

Content

1. Entering the theory and methods of decision making	7
1.1 First steps into the issue	7
1.2 Basic elements of decision making process	8
1.3 Decision making under certainty, risk and uncertainty	11
1.4 Basic concepts.....	14
2. Preferential system of a decision maker	15
2.1. Preferences	15
2.2. Methods for ranking alternatives.....	16
3. Mathematical model of decision situations	17
3.1. Mathematical models.....	17
3.2. Non conflicting decision situations	19
3.3. Linear programming.....	21
3.4. Linear programming - illustrative examples	23
3.5. Optimal production program	26
3.6. Transportation problem.....	27
3.7. Best coverage problem	29
3.8. Tasks	30
4. Conflict of two rational participants	32
4.1. Game theory	32
4.2. Antagonistic conflict.....	34
4.3. Examples: Finite and infinite antagonistic game	35
4.4. Non antagonistic conflict.....	37
4.5. Example: Non antagonistic game	37
4.6. Non cooperative theory.....	38
4.7. Cooperative theory - transferable payoff.....	40
4.8. Cooperative theory - non transferable payoff.....	44
4.9. Example: Non transferable payoff.....	47
4.10. Conflict of p-intelligent participants	49
4.11. Tasks	51
5. Conflict of n rational participants	52
5.1. General mathematical model.....	52
5.2. Non cooperative theory.....	52
5.3. Cooperative theory - coalitions	54
5.4. Examples.....	57
5.5. Cooperative theory - transferable payoff.....	57
5.6. Cooperative theory - non transferable payoff.....	60
5.7. Examples.....	62
5.8. Tasks	69
6. Matrix game theory	71
6.1. Matrix game	71
6.2. Optimal strategy.....	73

6.3.	Saddle point - solution in pure strategies	73
6.4.	Game without saddle point	75
6.5.	Solution in mixed strategies	76
6.6.	Solving matrix games using methods of linear programming.....	79
6.7.	Matrix games type 2×2	80
6.8.	Matrix games type $2 \times n$	81
6.9.	Matrix games type $m \times 2$	82
6.10.	Matrix games type $m \times n$	83
7.	Practicing.....	85
7.1.	How to reduce size of the game by dominating	85
7.2.	How to solve matrix games such as $2 \times n$, respectively 2×3	85
7.3.	How to solve matrix games such as $2 \times n$, respectively 2×5	88
7.4.	How to solve matrix games type $m \times 2$, respectively 5×2	90
7.5.	How to solve matrix games with the existence of saddle point in matrix payoff	94
8.	Decision making under risk	96
8.1.	Risk and uncertainty	96
8.2.	Decision making under risk.....	97
8.3.	Rationality of decision making under risk.....	98
8.4.	Maximization, optimization and satisfaction principles	100
8.5.	Risk estimation	100
8.6.	Utility function	101
8.7.	Perfect information and its price	102
8.8.	Selective information and its price	103
8.9.	Example.....	104
8.10.	Tasks	106
9.	Decision making under indeterminacy and uncertainty.....	108
9.1.	Indeterminacy and rationality of choice.....	108
9.2.	Individual criteria	108
	LAPLACE CRITERION.....	108
	WALD CRITERION	109
	OPTIMISTIC CRITERION	109
	HURWICZ α - CRITERION	110
	SAVAGE CRITERION	110
9.3.	Examples	111
9.4.	Decision making under uncertainty, Bayesian criterion	115
9.5.	Tasks	118
10.	Graphical methods of decision making, Decision trees.....	121
10.1.	Branch decision making.....	121
10.2.	Decision tree construction.....	123
10.3.	Tasks	128
	A few words at the end.....	129
	Sources and recommended reading.....	130
