

CONTENTS

Abbreviations	5
Foreword.....	7
Introduction.....	11
Chapter 1. CHARACTERISTIC OF SULFATE-REDUCING BACTERIA	15
1.1. Diversity of sulfate-reducing bacteria	15
1.2. Substrates of sulfate-reducing bacteria in the intestine	20
1.3. Sulfate-reducing bacteria and metabolism of molecular hydrogen	23
1.4. Trophic relationships of sulfate-reducing bacteria with other microorganisms	26
1.5. Mucosal bacteria of the colon.....	29
1.6. The role of intestinal microbiota in disease development	33
1.7. Microbial communities and hydrogen sulfide concentration in large intestine of healthy people and patients with ulcerative colitis.....	38
1.8. Isolation and identification of intestinal sulfate-reducing bacteria.....	44
1.8.1. Physiological and biochemical properties.....	54
1.8.2. Sequences analysis of 16S rRNA gene	61
1.9. Statistical analysis physiological and biochemical parameters of sulfate-reducing bacteria isolated from healthy people and patients with ulcerative colitis	68
1.9.1. Cluster analysis of physiological and biochemical parameters.....	68
1.9.2. Correlation, cross-correlation and dispersion analysis of physiological and biochemical parameters	77
Chapter 2. DISSIMILATORY SULFATE REDUCTION	87
2.1. General characteristics of sulfate reduction processes: assimilation and dissimilation	87
2.2. Transport of substances and activity of adenosine-5'-triphosphatase	91
2.3. Stages of dissimilatory sulfate reduction process.....	99
2.3.1. Sulfate reduction to hydrogen sulfide	100
2.3.1.1. Sulfate activation and activity of adenosine-5'-triphosphate sulfurylase	100
2.3.1.2. Cytoplasmic reduction of adenosine-5'-phosphosulfate to sulfite	106
2.3.1.3. Cytoplasmic reduction of sulfite to hydrogen sulfide	110
2.3.2. Cytoplasmic and periplasmic oxidation of molecular hydrogen.....	118
2.3.2.1. Activity and kinetic properties of hydrogenases.....	121
2.3.3. Transmembrane electron transfer.....	125
2.3.4. Characterization of pyrophosphatases.....	128

2.4. Electron donors and their thermodynamic properties	133
2.4.1. Incomplete oxidation of lactate to acetate and CO ₂	136
2.4.1.1. Lactate dehydrogenase.....	138
2.4.1.2. Pyruvate:ferredoxin-oxidoreductase	142
2.4.1.3. Phosphotransacetylase	147
2.4.1.4. Acetate kinase	150
2.4.2. Oxidation of acetate (acetyl-CoA) to CO ₂	156
2.4.3. Oxidation of propionate	157

Chapter 3. THE EFFECT OF DIFFERENT CONDITIONS ON DISSIMILATORY SULFATE REDUCTION IN <i>DESULFOVIBRIO PIGER</i> VIB-7	159
3.1. The effect of medium pH.....	159
3.2. The effect of hydrogen sulfide.....	165
3.3. The effect of electron acceptor / donor.....	170
3.4. Kinetic characteristics of dissimilatory sulfate reduction depending on number of bacterial cells	176
3.5. Enzymes of antioxidant defense system as a mechanism for adaptation of sulfate-reducing bacteria to adverse conditions	184

Chapter 4. FUNTIONAL ROLE OF SULFATE-REDUCING BACTERIA IN THE DEVELOPMENT OF THE COLON DISEASES.....	193
4.1. The effect of final metabolites of sulfate-reducing bacteria on the colon cells	194
4.2. Experimental creation of inflammatory bowel disease model in the animals applying intestinal sulfate-reducing bacteria	202
4.3. Characterization of a <i>Desulfovibrio piger</i> Vib-7M strain able to metabolize hydrogen sulfide to cysteine	218
4.4. The characteristics of drugs applied in the bowel disease.....	227
4.5. Antimicrobial effect of salicylamide derivatives against intestinal sulfate-reducing bacteria.....	233

Chapter 5. GENERALIZATION AND CONCLUSIONS.....	245
