

Contents

Long-term ecological research in the Czech Republic	4
Freshwater planktonic food webs	5
Basics of reservoir limnology	8
Římov Reservoir	12
Overview of long-term ecological research into the Římov Reservoir	14
Long-term changes in environmental conditions of the Římov Reservoir and its catchment	21
Long-term monitoring program and data analyses	21
Meteorological conditions and agricultural activities in the catchment	21
Reservoir hydrodynamics	22
Reservoir hydrochemistry	23
Changes in plankton communities	25
Seasonal cycle of planktonic events	26
Summary of the long-term development of the Římov Reservoir	28
Selected highlights of multidisciplinary research into the Římov Reservoir	29
Role of protists and viruses in shaping bacterioplankton community composition	29
Trophic interactions in microbial food webs	32
The role of extracellular enzymes in carbon and phosphorus cycling	35
Phytoplankton ecophysiology and seasonal dynamics	37
Seasonal dynamics and spatial distribution of zooplankton	38
Fish ecology	39
Exploring the spatial heterogeneity of the reservoir	41
Effects of high inflow episodes on reservoir ecosystem	45
Slapy Reservoir	47
Brief history of the long-term ecological research into the Slapy Reservoir	48
Long-term changes in temperature and water chemistry in the Vltava River basin	49
Pelagic food webs	51
Fish communities	53
Conclusions and future research perspectives	54
List of selected papers	55
Appendix	62
