

1. Introduction	3
1.1. What are genetically modified (GM) crops?	
1.2. How widespread are GM crops in agricultural practice?	
1.3. What precedes and what follows placing of GM crops on the EU market?	
1.4. What is coexistence of GM crops with conventional and organic agriculture?	
1.5. Which rules and administration relate to GM crops cultivation?	
1.6. What is Bt maize and the European corn borer (ECB)?	
1.7. How to control ECB? The significance of Bt maize	
2. Overview of Bt maize cultivation in the Czech Republic in 2005–2009	9
2.1. Development of areas and number of growers	
2.2. Regional distribution of areas	
2.3. Distribution of growers by legal form	
3. Survey among Czech Bt maize growers from the first 3 years of cultivation	16
3.1. Survey methodology	
3.2. Advantages and disadvantages of Bt maize cultivation	
3.3. Use of Bt maize	
3.4. Bt maize yields	
3.5. Fungal diseases in Bt maize	
4. Direct experience of Czech Bt maize growers	24
4.1. Current Bt maize growers	
4.2. Former Bt maize growers	
5. Findings from varietal testing of Bt maize in the Czech Republic in 2004–2008	29
5.1. Registration of varieties in the Czech Republic	
5.2. Yield parameters of Bt maize	
5.3. Fungal diseases in Bt maize	
5.4. Summary	
6. Monitoring of biological effectiveness of Bt maize in the Czech Republic in 2006–2008	33
6.1. Aim and methodology	
6.2. Results	
7. Economics of Bt maize cultivation in the Czech Republic	35
7.1. Methodology	
7.2. Results	
7.3. Summary	
8. Conclusion	38
9. Appendix: Occurrence of the European corn borer (ECB) and its coverage with Bt maize areas in the Czech Republic	41
