Preface

xiii

Part 1 Introduction

1

1 Why do a risk analysis?

3

- 1.1 Moving on from “What If” Scenarios 3
- 1.2 The Risk Analysis Process 5
- 1.3 Risk Management Options 7
- 1.4 Evaluating Risk Management Options 10
- 1.5 Inefficiencies in Transferring Risks to Others 11
- 1.6 Risk Registers 13

2 Planning a risk analysis

21

- 2.1 Questions and Motives 21
- 2.2 Determine the Assumptions that are Acceptable or Required 22
- 2.3 Time and Timing 23
- 2.4 You’ll Need a Good Risk Analyst or Team 23

3 The quality of a risk analysis

29

- 3.1 The Reasons Why a Risk Analysis can be Terrible 29
- 3.2 Communicating the Quality of Data Used in a Risk Analysis 31
- 3.3 Level of Criticality 34
- 3.4 The Biggest Uncertainty in a Risk Analysis 35
- 3.5 Iterate 36

4 Choice of model structure

37

- 4.1 Software Tools and the Models they Build 37
- 4.2 Calculation Methods 42
- 4.3 Uncertainty and Variability 47
- 4.4 How Monte Carlo Simulation Works 57
- 4.5 Simulation Modelling 63

5 Understanding and using the results of a risk analysis

67

- 5.1 Writing a Risk Analysis Report 67
- 5.2 Explaining a Model’s Assumptions 69

5.3	Graphical Presentation of a Model's Results	70
5.4	Statistical Methods of Analysing Results	91
Part 2	Introduction	109
6	Probability mathematics and simulation	115
6.1	Probability Distribution Equations	115
6.2	The Definition of "Probability"	118
6.3	Probability Rules	119
6.4	Statistical Measures	137
7	Building and running a model	145
7.1	Model Design and Scope	145
7.2	Building Models that are Easy to Check and Modify	146
7.3	Building Models that are Efficient	147
7.4	Most Common Modelling Errors	159
8	Some basic random processes	167
8.1	Introduction	167
8.2	The Binomial Process	167
8.3	The Poisson Process	176
8.4	The Hypergeometric Process	183
8.5	Central Limit Theorem	188
8.6	Renewal Processes	190
8.7	Mixture Distributions	193
8.8	Martingales	194
8.9	Miscellaneous Examples	194
9	Data and statistics	207
9.1	Classical Statistics	208
9.2	Bayesian Inference	215
9.3	The Bootstrap	246
9.4	Maximum Entropy Principle	254
9.5	Which Technique Should You Use?	255
9.6	Adding uncertainty in Simple Linear Least-Squares Regression Analysis	256
10	Fitting distributions to data	263
10.1	Analysing the Properties of the Observed Data	264
10.2	Fitting a Non-Parametric Distribution to the Observed Data	269
10.3	Fitting a First-Order Parametric Distribution to Observed Data	281
10.4	Fitting a Second-Order Parametric Distribution to Observed Data	297
11	Sums of random variables	301
11.1	The Basic Problem	301
11.2	Aggregate Distributions	305

12	Forecasting with uncertainty	321
12.1	The Properties of a Time Series Forecast	322
12.2	Common Financial Time Series Models	327
12.3	Autoregressive Models	335
12.4	Markov Chain Models	339
12.5	Birth and Death Models	343
12.6	Time Series Projection of Events Occurring Randomly in Time	345
12.7	Time Series Models with Leading Indicators	348
12.8	Comparing Forecasting Fits for Different Models	351
12.9	Long-Term Forecasting	352
13	Modelling correlation and dependencies	353
13.1	Introduction	353
13.2	Rank Order Correlation	356
13.3	Copulas	367
13.4	The Envelope Method	380
13.5	Multiple Correlation Using a Look-Up Table	391
14	Eliciting from expert opinion	393
14.1	Introduction	393
14.2	Sources of Error in Subjective Estimation	394
14.3	Modelling Techniques	401
14.4	Calibrating Subject Matter Experts	412
14.5	Conducting a Brainstorming Session	414
14.6	Conducting the Interview	416
15	Testing and modelling causal relationships	423
15.1	<i>Campylobacter</i> Example	424
15.2	Types of Model to Analyse Data	426
15.3	From Risk Factors to Causes	427
15.4	Evaluating Evidence	429
15.5	The Limits of Causal Arguments	429
15.6	An Example of a Qualitative Causal Analysis	430
15.7	Is Causal Analysis Essential?	434
16	Optimisation in risk analysis	435
16.1	Introduction	435
16.2	Optimisation Methods	436
16.3	Risk Analysis Modelling and Optimisation	439
16.4	Working Example: Optimal Allocation of Mineral Pots	444
17	Checking and validating a model	451
17.1	Spreadsheet Model Errors	451
17.2	Checking Model Behaviour	456
17.3	Comparing Predictions Against Reality	460

18	Discounted cashflow modelling	461
18.1	Useful Time Series Models of Sales and Market Size	463
18.2	Summing Random Variables	466
18.3	Summing Variable Margins on Variable Revenues	467
18.4	Financial Measures in Risk Analysis	469
19	Project risk analysis	473
19.1	Cost Risk Analysis	474
19.2	Schedule Risk Analysis	478
19.3	Portfolios of risks	486
19.4	Cascading Risks	487
20	Insurance and finance risk analysis modelling	493
20.1	Operational Risk Modelling	493
20.2	Credit Risk	494
20.3	Credit Ratings and Markov Chain Models	499
20.4	Other Areas of Financial Risk	503
20.5	Measures of Risk	503
20.6	Term Life Insurance	506
20.7	Accident Insurance	509
20.8	Modelling a Correlated Insurance Portfolio	511
20.9	Modelling Extremes	512
20.10	Premium Calculations	513
21	Microbial food safety risk assessment	517
21.1	Growth and Attenuation Models	519
21.2	Dose–Response Models	527
21.3	Is Monte Carlo Simulation the Right Approach?	532
21.4	Some Model Simplifications	533
22	Animal import risk assessment	537
22.1	Testing for an Infected Animal	539
22.2	Estimating True Prevalence in a Population	544
22.3	Importing Problems	553
22.4	Confidence of Detecting an Infected Group	556
22.5	Miscellaneous Animal Health and Food Safety Problems	559
I	Guide for lecturers	567
II	About ModelRisk	569
III	A compendium of distributions	585
III.1	Discrete and Continuous Distributions	585
III.2	Bounded and Unbounded Distributions	586
III.3	Parametric and Non-Parametric Distributions	587
III.4	Univariate and Multivariate Distributions	588

III.5	Lists of Applications and the Most Useful Distributions	588
III.6	How to Read Probability Distribution Equations	593
III.7	The Distributions	599
III.8	Introduction to Creating Your Own Distributions	696
III.9	Approximation of One Distribution with Another	703
III.10	Recursive Formulae for Discrete Distributions	710
III.11	A Visual Observation On The Behaviour Of Distributions	713
IV	Further reading	715
V	Vose Consulting	721
	References	725
	Index	729
