

Brief Contents

An Introduction to the Science of Genetics

- Chapter 1 The Science of Genetics 3
- Chapter 2 Reproduction as the Basis of Heredity 22

Classical Genetic Analysis

- Chapter 3 Mendelism: The Basic Principles of Inheritance 52
- Chapter 4 Extensions of Mendelism 72
- Chapter 5 Inheritance of Complex Traits 91
- Chapter 6 The Chromosomal Basis of Mendelism 116
- Chapter 7 Variation in Chromosome Number and Structure 138
- Chapter 8 Linkage, Crossing Over, and Chromosome Mapping in Eukaryotes 167
- Chapter 9 Advanced Linkage Analysis 190

The Molecular Biology of Genes

- Chapter 10 DNA and the Molecular Structure of Chromosomes 219
- Chapter 11 Replication of DNA and Chromosomes 255
- Chapter 12 Transcription and RNA Processing 292
- Chapter 13 Translation and the Genetic Code 326
- Chapter 14 Mutation, DNA Repair, and Recombination 358
- Chapter 15 Definitions of the Gene 397

The Genetics of Viruses, Bacteria, Transposons, and Eukaryotic Organelles

- Chapter 16 The Genetics of Viruses 429
- Chapter 17 The Genetics of Bacteria 453
- Chapter 18 Transposable Genetic Elements 476
- Chapter 19 The Genetics of Mitochondria and Chloroplasts 496

Molecular Genetic Analysis

- Chapter 20 The Techniques of Molecular Genetics 517
- Chapter 21 Genomics 553
- Chapter 22 Molecular Analysis of Genes and Gene Products 585

The Regulation of Gene Expression

- Chapter 23 Regulation of Gene Expression in Prokaryotes and Their Viruses 615
- Chapter 24 Regulation of Gene Expression in Eukaryotes 644

The Genetic Control of Biological Processes

- Chapter 25 The Genetic Control of Animal Development 675
- Chapter 26 The Genetic Control of Behavior 710
- Chapter 27 The Genetic Control of the Vertebrate Immune System 728
- Chapter 28 The Genetic Basis of Cancer 750

The Genetics of the Evolutionary Process

- Chapter 29 Population and Evolutionary Genetics 774

Epilogue by James F. Crow 807

Contents

An Introduction to the Science of Genetics

A Conversation with Valery N. Soyfer 1

1 THE SCIENCE OF GENETICS 3

A Passion for Experimenting 3

Classical and Molecular Genetics 4

Genetics in the News 5

Genetics and Medicine 7

Genetics and Modern Agriculture 11

Genetics and Society 15

The Principles of Genetics: An Overview 16

DNA: The Genetic Material 17

DNA Replication: Transmission of Genetic Information 17

Gene Expression: Control of Growth and Development 18

Mutation: Changes in the Genetic Material over Time 20

Human Genetics Sidelight: Hemophilia:

Successful Treatment of a Once Deadly Disorder 10

2 REPRODUCTION AS THE BASIS OF HEREDITY 22

An Accident in Cell Division 22

The Cell as the Basic Unit of Life 23

The Prokaryotic Cell 23

The Eukaryotic Cell 24

The Chromosome: An Overview 27

The Cell Cycle 28

Cell Division: Mitosis 28

Cell Division: Meiosis 32

Meiotic Abnormalities 37

The Evolutionary Significance of Meiosis 37

The Formation and Union of Gametes 37

Oogenesis: The Formation of the Egg 38

Spermatogenesis: The Formation of Sperm 39

Gamete Formation in Plants 40

The Life Cycles of Some Genetically Important Organisms 40

Neurospora crassa: The Simple Bread Mold 41

Saccharomyces cerevisiae: Baker's Yeast 43

Zea mays: Corn 44

Drosophila melanogaster: The Fruit Fly 45

Humans 46

Technical Sidelight: Dolly: To Clone or Not to Clone 42

Classical Genetic Analysis

A Conversation with Joseph G. Gall 50

3 MENDELISM:

THE BASIC PRINCIPLES OF INHERITANCE 52

The Birth of Genetics: A Scientific Revolution 52

Mendel's Study of Heredity 53

Mendel's Experimental Organism, the Garden Pea 53

Monohybrid Crosses: The Principles of Dominance and Segregation 54

Dihybrid Crosses: The Principle of Independent Assortment 56

Applications of Mendel's Principles 58

The Punnett Square Method 58

The Forked-Line Method 59

The Probability Method 59

Formulating and Testing Genetic Hypotheses 61

The Chi-Square Test 62

Mendelian Principles in Human Genetics 64

Pedigrees 64

Mendelian Segregation in Human Families 65

Genetic Counseling 66

Technical Sidelight: The Multiplicative and Additive Rules of Probability 61

Technical Sidelight: Binomial Probabilities 67

4 EXTENSIONS OF MENDELISM 72

Genetics Grows Beyond Mendel's

Monastery Garden 72

Allelic Variation and Gene Function 73

Incomplete Dominance and Codominance 73

Multiple Alleles 74

Allelic Series 75

Testing Gene Mutations for Allelism 75

Variation Among the Effects of Mutations 76

Genes Function to Produce Polypeptides 77

Why Are Some Mutations Dominant and Others Recessive? 79

Gene Action: From Genotype to Phenotype 80

Influence of the Environment 80

Environmental Effects on the Expression of Human Genes 81

Penetrance and Expressivity 81

Gene Interactions 82

Epistasis	84	Color Blindness, an X-Linked Vision Disorder	127
Pleiotropy	86	The Fragile X Syndrome and Mental Retardation	127
The Genetic Basis of Continuous Phenotypic Variation	86	Genes on the Human Y Chromosome	128
Historical Sidelight: Genetic Symbols: Evolution in a Dynamic Science	78	Genes on Both the X and Y Chromosomes	128
Human Genetics Sidelight: The Hapsburg Jaw: A Dominant Trait with Incomplete Penetrance and Variable Expressivity in the European Nobility	83	Sex Chromosomes and Sex Determination	128
5 INHERITANCE OF COMPLEX TRAITS	91	Sex Determination in Human Beings	129
Cardiovascular Disease: A Combination of Genetic and Environmental Factors	91	Sex Determination in <i>Drosophila</i>	130
Complex Patterns of Inheritance	92	Sex Determination in Other Animals	131
Quantitative Traits	92	Dosage Compensation of X-Linked Genes	132
Threshold Traits	95	Hyperactivation of X-Linked Genes in Male <i>Drosophila</i>	133
Statistics of Quantitative Genetics	97	Inactivation of X-Linked Genes in Female Mammals	133
Frequency Distributions	97	Historical Sidelight: <i>Drosophila</i> , T. H. Morgan, and "The Fly Room"	122
The Mean and the Modal Class	98	7 VARIATION IN CHROMOSOME NUMBER AND STRUCTURE	138
The Variance and the Standard Deviation	98	Chromosomes, Agriculture, and Civilization	138
Analysis of Quantitative Traits	99	Cytological Techniques	139
The Multiple Factor Hypothesis	99	Analysis of Mitotic Chromosomes	139
Partitioning the Phenotypic Variance	100	The Human Karyotype	141
Broad-Sense Heritability	101	Cytogenetic Variation: An Overview	142
Narrow-Sense Heritability	102	Polyploidy	143
Predicting Phenotypes	103	Sterile Polyploids	144
Artificial Selection	104	Fertile Polyploids	145
Quantitative Trait Loci	105	Chromosome Doubling and the Origin of Polyploids	146
Inbreeding and the Resemblance Between Relatives	107	Experimental Production of Polyploids	147
The Effects of Inbreeding	107	Tissue-Specific Polyploidy and Polyteny	148
Genetic Analysis of Inbreeding	109	Aneuploidy	149
Correlations Between Relatives	112	Trisomy in Human Beings	150
Human Genetics Sidelight: Genetic Counseling and Multifactorial Traits	96	Monosomy	152
Technical Sidelight: Artificial Selection for Body Size	106	Deletions and Duplications of Chromosome Segments	153
6 THE CHROMOSOMAL BASIS OF MENDELISM	116	Rearrangements of Chromosome Structure: An Overview	156
Sex, Chromosomes, and Genes	116	Inversions	156
Chromosomes	117	Translocations	157
Chromosome Number	117	Compound Chromosomes and Robertsonian Translocations	159
Sex Chromosomes	117	Phenotypic Effects of Chromosome Rearrangements	162
The Chromosome Theory of Heredity	119	Human Genetics Sidelight: Amniocentesis and Chorionic Biopsy: Procedures to Detect Aneuploidy in Human Fetuses	154
Experimental Evidence Linking the Inheritance of Genes to Chromosomes	119	Technical Sidelight: <i>Oenothera</i> : Chromosome Rings and Other Things	160
Chromosomes as Arrays of Genes	120	8 LINKAGE, CROSSING OVER, AND CHROMOSOME MAPPING IN EUKARYOTES	167
Nondisjunction as Proof of the Chromosome Theory	121	The World's First Chromosome Map	167
The Chromosomal Basis of Mendel's Principles of Segregation and Independent Assortment	123	Linkage, Recombination, and Crossing Over	168
Sex-Linked Genes in Human Beings	126		
Hemophilia, an X-Linked Blood-Clotting Disorder	126		

Exceptions to the Mendelian Principle of Independent Assortment	168
Frequency of Recombination as a Measure of Linkage Intensity	169
Crossing Over as the Physical Basis of Recombination	171
Evidence That Crossing Over Causes Recombination	172
Chiasmata and the Time of Crossing Over	173
Chromosome Mapping	174
Crossing Over as a Measure of Genetic Distance	174
Recombination Mapping with a Two-Point Testcross	175
Recombination Mapping with a Three-Point Testcross	176
Recombination Frequency and Genetic Map Distance	180
Chiasma Frequency and Genetic Map Distance	182
Genetic Distance and Physical Distance	182
Recombination and Evolution	183
Evolutionary Significance of Recombination	183
Suppression of Recombination by Inversions	184
Genetic Control of Recombination	185
<i>Human Genetics Sidelight: Evidence for Linkage Between the Genes for Hemophilia and Color Blindness</i>	178

9 ADVANCED LINKAGE ANALYSIS 190

Huntington's Disease: A Challenge in Gene Mapping	190
Detection of Linkage in Experimental Organisms	191
Tetrad Analysis to Detect Linkage in Fungi	191
Balancer Chromosome Technique to Assign a Gene to a Chromosome in <i>Drosophila</i>	194
Specialized Mapping Techniques	196
Centromere Mapping with Ordered Tetrads in <i>Neurospora</i>	196
Cytogenetic Mapping with Deletions and Duplications in <i>Drosophila</i>	198
Linkage Analysis in Humans	201
Detection of Linked Loci by Pedigree Analysis	201
Somatic-Cell Genetics: An Alternative Approach to Gene Mapping	204
The Human Gene Map	211

The Molecular Biology of Genes

A Conversation with Edward B. Lewis 217

10 DNA AND THE MOLECULAR STRUCTURE OF CHROMOSOMES 219

Discovery of Nuclein 219

Functions of the Genetic Material	220
Proof That Genetic Information Is Stored in DNA	220
Discovery of Transformation in Bacteria	220
Proof That DNA Mediates Transformation	222
Proof That DNA Carries the Genetic Information in Bacteriophage T2	222
Proof That RNA Stores the Genetic Information in Some Viruses	224
The Structures of DNA and RNA	225
Nature of the Chemical Subunits in DNA and RNA	225
DNA Structure: The Double Helix	225
DNA Structure: Alternate Forms of the Double Helix	230
DNA Structure: Negative Supercoils in Vivo	232
Chromosome Structure in Prokaryotes and Viruses	233
Chromosome Structure in Eukaryotes	234
Chemical Composition of Eukaryotic Chromosomes	235
One Large DNA Molecule per Chromosome	236
Three Levels of DNA Packaging in Eukaryotic Chromosomes	239
Centromeres and Telomeres	242
Eukaryotic Genomes: Repeated DNA Sequences	246
Detection of Repeated Sequences: DNA Renaturation Kinetics	246
Localization of Repeated DNA Sequences in Chromosomes	249
Repeated Sequences in the Human Genome	251
<i>Technical Sidelight: DNA Renaturation Kinetics</i>	248

11 REPLICATION OF DNA AND CHROMOSOMES 255

Monozygotic Twins: Are They Identical?	255
Basic Features of DNA Replication In Vivo	256
Semiconservative Replication	256
Visualization of Replication Forks by Autoradiography	259
Unique Origins of Replication	262
Bidirectional Replication	263
DNA Polymerases and DNA Synthesis In Vitro	264
Discovery of DNA Polymerase I in <i>Escherichia coli</i>	266
Multiple DNA Polymerases	267
DNA Polymerase III: The Replicase in <i>Escherichia coli</i>	269
Proofreading Activities of DNA Polymerases	270
The Complex Replication Apparatus	271
Continuous Synthesis of One Strand; Discontinuous Synthesis of the Other Strand	272

- Covalent Closure of Nicks in DNA
by DNA Ligase 273
- Initiation of DNA Chains with RNA Primers 273
- Unwinding DNA with Helicases,
DNA-Binding Proteins, and Topoisomerases 275
- The Replication Apparatus: Prepriming Proteins,
Primosomes, and Replisomes 277
- Rolling-Circle Replication 280

Unique Aspects

- of Eukaryotic Chromosome Replication 280
- The Cell Cycle 281
- Multiple Replicons per Chromosome 281
- Two DNA Polymerases at a Single
Replication Fork 283
- Duplication of Nucleosomes
at Replication Forks 284
- Telomerase: Replication of Chromosome
Termini 284
- Telomere Length and Aging in Humans 285

Technical Sidelight: Cesium Chloride Equilibrium

- Density-Gradient Centrifugation and Sucrose Velocity
- Density-Gradient Centrifugation:
Two Important and Distinct Tools 260

12 TRANSCRIPTION AND RNA PROCESSING 292

- Storage and Transmission of Information
with Simple Codes 292
- The Genetic Control of Metabolism:
An Overview 293
- Transfer of Genetic Information:
The Central Dogma 294
 - Transcription and Translation 294

of 5' Methyl Guanosine Caps 308
 - Termination by Chain Cleavage and the Addition
of 3' Poly(A) Tails 310
 - RNA Editing: Altering the Information Content
of mRNA Molecules 310

- Interrupted Genes in Eukaryotes: Exons and
Introns 312
 - Early Evidence for Noncoding Sequences
in Eukaryotic Genes 313
 - Some Very Large Eukaryotic Genes 315
 - Introns: Biological Significance? 316
- Removal of Intron Sequences by RNA Splicing 317
 - tRNA Precursor Splicing: Unique Nuclease
and Ligase Activities 318
 - Autocatalytic Splicing 319
 - Pre-mRNA Splicing: snRNAs, snRNPs,
and the Spliceosome 320
- Technical Sidelight: An mRNA Intermediary:
Evidence from Phage-Infected *E. coli* 299

13 TRANSLATION AND THE GENETIC CODE 326

- Sickle-Cell Anemia: Devastating Effects
of a Single Base-Pair Change 326
- Protein Structure 327
 - Polypeptides: Twenty Different Amino
Acid Subunits 327
 - Proteins: Complex Three-Dimensional
Structures 329
- Protein Synthesis: Translation 331
 - Overview of Protein Synthesis 331
 - Components Required for Protein Synthesis:
Ribosomes and Transfer RNAs 332
 - Translation: The Synthesis of Polypeptides
Using mRNA Templates 337
- The Genetic Code 344
 - Properties of the Genetic Code: An Overview 344
 - Three Nucleotides per Codon 344
 - Deciphering the Code 346
 - Initiation and Termination Codons 349
 - A Degenerate and Ordered Code 350
 - A Nearly Universal Code 351
- Codon-tRNA Interactions 352
 - Recognition of Codons by tRNAs:
The Wobble Hypothesis 352
 - Suppressor Mutations That Produce tRNAs
with Altered Codon Recognition 352
- In Vivo Confirmation of the Nature
of the Genetic Code 354
- Technical Sidelight: Cracking the Genetic Code:
Synthetic mRNAs 348
- Historical Sidelight: Hannah Bernstein and the
Amber Codon 351

14 MUTATION, DNA REPAIR, AND RECOMBINATION 358

- Xeroderma Pigmentosum: Defective Repair
of Damaged DNA in Humans 358
- Mutation: Source of the Genetic Variability Required
for Evolution 359

Mutation: Basic Features of the Process	360
Mutation: Somatic or Germinal	360
Mutation: Spontaneous or Induced	360
Mutation: Usually a Random, Nonadaptive Process	361
Mutation: A Reversible Process	362
Mutation: Phenotypic Effects	363
Mutations with Phenotypic Effects: Usually Deleterious and Recessive	364
Effects of Mutations in Human Globin Genes	364
Mutation in Humans: Blocks in Metabolic Pathways	366
Conditional Lethal Mutations: Powerful Tools for Genetic Studies	369
