<i>List of Figures</i>	<i>ix</i>
<i>List of Tables</i>	<i>xi</i>
<i>Biography</i>	<i>xv</i>
<i>Acknowledgments</i>	<i>xvii</i>
1. Introduction	1
References	5
2. A brief overview of the chain forage—milking animal—milk	7
2.1 Forages	7
2.2 Main processes during forage ensiling	12
2.3 Main processes in the rumen of milking animals	17
References	21
3. Desirable compounds	23
3.1 The effects of forages on the fatty acid composition of milk fat	24
3.2 Vitamins and provitamins	59
3.3 Carotenoids	86
3.4 Phytoestrogens	94
References	111
4. Detrimental compounds and bacteria	125
4.1 Mycotoxins	126
4.2 Alkaloids	154
4.3 Ptaquiloside from bracken fern	162
4.4 Carry-over of harmful bacteria from silage to milk	163
References	167
5. Volatiles affecting the flavor of milk and milk products	175
5.1 Characteristics of volatiles	177
5.2 Volatiles in fresh forages	181
5.3 Volatiles in hay and silage	182
5.4 Metabolism of alcohols in ruminants	188
5.5 Volatiles in cows milk	189
5.6 Volatiles in cheeses from cows milk	193

5.7	Volatiles in goats and ewes milk and cheeses	198
5.8	Conclusions	200
	References	202
6.	Conclusions	207
6.1	Fatty acid profile of milk fat	207
6.2	Vitamins	209
6.3	Carotenoids	210
6.4	Phytoestrogens	211
6.5	Mycotoxins	212
6.6	Alkaloids	213
6.7	Ptaquiloside from bracken fern	214
6.8	Carry-over of harmful bacteria from silage to milk	215
6.9	Volatiles affecting the flavor of milk and milk products	216
