# GUIDEBOOK 2 – DESIGN OF BRIDGES

## CONTENTS

Foreword	3
Contents	5
Chapter 1: Basic requirements	7
Chapter 2: Basis of design – methodological aspects	15
Appendix A to Chapter 2 – Principles of probabilistic optimization	27
Chapter 3: Static loads due to traffic	33
Appendix A to Chapter 3 – Development of static load traffic models for road bridges of EN 1991-2	63
Chapter 4: Fatigue loads due to traffic	79
Appendix A to Chapter 4 – Vehicle interactions and fatigue assessments	99
Chapter 5: Non traffic actions	105
Chapter 6: Accidental actions	119
Chapter 7: Combination rules for bridges in Eurocodes	134
Chapter 8: Case study - Design of a concrete bridge	147
Chapter 9: Case study – Design of a steel bridge	165
Chapter 10: Case study - Design of a composite bridge	191
Annex A: Effects of LHVs on road bridges and EN1991-2 load models	209
Annex B: Actions and combination rules for cranes, masts, towers and pipelines	221
