

Contents

1	Motivation	5
2	The aims of the Ph. D. thesis	5
3	Optimization in engineering design	6
4	Mathematical programming and multi-objective optimization	6
5	Stochastic programming	7
6	Optimization models and their properties	8
6.1	Stochastic optimization of transverse vibrations of a string . . .	8
6.2	Stochastic optimization of transverse vibrations of a console . . .	11
6.3	Relationship between EO and EV solution of the two-stage stochastic quadratic program	13
6.4	Stochastic optimization of design of beam cross section dimensions	15
6.5	Chance constrained stochastic optimization of design of beam cross section dimensions	19
7	Algorithms and their implementations	23
7.1	Monte Carlo bounding technique	23
7.2	Progressive hedging algorithm	25
7.3	Comparison of FDM and FEM – case study	26
8	Conclusions	27
