limit states	41
4 Verification of limit states	42
4.1. Verification of static equilibrium and strength	42
4.2. Verification of the serviceability limit states	43
5 Concluding remarks	43
Reference	44
Appendix A A reinforced concrete slab – various design concepts	45
A.1. Introduction	45
A.2. A reinforced concrete slab	45
A.3. Design and reliability consideration	45
A.4. Concluding remarks	47

3 RELIABILITY DIFFERENTIATION	48
Summary	48
1 Introduction	48
1.1 Background documents	48
1.2 General principles	48
2 Basic reliability elements	49
3 Target reliability in the Eurocodes	50
3.1 General	50
3.2 Reliability classes	50
3.3 Variation with time – Discussion	51
3.4 Global failure – robustness	53
3.5 Existing structures	53
4 Partial safety factors	51
4.1 Derivation based on reliability methods	54
4.2 Simplified reliability differentiation (Annex B of EN 1990)	55
5 Examples	56
5.1 Residential steel building	56
5.2 Agricultural steel building	56
5.3 Agricultural concrete building	56
6 Concluding remarks	57
References	57
Appendix A: Risk Acceptance Approaches in Codes	58
A.1 General	58
A.2 Human safety	58
A.3 Calibration	59
A.4 Cost – benefit approach	60
References	61
4 ACTIONS	62
Summary	62
1 Introduction	62
1.1 Background documents	62
2 Actions and effects of actions	62
2.1 Definitions of actions	62
2.2 Effect of actions	63
3 Classification of actions	65
3.1 General	65
3.2 By their variation in time	65
3.3 By their origin	65
3.4 By their variation in space	65
3.5 By their nature or structural response	65
3.6 Bounded and unbounded actions	66
3.7 Environmental influences	66
4 Reference period and distribution of maxima	66
4.1 Climatic actions	66
4.2 Imposed actions	67
5 Characteristic values	69
5.1 General	69
5.2 Permanent actions	69

Contents

5.3	Variable actions	70
5.4	Imposed loads	71
5.5	Snow loads	73
5.6	Wind loads	76
5.7	Thermal actions	81
6	Representative values	83
6.1	General	83
6.2	The combination value of a variable action	83
6.3	The frequent value of a variable action	83
6.4	The quasi-permanent value of a variable action	83
7	Representation of dynamic actions	84
8	Representation of fatigue actions	85
9	Representation of environmental influences	85
	References	85
5	ACCIDENTAL ACTIONS	86
	Summary	86
1	Introduction	86
1.1.	History	86
1.2	Background documents	87
2	Eurocode approach	87
3	Design for impact and explosion loads	90
3.1	Impact from vehicles	90
3.2	Loads due to explosions	90
3.3	Design example of a column in a building for an explosion	91
4	Robustness of building	94
4.1	Background	94
4.2	Summary of design rules	94
4.2.1	Design Rules for Class 2, Lower Group, Framed structures	94
4.2.2	Rules for Class 2, Lower group, Load-bearing wall construction	95
4.2.3	Rules for Class 2, Upper Group, Framed structures	95
4.2.4	Rules for Class 2, Upper Group, Load-bearing wall construction	95
4.3	Example structures	96
4.3.1	Framed structure, Consequences class 2, Upper Group	96
4.3.2	Wall structure, Consequences class 2, Upper Group	96
5	Conclusions	97
	References	97
	Appendix A: Methodology related to robustness assessment	98
A.1	Conditional probability of collapse	98
A.2	Quantification of robustness	99
A.3	Basic design philosophy	100
	References	101
	Appendix B: Impact Force Analysis	102
6	COMBINATION RULES IN EUROCODES	103
	Summary	103
1	Introduction	103
1.1.	Background documents	103
1.2	General principles	103
2	Combination of actions	104

Contents

2.1	General	104
2.2	Combinations of actions in persistent and transient design situations	104
2.3	Combination of actions for accidental and seismic design situations	105
2.4	Combination of actions for serviceability limit states	106
3	Examples	106
3.1	Cantilivered beam	106
3.2	Continuous beam of three spans	110
3.3	Cantilivered frame	113
3.4	Three bay two-dimensional frame	118
4	Concluding remarks	122
	References	122
	Appendix A: Alternative load combinations for the cantilevered beam	123
7	ACTIONS IN TRANSIENT DESIGN SITUATIONS	125
	Summary	125
1	Introduction	125
1.1.	Background documents	125
1.2	General principles	125
2	Design situations during execution	125
2.1.	Design situations	125
2.2	Nominal duration of design situations	126
3	Representative and design values of actions during execution	128
4	Combinations of actions	129
5	Actions during execution	129
6	Annex A for buildings and bridges	131
6.1.	Annex A1 Supplementary rules for buildings	131
6.2	Annex A2 Supplementary rules for bridges	131
7	Annex B for Actions on structures during alteration, rehabilitation or demolition	131
8	Concluding remarks	132
	References	133
8	ACTIONS AND COMBINATION RULES FOR SILOS AND TANKS	134
	Summary	134
1	Introduction	134
1.1.	Background documents	134
1.2	Basic principles	134
2	Design situations	135
3	Actions on silos and tanks	136
3.1	Types of actions	136
3.2	Actions specific on silos	136
4	Classification of silos	137
5	Combinations of actions for silos	137
5.1	Combinations of actions in persistent design situations	137
5.2	Combinations of actions in accidental design situations	138
5.3	Combinations of actions in seismic design situations	139
5.4	Combinations of actions in serviceability limit states	139
6	Combinations of actions for tanks	140
6.1	Actions	140
6.2	Combinations of actions	140

Contents

7	An example of slender silo	140
7.1	Introduction	140
7.2	Symmetrical filling loads on vertical walls	141
7.3	Filling patch load	143
7.4	Symmetrical discharge load	144
7.5	Discharge patch load	145
8	Concluding remarks	145
	References	145

9 LOAD EFFECTS IN STRUCTURAL MEMBERS **147**

	Summary	147
1	Introduction	147
1.1	Background documents	147
1.2	General principles	147
2	Verification of static equilibrium and strength	148
3	Verification of serviceability limit states	149
4	Examples	149
4.1	Cantilevered beam	149
4.2	Continuous beam of three spans	153
4.3	Cantilevered frame	156
5	Concluding remarks	161
	References	161

10 DESIGN OF A REINFORCED CONCRETE BUILDING ACCORDING TO EUROCODES **162**

	Summary	162
1	Introduction	162
2	The building	162
3	Actions, loadings and load combinations	164
3.1	Density and self-weight	164
3.2	Imposed loads	164
3.3	Snow load	164
3.4	Wind actions	165
3.5	Load combinations for ULS verifications	167
3.6	Load combinations and limitations for SLS verifications	168
4	Materials	169
4.1	Stress-strain diagrams	170
5	Results of the structural analysis	170
6	Static verification examples	172
6.1	Verification of the first floor beams	172
6.2	Verification of the corner column	174
7	Concluding remarks	174
	References	175
	Appendix to Chapter 10	176
A.1	Basic structural drawings of the building	176

ANNEX A: DESIGN ASSISTED BY TESTING **185**

	Summary	185
1	Introduction	185
2	Statistical determination of a single property	185

Contents

2.1	General principles	185
2.2	Assessment based on the characteristic value	186
2.3	Direct assessment of the design value	187
3	Statistical determination of resistance models	188
3.1	General procedure	188
3.2	An example of a concrete slab	191
	References	192
 ANNEX B: ASSESSMENT OF EXISTING STRUCTURES		193
	Summary	193
1	Introduction	193
2	Principles and general framework of assessment	194
3	Investigation	197
4	Basic variables	198
5	Evaluation of inspection results	199
6	Structural analysis	200
7	Verification	202
8	Assessment in the case of damage	202
9	Final report and decision	203
10	Numerical example	204
	10.1 Updating of failure probability	204
	10.2 Bayesian method for fractile estimation	205
11	Concluding remarks	207
	References	208
 ANNEX C: FURTHER DEVELOPMENT OF EUROCODES		209
	Summary	209
1	Introduction	209
2	New CPR and sustainable constructions	210
3	Evolution of Eurocodes	211
	3.1 Maintenance	211
	3.2 Harmonization	211
	3.3 Promotion	212
	3.4 Further developments	213
4	Research for further development of Eurocodes	214
	References	214
