

LIST OF CONTRIBUTIONS

<i>Lukáš Adam, Václav Šmídl</i> Time optimal control: Application to LCL filters	44
<i>Wolfgang Achtziger, Robert Baier, Elza Farkhi, Vera Roshchina</i> On Optimality Conditions for Constrained Nonsmooth Optimization Based on the Directed Subdifferential ..	37
<i>Davaatseren Baatar, Steven Edwards, Kate Smith-Miles</i> Liquid Handling Robot Scheduling in slide staining instrument for cancer diagnostics	34
<i>Robert Baier, Elza Farkhi, Vera Roshchina</i> Calculating the Nonconvex Rubinov Subdifferential for Generalized Quasidifferentiable Functions Without a D.C. Representation	36
<i>Matus Benko, Helmut Gfrerer, Jiří Outrata</i> Calculus for directional limiting normal cones and subgradients	29
<i>Petr Beremlijski, Jaroslav Haslinger, Jiří Outrata, R. Pathó</i> On solution of contact shape optimization problems with Coulomb friction and a solution-dependent friction coefficient	14
<i>Martin Branda, Lukáš Adam</i> Recent advances in optimality conditions for nonlinear chance constrained problems with an application to energy sector	48
<i>Max Bucher, Martin Branda, Michal Červinka, Alexandra Schwartz</i> Regularization for a Complementarity Formulation of Cardinality Constrained Optimization Programs	31
<i>Rubén Campoy, Francisco J. Aragón Artacho</i> Modifying the Douglas–Rachford algorithm for solving best approximation problems	12
<i>Francesco Caruso, Maria Carmela Ceparano, Jacqueline Morgan</i> Proximal approach in selection of subgame perfect Nash equilibria	26
<i>Radek Cibulka</i> On Uniform Metric Regularity	45
<i>Nicusor Costea, Ariana Pitea</i> Existence results for mixed hemivariational-like inequalities involving set-valued maps	24
<i>Stephan Dempe, Nguyen Dinh, Joydeep Dutta, Tanushree Pandit</i> Simple Bilevel Programming and Extensions: Theory and Algorithms	26
<i>Axel Dreves, Nathan Sudermann-Merx</i> Solving linear generalized Nash equilibrium problems numerically	19
<i>Marian Fabian</i> On primal regularity estimates for set-valued mappings	30
<i>Elza Farkhi, Robert Baier, Vera Roshchina</i> The Directed Subdifferential of DC and Quasidifferentiable Functions	36
<i>Sjur Didrik Flam, Sjur Didrik Flam</i> Convolution, Non-transferable Utility, and Money	28
<i>Elif Garajová, Milan Hladík</i> Approximating the Optimal Value Range in Interval Linear Programming	42
<i>Helmut Gfrerer, Boris S. Mordukhovich</i> Stability Analysis for Parameterized Equilibria with Conic Constraints	50
<i>Miguel A. Goberna, Andrea Ridolfi, Virginia N. Vera de Serio</i> Duality gap in linear optimization: stability and generic results	39

Harald Günzel Stationary Point Set: Topological Universality of Convex Quadratic Problems	51
Joachim Gwinner Parameter Identification in Elliptic Variational Inequalities	15
Felix Harder, Gerd Wachsmuth A bilevel optimal control problem with PDEs	27
Didier Henrion, Martin Kružík, Tillmann Weisser Optimal control problems with oscillations, concentrations, and discontinuities	14
René Henrion A friendly tour through the world of calmness	10
Daniel Hernandez Escobar, Jan-Joachim Rückmann Strong Stability of degenerated C-stationary points in MPCC	38
Milan Hladík Tolerances, robustness and parametrization of matrix properties related to optimization problems	42
Seyedehsomyeh Hosseini Convergence of nonsmooth descent methods via Kurdyka-Lojasiewicz inequality on Riemannian manifolds ..	49
Andrey Ivanov, A.I. Zhdanov A Direct Projection Method for the Block Kaczmarz Algorithm	12
Alejandro Jofré, Abderrahim Jourani Characterizations of the Free Disposal Condition for Nonconvex Economies on Infinite Dimensional Commodity Spaces	25
Abderrahim Jourani Restricted subdifferential and value function	29
Vlasta Kaňková Scenario Generation and Empirical Estimation in Stochastic Optimization Problems: Survey and Open Questions	17
Christian Kanzow, Veronika Karl, Daniel Steck, Daniel Wachsmuth A Multiplier-Penalty-Method for Generalized Nash Equilibrium Problems in Banach Spaces	19
Kamil A. Khan Sufficient conditions for Whitney differentiability of optimal-value functions for convex programs	38
Peter Kirst, Oliver Stein Global optimization of generalized semi-infinite programs using disjunctive programming	32
Diethard Klatte Parametric optimization and variational problems involving polyhedral multifunctions	43
Martin Knossalla A Bundle Trust-Region Method for Marginal Functions Using Continuous Outer Subdifferentials	37
Michal Kočvara New numerical tools for very large scale topology optimization	35
Alexander Kruger Parametric Error Bounds and Metric Subregularity	23
Jean-Michel Lagniel On the use of optimization techniques in the field of particle accelerators	33
Felipe Lara, Alfredo Iusem Quadratic fractional programming under asymptotic analysis	28

Enrique Lemus-Rodríguez Markov Decision Processes: Stability and Well-posedness	17
Marco Antonio López-Cerdá, M.J. Cánovas, J.A.J. Hall, Juan Parra López Calmness of partially perturbed linear systems. An application to the convergence analysis of the central path	46
Ivo Marinić-Kragić, Damir Vučina Global shape optimization methods based on surrogate models for the case of B-spline shape parameterization	15
Patrick Mehlitz On the restrictiveness of sequential normal compactness in function spaces	11
Quentin Mercier, Fabrice Poirion, Jean-Antoine Désidéri A gradient-based method for multiobjective optimization problems under uncertainties	49
Tangi Migot, J.P. Dussault, M. Haddou, A. Kadrani Computation of a Local Minimum of the MPCC	11
Eman Mohamed, Mohamed A. Ismail, Alyaa R. Zahran Short Term Forecasting for Electricity Demand in Egypt	48
Robert Mohr, Oliver Stein Adaptive Dynamic Subsampled Trust-Region Algorithm	33
Boris Mordukhovich Critical Multipliers in Parametric Variational Systems	52
Jacqueline Morgan, M.B. Lignola Optima and equilibria: new inner regularizations	27
Amin Mostafaei, Milan Hladík Inverse interval linear programming problem	42
Luka Neralić, Rajiv D. Banker, Karlo Kotarac Sensitivity and stability in stochastic data envelopment analysis	28
Christoph Neumann, Oliver Stein, Nathan Sudermann-Merx A feasible rounding approach for mixed-integer optimization problems: algorithmic aspects and applications	40
Hieu Thao Nguyen, Russell Luke On necessary conditions for linear convergence of fixed-point iterations	13
Daniel Nowak, Alexandra Schwartz A Generalized Nash Game for Computation Offloading with an Extension to an MPEC/EPEC Structure	19
Jiří Outrata, Helmut Gfrerer On two variants of calmness and their verification in a class of solution maps	50
Morteza Oveisiha Pascoletti-Serafini scalarization method and vector optimization problems with variable ordering structure	21
Juan Parra López, M.J. Cánovas, Jan-Joachim Rückmann, F. Javier Toledo Merelo Point-based neighborhoods for sharp calmness constants in linear programming	46
Pedro Pérez-Aros, Rafael Correa, Abderrahim Hantoute Sequential and exact formulae for the subdifferential of nonconvex integrand functionals	29
Miroslav Pištěk, D. Aussel, R. Henrion Best Response of Producer in Pay-as-clear Electricity Market	48
Ariana Pitea, Tadeusz Antczak Multiobjective variational problems in a geometric setting	21
Héctor Ramírez Cabrera, Boris S. Mordukhovich, Jiří Outrata Graphical Derivatives and Stability Analysis for Parameterized Equilibria with Conic Constraints	50

Stefan Ratschan Parametric Optimization From the View of Computational Logic	33
Werner Roemisch, R. Henrion Stability-based scenario generation in stochastic optimization	18
David Salas Convex smooth-like properties and Faces Radon-Nikodym property in Banach spaces	24
Vladimir Shikhman, Dominik Dorsch, Hubertus Th. Jongen, Jan-Joachim Rückmann On the local representation of piecewise smooth equations as a Lipschitz manifold	51
Klaus Schittkowski, Oliver Exler, Thomas Lehmann A Trust-Region-SQP Algorithm for the Efficient Solution of Non-Convex, Non-Relaxable Mixed-Integer Nonlinear Programming Problems	40
Alexandra Schwartz, Anne Tabbert Modeling Truss Structures using Vanishing and Cardinality Constraints	31
Yavendra Singh, S. K. Mishra Lagrange type duality and saddle point optimality criteria for mathematical programming problems with vanishing constraints	11
Majid Soleimani-damaneh, Ashkan Mohammadi Vector optimization in real linear spaces: The role of core convex topology	22
Sonja Steffensen, Martin Gugat Dynamic boundary control game with a star of vibrating strings	20
Peter Stechliniski, Amir Akbari, Johannes Jaschke, Kamil A. Khan, Paul I. Barton Computing Generalized Derivative Elements of Nonlinear Programs	38
Oliver Stein, Christoph Neumann, Nathan Sudermann-Merx A feasible rounding approach for mixed-integer optimization problems: theoretical aspects	40
Nathan Sudermann-Merx, Oliver Stein Noncooperative Transportation Problem	28
F. Javier Toledo Melero, M.J. Gisbert Francés, M.J. Cánovas, Juan Parra López Calmness moduli from below and above of the optimal value function in linear programming	46
Bao Truong, Christiane Tammer, Marcus Hillmann Subdifferentials of nonlinear scalarization functions and applications	21
Tuomo Valkonen, Christian Clason Primal-dual extragradient methods and stability of nonlinear nonsmooth PDE-constrained optimisation	49
Jose Vidal, María Dolores Fajardo Gómez Fenchel-Lagrange c-conjugate duality in infinite convex optimization	24
Emilio Vilches, Abderrahim Jourani Moreau-Yosida Regularization of State-Dependent Sweeping Processes with Nonregular Sets	44
Ralf Werner, Daniel Krause, Matthias Scherer, Jonas Schwinn Efficient membership testing for the correlation polytope by column generation	17
Jane Ye, Jinchuan Zhou On Mathematical Programs with Second-Order Cone Complementarity Constraints: Necessary Optimality Conditions and Constraint Qualifications	32
