Chapter 2: Introduction to		
	Mathematical Modeling	19
Goals,	Inputs, and Initial Exploration	24
2.1	Questions of Scale	24
2.2	Data Availability	25
Model	Selection and Design	26
2.3	Model Structure	27
2.4	System Components	30
2.5	Model Equations	35
2.6	Parameter Estimation	36
Model	Analysis and Diagnosis	37
2.7	Consistency and Robustness	38
2.8	Exploration and Validation of	
	Dynamical Features	40
Model	Use and Applications	43
2.9	Model Extensions and Refinements	43
2.10	Large-Scale Model Assessments	45
2.11	Questions of Design	46
2.12	Simplicity versus Complexity	47
Exercis	ses	49
Referen	nces	50
Further Reading 50		50
Chapt	er 3: Static Network Models	51

Chapter 3:	Static Network Models	51
Strategies of	Analysis	52
Interaction C	Graphs	53
3.1 Prop	erties of Graphs	54

3.2	Small-World Networks	58
Depen	dencies Among Network	
Compo	onents	62
3.3	Causality Analysis	62
3.4	Mutual Information	62
Bayesi	an Reconstruction of Interaction	
Netwo	rks	63
3.5	Application to Signaling Networks	66
3.6	Applications to Other Biological	
	Networks	69
Static I	Metabolic Networks and Their Analysis	69
3.7	Stoichiometric Networks	70
3.8	Variants of Stoichiometric Analysis	73
3.9	Metabolic Network Reconstruction	73
3.10	Metabolic Control Analysis	74
Exercis	ses	78
Refere	nces	80
Furthe	r Reading	82
Chant	or A. The Mathematics of	

Chapt	er 4: The Mathematics of	
	<b>Biological Systems</b>	83
Discret	te Linear Systems Models	85
4.1	<b>Recursive Deterministic Models</b>	85
4.2	<b>Recursive Stochastic Models</b>	88
Discret	te Nonlinear Systems	91
Contin	uous Linear Systems	93
4.3	Linear Differential Equations	94
4.4	Linearized Models	95
Contin	uous Nonlinear Systems	100
4.5	Ad hoc Models	101
4.6	Canonical Models	102
4.7	More Complicated Dynamical Systems Descriptions	110
Standa	rd Analyses of Biological	110
System	ns Models	110
4.8	Steady-State Analysis	110
4.9	Stability Analysis	115
4 10	Parameter Sensitivity	118

CONTENTS

4.11 Analysis of Systems Dynamics	119
Other Attractors	122
4.12 Limit Cycles	123
4.13 Chaotic Attractors	126
Exercises	128
References	132
Further Reading	133
Chapter 5: Parameter Estimation	135
Parameter Estimation for Linear Systems	136
51 Linear Regression Involving a	
Single Variable	136
5.2 Linear Regression Involving Several	
Variables	138
Parameter Estimation for Nonlinear Systems	141
5.3 Comprehensive Grid Search	143
5.4 Nonlinear Regression	145
5.5 Genetic Algorithms	146
5.6 Other Stochastic Algorithms	148
5.7 Typical Challenges	149
Parameter Estimation for Systems of	Enthe
Differential Equations	153
	160
Exercises	161
References	166
Further Reading	167
Chapter 6: Gene Systems	160
The Central Dogma	160
Key Properties of DNA and RNA	103
6.1 Chemical and Physical Features	171
6.2 Size and Organization of DNA	174
6.3 Genes and Noncoding DNA	175
6.4 Eukaryotic DNA Packing	178
6.5 Epigenetics	178
RNA Debemis v in Cardiomyocytes	178
6.6 Messenger RNA (mRNA)	179
6.7 Transfer RNA (tRNA)	182
6.8 Ribosomal RNA (rRNA)	182
6.9 Small RNAs	183
6.10 RNA Viruses	184
Gene Regulation	185
0.7	

6.11 The *lac* Operon

6.12 Modes of Regulation

186

187

6.13	Transcription Factors	188
6.14	Models of Gene Regulation	190
Measu	uring Gene Expression	191
Locali	zation of Gene Expression	194
Outloo	ok	196
Exerci	ses	196
Refere	nces	198
Furthe	er Reading	200
Chapt	er 7: Protein Systems	201
Chemi	cal and Physical Features of Proteins	202
7.1	Experimental Protein Structure Determination and Visualization	206
An Inc Functi	omplete Survey of the Roles and ons of Proteins	208
7.2	Enzymes	209
7.3	Transporters and Carriers	211
7.4	Signaling and Messenger Proteins	214
7.5	Proteins of the Immune System	215
7.6	Structure Proteins	216
Curren	t Challenges in Protein Research	218
7.7	Proteomics	218
7.8	Structure and Function Prediction	220
7.9	Localization	222
7.10	Protein Activity and Dynamics	224
Exercis	es	• 226
Referen	ices	228
