

# CONTENTS

## Foreword

## Nomenclature

<b>1</b>	<b>Introduction to fluid mechanics</b> .....	<b>15</b>
1.1	Fluid mechanics – the subject matter .....	15
1.2	Fundamental concepts of Fluid mechanics and Thermodynamics.....	18
1.2.1	Pressure in compressible flow.....	23
1.3	Viscosity of fluids .....	26
1.3.1	Calculating the viscosity of multi-component gas mixtures.....	30
1.3.2	Viscosity of gases and mixtures of gases at low pressures.....	33
1.3.3	Viscosity of gases and mixtures of gases at high pressures .....	36
1.4	Forces acting on fluids .....	37
1.5	Methods of studying fluid motions .....	38
<b>2</b>	<b>Fundamental laws of conservation</b> .....	<b>40</b>
2.1	General form of equilibrium in fluids .....	40
2.2	The law of conservation of mass – the equation of continuity .....	42
2.3	The law of conservation of momentum – equation of motion .....	44
2.4	The law of conservation of energy .....	51
2.5	Fundamentals of similitude in fluid mechanics .....	56
<b>3</b>	<b>Fluid Flow</b> .....	<b>61</b>
3.1	Types of fluid flow .....	61
3.2	Hagen-Poiseuille flow in pipes – the physical essence of frictional losses .....	63
3.3	The physical essence of minor losses .....	67
3.4	Characteristics of turbulent flow.....	74
3.5	Equation of motion for turbulent flow .....	77
3.6	Boundary layer.....	78
3.7	Prandtl's theory of mixing length.....	79
3.8	Velocity profile of a turbulent flow .....	81
3.9	Flow in a rough pipe, determination of $\overline{c_{x \max}}$ .....	85
3.10	Velocity profile for high values of Re .....	87
3.11	Coefficient of friction .....	89
3.12	Practical conclusions on determination of the coefficient of frictional losses ...	93
<b>4</b>	<b>Hydraulic solution of piping systems for liquid flow</b> .....	<b>103</b>
4.1	Principles of hydraulic solutions of piping systems.....	103
4.2	Pipe characteristics.....	104
4.3	Simple piping system .....	107
4.4	Complex piping system.....	110
4.5	Pipes connected in series – one after another. ....	112
4.6	Pipes connected in parallel – one next to the other.....	114
4.7	Graphical solution of pipes connected in series and parallel.....	116
4.8	Pump characteristics.....	118
4.9	Graphical solution of a piping system with a pump. ....	120

<b>5</b>	<b>Solving stationary flow of a gas in piping systems</b> .....	<b>135</b>
5.1	Solving stationary isothermal flow in piping systems.....	135
5.1.1	Determination of pressure drop.....	135
5.1.2	Equations used for calculation of flow rate and pressure in gas works. ...	139
5.1.3	Pipe characteristics .....	142
5.1.4	Pipes connected in series (one after another) .....	143
5.1.5	Pipes connected in parallel - next to each other .....	145
5.1.6	Equivalent pipe for a combined network .....	147
5.1.7	Characteristics of a machine - compressor.....	148
5.1.8	Graphical solution of simple piping systems .....	150
5.2	Equation of energy for stationary flow in pipes.....	153
5.2.1	Methods of solving stationary flow of a gas in a simple pipeline.....	157
5.2.2	Comparison of some results acquired for stationary flow of gas in a simple pipe .....	162
<b>6</b>	<b>Hydraulic solution of complex piping system for stationary fluid flow</b> .....	<b>166</b>
6.1	Pipe network analysis .....	166
6.1.1	Definition of fundamental terms and concepts .....	166
6.1.2	Line-node matrix.....	167
6.1.3	Line – circuit matrix .....	169
6.2	Algorithm of the solution to a pipe network.....	173
6.3	Isothermal fluid flow model in a horizontal pipe network and its solution .....	175
6.3.1	Systems in which the flowing fluid is gas .....	175
6.3.2	Systems in which the flowing fluid is liquid.....	176
6.3.3	Algorithm for solving system of equations of an isothermal flow .....	177
6.4	Non-isothermal model of fluid flow in pipe networks with elevation differences and its solution .....	179
6.5	Results of the solution of a simple network for non-isothermal gas flow model.....	185
6.6	Results of the solution to a simple heating network for non-isothermal liquid flow model .....	200
6.6.1	Heat-hydraulic balancing of a heating system .....	201
6.6.2	Influences of selected parameters on the operation of a heating system .....	204
<b>7</b>	<b>Non-stationary flow of compressible fluids in pipes</b> .....	<b>208</b>
7.1	Fundamental flow model for a simple pipe .....	208
7.2	Simplifying the basic model in accordance with specific flow properties in a gas network .....	211
7.3	Comparison of accuracies of the simplified models .....	215
7.4	Pipe network, boundary and initial conditions.....	217
7.5	Numerical methods of solving non-stationary flow in pipe.....	219
7.6	Lax-Wendroff method .....	221
7.7	The implicit method.....	224
7.8	Simulation results of a simple example .....	230
<b>8</b>	<b>Hydraulic solution to non-stationary flow of liquid in piping systems</b> .....	<b>236</b>
8.1	Wave propagation in a pipe filled with liquid.....	236

8.2	Mathematical model of a non-stationary, isothermal liquid flow and its solution .....	242
8.3	Hydraulic transient in pipes.....	244
8.4	Hydraulic transient equations, graphical method of solving hydraulic transients.....	247
8.5	Including losses in the graphical solution .....	257
8.6	Non-stationary flow of liquids in pipes, neglecting compressibility .....	257
<b>LITERATURE .....</b>		<b>267</b>
