

CONTENTS

Introduction	4
Basics of data acquisition	5
1.1. Red blood cell count	9
1.2. Estimation of haemoglobin concentration and of mean corpuscular haemoglobin	11
2. Estimation of blood group by slide method	13
3. Erythrocyte sedimentation rate	15
4. Estimation of osmotic resistance of red blood cells	16
5. Signal detection by PowerLab system – instructions	18
6. Apex beat, heart sounds	22
7. Examination of pulse by palpation	23
8. Blood pressure in man	26
9. Non-invasive methods of blood pressure measurement	29
10. ECG record by means of personal computer	31
11. Digital model of aortic function (a simulation program)	34
12. Measurement of pulse wave velocity. Sphygmography	36
13. Systolic time intervals	39
14. Ergometry	41
15. Blood flow in forearm (Pletysmography)	46
16. Blood flow in veins	49
17. Pneumography	50
18. Spirometric examination	53
19. Recording of forced vital capacity	55
20. Pneumotachography and estimation of airway resistance	56
21. Evaluation of sensitivity of respiratory centre to hypoxia and to hypercapnia	50
22. Measurement of basal metabolic rate (BMR). Energy output in change of body position. Repay of oxygen debt.	62
23. Calculation of energy expenditure	65
24. Compiling daily diet	66
25. Evaluation of nutritional state	69
26. Recruitment and summation in skeletal muscle	75
27. Examination of reflexes in man	78
28. Recording of Achilles' tendon reflex	80
29. Erect posture examination	82
30. Vertigo and nystagmus	85
31. Skin sensation and general physiology of the skin	87
32. Cutaneous sense organs	89
33. Estimation of visual acuity	90
34. Accommodation, Scheiner's experiment	91
35. Visual field and blind spot	92
36. Examination of colour blindness	93
37. Astigmatism	94
38. Vision in dark	96
39. Observation of ocular fundus	97
40. Purkyně's images	98
41. Estimation of reaction time using computer	99
42. EOG – Electrooculography	100
43. EEG – Electroencephalography	102
Appendix 1: Selected units (SI) used in physiology	105
Appendix 2: Selected pressure units conversions	105
Appendix 3: Selected physiological values	106
