

Preface	3
1. Introduction	5
2. Physical Characteristics of Light	12
3. Plasma – the State of Solar Matter	19
4. Sun – Our Nearest Star	25
5. Solar Power Plants	32
6. The Physical Principles of Photovoltaic Energy Conversion	43
7. The Design and Manufacture of Photovoltaic Cells and Panels	54
8. Photovoltaic Solar Systems with Fixed Stand	63
9. Photovoltaic Solar Systems with Tracking Stand	66
10. Other Possibilities for Enhancement of Power Production	77
11. Testing the Lifespan of Photovoltaic Systems	86
12. Accumulation of Solar Energy	89
13. Electronic Inverters	95
14. Application of Solar Photovoltaic Systems	97
15. The Economics of Solar Photovoltaic Systems	102
16. Solar Energy Conferences and Exhibitions	106
17. Installation and Maintenance of the Tracking Stand TRAXLE™	109
18. Supplement	115
References	167
