1	INTRODUCTION	5
2	GOAL OF THESIS	5
3	THEORETICAL BACKGROUND	5
3.1	Degrees of Freedom	6
3.2	Vector Fields and Spaces	6
3.3	Vector Fields and Spaces in Control of WMRs	6
3.4	Differential Constraints	6
4	MODELLING OF WMRs	7
4.1	Reference Point	7
4.2	Instantaneous Centre of Rotation (ICR)	7
4.3	Coordinate Systems and Homogenous Transforms	8
4.3.1	Coordinate Systems	8
4.3.2	Homogenous Transforms	9
4.4	Generalized Coordinates and Velocities	9
4.5	Kinematic Models	9
4.6	Validity of Kinematic Models	10
4.7	Kinematic Simplification	10
4.7.1	Unicycle Example	10
4.7.2	Car Example	11
5	CONTROL OF WMRs	11
6	MULTI-STEERED WHEELED MOBILE ROBOTS	12
7	Models of MSWMRs	13
7.1	Multi-steered Car	13
7.2	Bi-steered WMR	13
7.3	Four-steered WMR - Computation of Steering Angles	14
7.4	Control of Multi-Steered WMRs - State of the Art	16
8	CONTROL OF A BI-STEERED WMR USING DECOMPOSED CONTROLLER	17
8.1	Controller Design	17
8.2	Set-point Stabilization	18
8.3	Trajectory Tracking	22
9	FURTHER DEVELOPMENT	26
10	CONCLUSION	27
