Plenary Lectures

Beran Rudolf Boosting Efficiency by Multiple Affine Shrinkage	1
Štěpán Josef Extremal Probability Measures with Given Marginals	2
Topsøe Flemming Between Truth and Description	3

Invited Lectures

Ahmed Nasiruddin U. McKean Vlasov Diffusion on Hilbert Space and Optimal Control	6
Arjas Elja Covariate information in complex event history data - some thoughts arising from a case study	6
Atkinson Anthony The Forward Search and Robust Econometrics	7
Breidt F. Jay, Davis Richard A., Hsu Nan-Jung, Rosenblatt Murray Another Look at Estimation for Moving Averages Time Series with Unit Root	7
Dozzi Marco On the local time of multifractional Brownian motion	8
Drton Mathias Algebraic Techniques for Gaussian Models	8
Dupačová Jitka Contamination for multistage stochastic programs	9
Dürkes Andreas, Kreiss Jens-Peter Nonparametric Modelling and Estimation of Stochastic Volatility	9
Einmahl John, Fils-Villetard Amélie, Guillon Armelle Statistics of Extremes under Random Censoring	10
Goh Chuan, Knight Keith Regression quantile spacings	10
Gordillo Luis F., Greenwood Priscilla, Kuske Rachel Autonomous Stochastic Resonance Produces Epidemic Oscillations of Fluctuating Size	11
Gordin Mikhail Central limit theorem for U -statistics of a measure preserving transformation	11
Györfi László, Marten Wegkamp Quantization for nonparametric regression	12
Hallin Marc Local Linear Spatial Quantile Regression	12
Hanousek Jan, Kočenda Evžen, Svejnar Jan Corporate Breakups and Performance: Czech Case	13
Heitsch Holger, Römisch Werner Generating scenario trees for multistage stochastic programs	13

Horváth Lajos	
Detecting changes in nonlinear time series models	14
Ingłot Tadeusz, Ledwina Teresa	
Data Driven Score Tests for a Homoscedastic Linear Regression Model: the Construction and Simulations	14
Janeček Karel	
Optimal investments with proportional profit-share fee: Analysis of the high-water-mark fee structure	15
Kahle Waltraud	
Incomplete Preventive Maintenance	15
Karatzas Ioannis	
Probabilistic aspects of equity markets: Diversity, Intrinsic Volatility, and Arbitrage.	16
Koenker Roger, Mizera Ivan	
The alter egos of the regularized maximum likelihood density estimators: deregularized maximum-entropy, Shannon, Rényi, Simpson, Gini, and stretched strings	16
Kühn Christoph	
Optimal investment in financial markets with different liquidity effects	17
Last Günter	
Distributional properties of Poisson Voronoi tessellations	17
Mammen Enno, Støve Bård, Tjøstheim Dag	
Additive models for panels of time series	18
Massam Hélène	
Conjugate priors for Gaussian and discrete graphical models	18
Morales Domingo	
Rényi Statistics for testing composite hypothesis in exponential models	19
Nyquist Hans	
Computational aspects of optimal design of experiments: A review.	19
Ondreját Martin	
Stochastic wave equations	20
Pflug Georg	
Tree approximations to multiperiod stochastic programs	20
Raftery Adrian E.	
Recent Advances in Model-Based Clustering: Variable Selection and Social Networks	21
Ronchetti Elvezio	
Robust Statistical Techniques for Financial Modelling	21
Roverato Alberto	
Discrete graphical models and exponential family	22
Ruggeri Fabrizio, Sansó Bruno	
A Bayesian multi-fractal model with application to analysis and simulation of disk usage	22
Rukhin Andrew L.	
Pattern Correlation Matrices for Testing Randomness and Deviations from Stationarity	23
Swart Jan M.	
The Brownian net	23
Tomášek Ladislav	
Assessment of chronic exposures in epidemiological studies and temporal modifiers of the risk	24

van Lieshout M.N.M. Campbell and Moment Measures for Finite Sequential Spatial Processes	24
Vere-Jones David Some Methods and Examples for Space-Time Point Processes	25
Yanez David Longitudinal Analysis of Imaging Data in the Presence of Measurement Error	25
Contributed Talks	27
Aksin O. Zeynep, Cakan Nesrin, Karaesmen Fikri, Örmeci Lerzan Joint Flexibility and Capacity Design in Service and Manufacturing Systems	28
Astola Jaakko, Ryabko Boris Universal Codes as a Basis for Time Series Testing	28
Atramentova Lubov A., Belyaeva L.V., Sologub Tatyana Familial Correlation Analysis of Manifestation Ages of Intestine and Lung Cancer	29
Aue Alexander, Horváth Lajos, Piotr Kokoszka, Steinebach Josef Monitoring Shifts in Mean: Asymptotic Normality of Stopping Times	29
Belaide Karima, Bentarzi Mohamed Principales proprieties of long memory and periodic long memory models	30
Belopolskaya Yana, Sergio Albeverio Probabilistic approach to classical and weak solutions of the Navier-Stokes system	30
Beneš Viktor, Helisová Kateřina, Klebanov Lev On intersection of OUCP and SNCP point processes	31
Bertail Patrice, Gautherat Emmanuelle, Harari-Kermadec Hugo Empirical Discrepancies and Quasi-Empirical Likelihood : Exponential Bounds	31
Betinec Martin Application of ROC Curves for Evaluation of Classification	32
Bibi Abdelouahab, Gautier Antony Minimum Distance Estimation For Periodic Bilinear Models	32
Blažek Rudolf Bohumil Optimization of Sequential Change-point Detection Methods in Network Security	33
Bose Sudip, Taufer Emanuele Optimal predictive densities and fractional moments	33
Brunel Elodie, Comte Fabienne Adaptive nonparametric estimation for censored regression with applications	34
Čerbáková Jana Stability of Bayes actions	34
Čížek Pavel Adaptive trimmed estimation in binary regression models	35
Craiu Radu V., Vaida Florin Model Focus and Deviance Information Criterion Computation from MCMC Output	35
Cruz-Suárez Daniel, Montes-de-Oca Raúl, Salem-Silva Francisco Uniform Approximations of Discounted Markov Decision Processes to Optimal Policies	36
Csiszár Imre, Matúš František Generalized maximum likelihood estimates for infinite dimensional exponential families	36

del Puerto Inés M., Molina Manuel, Ramos Alfonso Bisexual branching processes with couple immigration	37
Diop Aliou Extremes of a Threshold Autoregressive Stochastic Volatility model	37
Dostál Petr HARA - optimal trading strategies with transaction costs paid for one of several assets	38
Drost Feike C., van den Akker Ramon, Werker Bas J.M. Asymptotic Analysis of Nearly Unstable INAR(1) Models	38
Duffet Carole, Gannoun Ali, Guinot Christiane, Saracco Jerome An affine equivariant estimator of conditional spatial median	39
Dyachkov Arkadii G. Shannon Theorems for Steganography Channel	39
Fabián Zdeněk Johnson point and Johnson variance	40
Fajfrová Lucie Infinite queueing system with tree structure	40
Frangos Christos Box and Jenkins Forecasting of future values of "closed-end" investment funds	41
Frýdlová Iva, Václav Kůs Minimum Kolmogorov Distance and Minimum Blended ϕ -divergence Estimators	41
Gamrot Wojciech On covariance estimators for two-phase samples under nonresponse	42
Ganatsio Chrysoula, Perakis Konstantinos On the existence of a class of finite discrete parameter Markov processes generated by direct weighted circuits	42
Giraud Maria Teresa, Sacerdote Laura Effects of random jumps on a neuronal diffusion model with reversal potential	43
Gontis Vyngintas, Kaulakys Bronislovas, Miglius Alaburda Long-range stochastic point processes with the power-law statistics	43
González Miguel, Martínez Rodrigo, Mota Manuel Non-parametric Bayesian estimation for branching processes with immigration through MCMC methods	44
Gordienko Evgueni, Novikov Andrey Probability metrics and robustness: Is the sample median more robust than the sample mean?	44
Grendar Marian L-divergence consistency for a discrete prior	45
Gugushvili Shota, Spreij Peter, van Es Bert A kernel type nonparametric density estimator for decomposing	45
Hall Andreia, Scotto Manuel On The Maximum Term Of Periodic Integer-Valued Sequences With Exponential Type Tails	46
Harremoës Peter Thinning and the Law of Small Numbers	46
Helmers Roelof Estimating the intensity of a cyclic Poisson process in the presence of linear trend	47

Henrion René	
Structural analysis for some basic types of probabilistic constraints	47
Henriques Carla, Oliveira Paulo Eduardo	
Large deviations for the empirical mean of associated random variables	48
Hobza Tomáš, Pardo Leandro	
On Robustness of Median Estimator in Bernoulli Logistic Regression	48
Hörmann Siegfried	
Asymptotic Properties of Augmented GARCH (1, 1) Sequences	49
Houda Michal	
Comparison of approximations in stochastic and robust optimization programs	49
Houda Michal, Kaňková Vlasta	
Empirical Processes in Stochastic Programming	50
Hušková Marie, Koubková Alena	
Sequential procedures for detection of changes in autoregressive sequences	50
Iglesias-Pérez M. del Carmen, Jácome M. Amalia	
Presmoothed estimation with left truncated and right censored data	51
Janssen Arnold, Ostrovski Vladimir	
The convolution theorem of Hájek and Le Cam - revisited	51
Jarušková Daniela	
Testing for a change in Weibull distribution	52
Jorgensen Bent, Martinez Jose Raul, Vinogradov Vladimir	
On Convergence Properties of Families of Esscher Transforms	52
Jurečková Jana	
Regression Rank Scores in Nonlinear Model	53
Kadry Seifedine	
Random Eigenvalue Problem of Stochastic Systems	53
Kan Yuri	
Quantile Comparison with Maximum of Losses	54
Karol Andrei, Nazarov Alexander, Nikitin Yakov	
Small deviations for tensor products of Gaussian fields in Hilbert norm	54
Katarzyna Lubnauer, Łuczak Andrzej, Podseǳkowska Hanna	
Sufficiency of quantum statistics	55
Klaassen Chris A.J., Mokveld Philip J., van Es Bert	
Current Duration or Length Biased Sampling: Does it Pay to be Patient?	55
Kláštèrecký Petr, Kulich Michal	
On Parameter Estimation in Case-Cohort Cox Proportional Hazards Models	56
Kopa Miloš, Thierry Post	
On Portfolio FSD Efficiency Tests: Admissibility versus Optimality	56
Koski Timo	
Bayesian unsupervised classification algorithms based on parallel search strategy	57
Koubková Alena	
Sequential Change-Point Detection in Linear Models	57

Kraus David Nonparametric generalized linear models for marked point processes	58
Kühn Mario A Test for a Change in the Mean, based on Weighted Moving Averages	58
Lachout Petr Sensitivity of stochastic programs by means of the infimum functional	59
Lánský Petr, Pokora Ondřej Optimal signal in ligand-receptor models	59
Lao Wei, Stummer Wolfgang Divergences and Bayes risks concerning some discrete-time financial model choices	60
Laurinćikas Antanas On one application of the theory of processes in analytic number theory	60
Läuter Henning Estimation in Survival Models	61
Liebscher Eckhard Statistical inference of multivariate density estimators in a copula-based model	61
Liero Hannelore Goodness of testing in survival models	62
Liese Friedrich Selection Procedures for Sparse Data	62
Litvak N., Volkovich Y., W.R.W. Scheinhardt In-Degree and PageRank of Web pages. Why do they follow similar Power Laws?	63
Manstavičius Eugenijus Conditional Probabilities in Combinatorics. The Cost of Dependence	63
Marek Tomáš, Vrbenský Karel Minimum Pearson Divergence Adaptation of Bivariate Distributions	64
Maslowski Bohdan Absolute continuity of probability laws defined by fractional Brownian motion driven stochastic equations	64
Md.Jahanur Rahman, Miyagawa Shigeyoshi, Morita Yoji Modelling and Estimation of Precautionary Demand caused by Financial Anxieties	65
Menendez Maria Luisa, Pardo Maria del Carmen, Zografos Konstantinos Higher-order Markov dependence in DNA sequences via phi-divergence test statistics	65
Müller Christine Distribution free tests for regression based on simplicial depth	66
Nagaev Sergey On the best constants in the Burkholder type inequality for the product of independent random variables	66
Nirian Martín, Pardo Leandro Model checking in loglinear models using phi-divergence measures	67
Novikov Andrey Locally most powerful two-stage tests	67
Novikov Petr Locally optimal tests for multivariate parameter with order-restricted alternatives	68

Omelka Marek

- An alternative method for constructing confidence intervals from M -estimates in linear models 68

Paszkiewicz Adam

- Characterization of orthogonal series converging a.s., and processes with orthogonal increments 69

Paterson Andrew D, Radu V. Craiu, Shelley B. Bull, Sun Lei

- Non-Discovery Rate and Stratified FDR Control with Application to Genome-Wide Association Studies 69

Pawlas Zbigniek

- Estimation of the distribution function in germ-grain models 70

Picek Jan

- L-moments based on regression quantiles 70

Plát Pavel

- Robustified Hausman's Test 71

Pospíšil Jan

- On Ergodicity of Stochastic Evolution Equations Driven by Fractional Brownian Motion 71

Ranocha Pavel

- Stationary marginal distribution of some autoregressive processes 72

Rencova Monika

- Changes in Parameters of Weibull Distribution 72

Rodrigues Eliane R.

- A non-homogenous Poisson model to estimate the number of ozone peaks in Mexico City 73

Rublík František

- On Testing the Hypothesis of Partial Common Principal Components 73

Sen Pranab K.

- Nonstandard Asymptotics for Quasi-von Mises Functionals with Applications 74

Siemenikhin Konstantin

- On Linearity of Minimax Estimates in General Linear Regression Models 74

Šimeček Petr

- Classes of Gaussian, Discrete and Binary Representable Independence Models Have No Finite Characterization 75

Šimečková Marie

- Properties of Robust Estimators in Logistic Regression 75

Sirovich Roberta, Zucca Cristina

- Multidimensional Bridges with Application to the Integrated Brownian Motion 76

Sitaf Milan, Sladký Karel

- Necessary and Sufficient Optimality Conditions in Multichain Semi-Markov Decision Processes 76

Šmíd Martin

- On Markov Properties of Limit Order Markets 77

Steland Ansgar

- On Monitoring a Sequential Linear LS Residual Process for Integrated Errors 77

Streit Franz

- Model Selection by Statistical Tests: Poisson Point Processes versus Self-Exciting Point Processes 78

Stummer Wolfgang

- Entropies, divergences and optimal statistical decisions about some financial models 78

Takano Seiji

Inequality of Relative Entropy for a Sum of Dependent Random Variables

79

Tishkovskaya Svetlana

Problem of Optimal Grouping in Bayesian Estimation

79

Vajda Igor, van der Meulen Edward C.

On Estimation and Testing by Means of ϕ -disparities Based on m -spacings

80

Vajda Igor, Zvárová Jana

On Relations between Informations, Entropies and Bayesian Decisions

80

Vajda István

Analysis of a sequential investment strategy

81

Vaněček Pavel

Functional Estimators of RCA(p) Time Series

81

van Zwet Willem R.

Statistics and the law: the case of the negligent nurse

82

Veraverbeke Noël

Residual Life under Dependent Censoring

82

Víšek Jan Ámos

Least Trimmed Squares - Sensitivity Study

83

Vogel Silvia

Estimators as Solutions to Random Optimization Problems: Convergence Rate and Confidence Bounds

83

Volf Petr

A Model of Decrease of Lifetime Caused by a Shock

84

Yurachkivsky Andriy

Random hypermeasures

84
