

Contents

Summary.....	2
Souhrn	3
Keywords	4
Klíčová slova.....	4
Contents	5
Introduction.....	7
Physical modelling.....	7
Similitude and hydraulic model studies	9
Mathematical modelling	12
Multiphase flow and CFD	14
From physical problem to physical and mathematical modelling.....	17
Physical modelling.....	18
Numerical Simulation.....	18
Combination of the modelling techniques.....	19
Example 1: physical model - Whitewater Canoe Course in Rio de Janeiro for Olympic Games in 2016.....	21
What is expected of these water structures?	21
The hydraulic characteristics of artificial whitewater courses	23
The creation of turbulent surface flow features.....	24
Design components and construction	24
Competition Course	25
Stopper pool.....	27
Example 2: combination of the mathematical and physical model – structures for the Whitewater Centre.....	29

Starting pool	29
Lake.....	31
Comparison of the mathematical model with model measuring.....	32
Pumps for the “Lazy river basin”	33
Example 3: mathematical model – secondary clarifiers used at WWTP Prague	36
Methodology	36
Mathematical model of the clarifier	37
Model proved by measurements in situ	38
Future activities	40
References	42
Acknowledgements.....	44
Životopis.....	45
