

Contents

1 Fish diversity

1.1 Summary

1.2 Introduction

1.3 Classification

1.3.1 Jawless fish

1.3.2 Jawed fish

1.3.3 Class Chondrichthyes and Class Osteichthyes

1.3.4 Class Sarcopterygii

1.3.5 Class Actinopterygii

1.3.6 The relict fish

1.3.7 Teleosts

1.3.8 Teleost classification

1.4 Variety in fish structure and function

1.4.1 Diversity in size and longevity

1.4.2 Diversity in habitat

1.4.3 Diversity in shape

1.4.4 Diversity in colour

1.4.5 Diversity in numbers

Appendix

1.1 The embryonic layers of animals

1.2 A summary of fish classification systems (jawed fish only)

1.3 Examples of confusion in the use of common names

1.4 Further conventions and explanations in the use of naming taxonomy

1.5 The concept of persistence of larval traits in an animal which is sexually mature

Bibliography

2 The integument

2.1 Summary

2.2 Introduction

2.3 Fish skin structure

2.3.1 Epidermis

2.3.2 Dermis

2.3.3 Hypodermis

2.4	Fish scales	34
2.5	Bony plates and scutes	37
2.6	Skin colour	38
2.6.1	The physical basis for colour: chromatophores	39
2.6.2	Dark colouration	39
2.6.3	Red, orange and yellow colouration	40
2.6.4	Blue and green colouration	40
2.6.5	Silver and white colouration	40
2.7	Habitat and colour	41
2.8	Abnormal skin colour	41
2.9	Colour change	41
2.10	Skin variability	43
2.11	Skin responses to heat and cold	44

Appendix

2.1	Some pattern types in reef fish	44
2.2	Colour and pattern in a flatfish, winter flounder	45
2.3	Autonomic control of melanophores in winter flounder	45
	Bibliography	45

3 The skeleton, support and movement 47

3.1	Summary	47
3.2	Introduction	47
3.3	Cartilage and bone	48
3.4	The exoskeleton	50
3.5	The endoskeleton	51
3.5.1	The axial skeleton	51
3.5.2	Vertebrae	52
3.5.3	The skull	54
3.5.4	Jaws and the branchial skeleton	56
3.5.5	The appendicular skeleton	59
3.5.6	Median fin support	62
3.5.7	Fin-ray supports	63
3.5.8	Fin adjustment	63
3.5.9	The adipose fin	63
3.5.10	Caudal fin support	63
3.6	Trends in the fish skeleton	64
3.7	Articulation of the skeleton	64
3.7.1	Joints	64
3.8	Locomotion	65
3.8.1	Skeletal (striated) muscles	65
3.8.2	Types of fish locomotion	67
3.8.3	Fast-start	68
3.8.4	Steering, braking and stabilizers	68
3.8.5	Buoyancy	69
3.8.6	Fish shape and swimming	71
3.8.7	Movement out of water	71

3.1	The hydrostatic skeleton	71
3.2	Histochemical differentiation of cartilage and bone	71
3.3	The origin of bony skeletons: conodonts	72
3.4	Individual bones and their approximate position	72
	Bibliography	74

4 Food procurement and processing 75

4.1	Summary	75
4.2	Introduction	75
4.3	Food and feeding	76
4.3.1	Catching prey	76
4.3.2	Piscivory, prey retention and prey defenses	76
4.3.3	Plankton feeders, microcarnivores and picking and scraping	78
4.3.4	Specialized diets, fin-biters, parasitism and cannibalism	79
4.4	The food-processing system	80
4.4.1	Mouth	80
4.4.2	Jaws	82
4.4.3	Pharyngeal jaws and the tooth-bite apparatus	82
4.4.4	Lips	83
4.4.5	Teeth	83
4.4.6	The gut	86
4.4.7	Digestion and digestive enzymes	90
4.4.8	Absorption	92
4.4.9	Egestion	94
4.5	Feeding periodicity	94
4.6	The control of feeding behaviour	94
4.7	Gut activity and its control	94
4.8	Temperature and feeding	95
4.9	Fish nutrition	95

Appendix

4.1	Nutritional requirements for fish	97
	Bibliography	99

5 Transport: blood and circulation 100

5.1	Summary	100
5.2	Introduction	100
5.3	Overview of the fish vascular system	101
5.4	The basic circulation for gill-breathing fish	101
5.5	The heart	102
5.5.1	Heart valves	102
5.5.2	Septation	103
5.5.3	Cardiac muscle	103
5.5.4	Ventricle wall composition	103
5.5.5	The pacemaker	104
5.5.6	The pericardium	104

5.6	Blood pressure	104
5.7	Venous return	105
5.8	The circulation in air-breathing fish	105
5.9	Portal systems	105
5.10	<i>Retia</i>	106
5.11	The secondary circulation	106
5.12	Change in the circulation	106
5.13	Blood	107
5.13.1	Red blood cells (erythrocytes)	108
5.13.2	White blood cells (leucocytes)	109
5.13.3	Plasma	110
5.13.4	Coagulation	110
5.13.5	Osmotic fragility	111
5.13.6	Blood-cell replenishment, recycling and haematopoiesis	111
5.14	The spleen	111
5.15	The thymus	112
5.16	The immune system	112
5.17	Conclusion	113
<i>Appendix</i>		
5.1	Conventional units for blood system measurements	113
5.2	Blood-sampling techniques	113
Bibliography		114
6	Gas exchange	116
6.1	Summary	116
6.2	Introduction	116
6.3	Major gases exchanged by fish	117
6.4	The gas-exchange surface	117
6.5	Gills	118
6.5.1	Gill filaments: primary and secondary lamellae	118
6.5.2	The pharyngeal clefts	118
6.5.3	Spiracle and pseudobranch	118
6.5.4	Fine structure of the gills	120
6.5.5	Blood supply	121
6.5.6	Countercurrent flow	121
6.5.7	Oxygen gain and carbon dioxide loss	123
6.5.8	Respiratory pigments, haemoglobin and myoglobin	123
6.5.9	Gill area	124
6.5.10	Ventilation mechanisms and control	124
6.5.11	Ram ventilation	125
6.6	Air-breathing fish	126
6.6.1	Lungs	126
6.6.2	The swim bladder used for respiration	126
6.6.3	The gut used for respiration	127
6.6.4	The lips used for respiration	127
6.6.5	The skin used for respiration	127
6.6.6	Facultative and obligate air-breathers	127

6.7 Problems with oxygen and carbon dioxide levels in the aqueous environment	128
6.7.1 Hypoxia and hypercapnia	128
6.7.2 Supersaturation	129
6.7.3 High oxygen demand	129

Appendix

6.1 Oxygen availability	130
Bibliography	130

7 Metabolism, homeostasis and growth **131**

7.1 Summary	131
7.2 Introduction	131
7.3 Fish metabolism	131
7.4 Temperature and metabolism	132
7.5 Homeostasis and relations with the aquatic environment	134
7.5.1 The marine environment	134
7.5.2 The freshwater environment	134
7.5.3 Acid-base regulation	135
7.5.4 The effects of different salinities and osmotic movement of water	135
7.5.5 Fish and osmosis	136
7.5.6 Aquaporins: a route for water movement?	136
7.5.7 Plasma regulation and the erythrocytes	136
7.5.8 Osmoconformers and osmoregulators	137
7.5.9 Osmolytes and counteraction	137
7.5.10 Marine teleosts and osmoregulation	138
7.5.11 The coelacanth's osmotic relations	138
7.5.12 Freshwater fish and osmoregulation	138
7.6 Mechanisms for water and ionic regulation in freshwater fish	138
7.7 Chloride cells	138
7.8 Marine chondrichthyans and ionic regulation	139
7.9 Euryhaline and stenohaline fish	139
7.10 Control of osmoregulation	140
7.11 The liver	140
7.12 Energy storage	142
7.12.1 Carbohydrates	143
7.12.2 Lipids	143
7.12.3 Muscle	143
7.13 Growth	144
7.13.1 The growth potential of individuals	144
7.13.2 Control of growth	146
7.13.3 Growth rate	146
7.13.4 Size measurements	148
7.13.5 Fish ages	148
7.14 Conclusion	149

Appendix

7.1 Buffers	149
7.2 The use of artificial media post-hypophysectomy	149

7.3	Fish salines	150
7.4	Jellied muscle	150
	Bibliography	151
8	Excretion	152
8.1	Summary	152
8.2	Introduction	152
8.3	Pathways for excretion	153
8.3.1	Amino acids	153
8.3.2	Ureotely and ammonotely	153
8.3.3	Creatine	154
8.3.4	Haemoglobin	154
8.3.5	Steroids	155
8.3.6	Water	155
8.3.7	Inorganic ions	155
8.3.8	Particulate materials	155
8.3.9	Metals	155
8.3.10	Xenobiotics	155
8.4	Sites for excretion	156
8.4.1	The gill surface	156
8.4.2	The skin	156
8.4.3	Excretion via the liver, bile and intestine	156
8.4.4	The rectal gland	157
8.4.5	The kidney	157
8.5	The structure and function of the fish kidney	158
8.5.1	Kidney microstructure	158
8.5.2	The nephron	160
8.5.3	Nephron function	162
8.5.4	The aglomerular kidney	163
8.6	Verifying regulation of, and pathways for, excretion	163
8.7	The control/regulation of excretion	164
	Bibliography	164
9	Reproduction	165
9.1	Summary	165
9.2	Introduction	165
9.3	Sexual dimorphism	166
9.4	Hermaphroditism, sex determination and manipulation	166
9.5	The male reproductive system	167
9.5.1	Testis microstructure	170
9.5.2	Spermiation and spawning	170
9.6	The female reproductive system	170
9.6.1	Vivipary, ovovivipary and ovipary	172
9.7	Genital pores	172
9.8	Gametogenesis	173
9.9	Spermatogenesis	173
9.9.1	Different types of spermatogenesis	173

9.9.2	Spermatogonia and mitosis	174
9.9.3	Spermatocytes and meiosis	175
9.9.4	Spermatids and sperm formation: spermiogenesis	176
9.10	Oogenesis	177
9.10.1	Stages of oogenesis	177
9.10.2	Vitellogenesis: yolk formation	178
9.10.3	Layers around developing oocytes	179
9.10.4	The egg membrane or chorion	180
9.10.5	Synchrony or asynchrony in oogenesis	181
9.10.6	Fecundity and atresia	181
9.10.7	Terminal phases of oogenesis	182
9.10.8	Ovulation	183
9.10.9	Egg structure	183
9.11	Fertilization	183
9.12	Egg and larval development	183
9.13	Post-reproduction	184
9.14	Reproductive migrations and reproductive mortality	185
9.15	Spawning and reproductive patterns	186
9.16	Reproductive omission: skipped spawning	186
9.17	Reproductive success	187
9.18	Factors controlling or influencing reproduction	187

Appendix

9.1	Staging systems for fish reproduction	190
9.2	Families with mouth-brooding	191
9.3	Steroids known to be or possibly involved in fish reproduction	191
9.4	The concept of degree days	192
9.5	Fluids for egg treatment	192
9.6	Staining sections with haematoxylin and eosin	192
9.7	Cell division	193
	Bibliography	194

10 Integration and control: hormones

		195
10.1	Summary	195
10.2	Introduction	195
10.3	Hormone nomenclature and classification	196
10.4	The chemical structure of hormones	196
10.5	Hormone candidates	197
10.6	Characteristics of hormone control	197
10.7	Fish hormones in relation to mammalian hormones	198
10.8	Stored and bound hormones, prohormones	198
10.9	Neurosecretion	199
10.10	Interaction of hormones with their targets	199
10.11	Endocrine organs, glands, tissues and cells	199
10.11.1	The pituitary gland and hypothalamus	199
10.11.2	The pineal organ	203
10.11.3	The adrenal gland homologues	204
10.11.4	The thyroid gland	205

10.11.5	The gonads	206
10.11.6	The uropharynx	207
10.11.7	The gut and pancreas	207
10.11.8	Corpuscles of Stannius	208
10.11.9	Ultimobranchial organs, bodies or glands	208
10.12	Endocrine roles in controlling specific functions	208
10.12.1	Hormones and homeostasis	208
10.12.2	Hormones and reproduction	209
10.12.3	Hormones and growth	210
10.12.4	Hormones and digestion	211
10.12.5	Hormones and appetite	211
10.12.6	Hormones and the vascular system	211
10.12.7	Hormones and stress	212
10.12.8	Hormones and colour change	212
10.13	Overview	212

Appendix

10.1	Localization of endocrine cells	213
10.2	Hormone acronyms	215
	Bibliography	215

11 Integration and control: the nervous system 216

11.1	Summary	216
11.2	Introduction	216
11.3	Neural cells	217
11.3.1	Neuroglia	217
11.3.2	Neurons	218
11.3.3	The neuron membrane and conduction	219
11.3.4	Synapses	219
11.3.5	Myelination	220
11.3.6	The neuropil	221
11.4	Antagonistic control	221
11.5	The organization of the fish nervous system	222
11.6	The central nervous system	223
11.6.1	The meninges	223
11.6.2	The organization of the brain	224
11.6.3	The ventricles and cerebro-spinal fluid	227
11.6.4	The blood-brain barrier	227
11.6.5	Brain size and complexity	227
11.6.6	The spinal cord	228
11.6.7	The posterior spinal cord	230
11.7	The peripheral nervous system	230
11.8	The spinal and cranial nerves	230
11.8.1	The terminal nerve (nerve zero)	231
11.9	The autonomic nervous system	232
11.9.1	The spinal autonomic system	234
11.9.2	The cranial autonomic system	234
11.9.3	The enteric autonomic system	235

11.9.4	Neurotransmitters and receptors in the autonomic nervous system	235
11.10	Individual effector control systems	236
11.10.1	The gut	236
11.10.2	Spleen, pancreas and rectal gland	237
11.10.3	Urinogenital system	237
11.10.4	Swim bladder	237
11.10.5	The cardiovascular system	237
11.10.6	Skin colour change	238
11.10.7	Pupillary size changes	238
11.11	Learned behaviour	239
11.12	Overview	239

Appendix

11.1	Excitable membranes	239
11.2	Neural control of muscles	240
	Bibliography	240

12 Perception and sensation

12.1	Summary	241
12.2	Introduction	241
12.3	Photoreceptors: vision	242
12.3.1	The pineal	242
12.3.2	The eyes	243
12.3.3	The eyeball optical system: biocamera	243
12.3.4	Eyeball movement	243
12.3.5	Eyeball structure	243
12.3.6	The iris and pupil	244
12.3.7	Image formation	245
12.3.8	Optical system adaptations to habitat	245
12.3.9	The retina and its neuronal circuitry	246
12.3.10	Retinal photoreceptors: rods and cones	247
12.3.11	Retinal photomechanical activity	247
12.3.12	Retinal specializations	248
12.3.13	Perception of polarized light	248
12.4	Chemoreceptors: taste, smell and internal stimuli	249
12.4.1	Chemosensory cells	249
12.4.2	Taste (gustation)	250
12.4.3	Location and neural connections of taste receptor cells	250
12.4.4	Gustatory stimuli	250
12.4.5	Smell (olfaction)	251
12.4.6	The olfactory system	251
12.4.7	The olfactory bulbs	252
12.4.8	Olfactory stimuli	253
12.5	Mechanoreceptors: introduction	253
12.5.1	Merkel cells	253
12.5.2	Baroreceptors	254
12.5.3	Proprioceptors	254
12.6	Water movement perception and equilibrium systems	255

12.7	The lateral line system: perception of low-frequency vibration	256
12.7.1	Neuromasts and neural connections	256
12.7.2	Neuromast function	257
12.8	The ear: hearing and gravity perception	257
12.8.1	Semicircular canals	258
12.8.2	Otolith organs	258
12.8.3	Semicircular canal and otolith organ functions	258
12.8.4	Direct and indirect sound transmission	259
12.8.5	Hearing in vocally communicating fish	259
12.9	Detecting electric fields and discharges	260
12.9.1	Electrolocation	260
12.9.2	Electroreceptors	261
12.9.3	Types of electroreceptors	261
12.9.4	Electric organ discharge variation	262
12.9.5	Jamming avoidance	262
12.10	Magnetoreceptors	262
12.11	Nociceptors and thermoreceptors	263
12.12	Overview	263
	Bibliography	263
13	Special adaptations	264
13.1	Summary	264
13.2	Introduction	264
13.3	Special adaptations linked to habitat: warm, shallow water	265
13.3.1	Cichlids	265
13.3.2	Characoids	265
13.3.3	Coral reef fish	266
13.4	Special adaptations linked to habitat: cold, deep-water systems	267
13.4.1	Lakes	267
13.4.2	The deep sea	268
13.4.3	Deep-sea taxa	270
13.4.4	Anglerfish	270
13.4.5	Hydrothermal vents and occasional visitors	271
13.4.6	The colour of deep-sea fish	271
13.4.7	Bioluminescence	271
13.5	Limited habitats	273
13.5.1	Cavefish	273
13.5.2	Desert springs	273
13.5.3	Polar fish	274
13.5.4	Temporary pools	274
13.5.5	Terrestrial fish	274
13.5.6	Burrowing	275
13.6	Fish communication	275
13.7	Sound production	275
13.8	Electric fish	276
13.8.1	Bioelectrogenesis	277
13.8.2	How is self-electrocution prevented?	278
13.9	Defence	279

13.10	Special adaptations linked to morphology	279
13.10.1	Fin shapes and modifications	279
13.10.2	Fish shape	280
13.11	Special adaptations: positional	280
13.12	Hermaphroditism and polymorphism	280
13.13	Symbioses	281
13.14	Conclusion	282

Appendix

13.1	Anemone fish and nematocysts	282
	Bibliography	282

14 Fish behaviour 283

14.1	Summary	283
14.2	Introduction	283
14.3	Neural pathways and behaviour	284
14.4	Learning, memory and play	285
14.5	Behaviour centred on movement	287
14.5.1	Motile activity	287
14.5.2	Pelagic fish	287
14.5.3	Feeding	288
14.5.4	Torpor and sleep	288
14.5.5	Territoriality	288
14.5.6	Migration	289
14.6	Social behaviour	289
14.6.1	Fish aggregations	289
14.7	Chemoreception and pheromones in fish behaviour	290
14.8	Reproductive behaviours	291
14.8.1	Mate location	291
14.8.2	Courtship	291
14.8.3	Fertilization	291
14.8.4	Egg transfer	292
14.8.5	Nest-building	292
14.8.6	Parental care	292
14.9	Recognition	293
14.9.1	Kin recognition	293
14.9.2	Interspecific communication: cleanerfish	293
14.10	Innate behaviour	294
14.10.1	Colour, crypsis and mimicry	294
14.10.2	Ventilation	294
14.11	Fish behaviours and humans	294
14.11.1	Do fish experience pain?	295
14.12	Temperature sensitivity	296
14.13	Habitat and behaviour	296
14.14	Overview	296

Appendix

14.1	Neurotransmitters and behaviour	298
	Bibliography	299

15 Obtaining information	300
15.1 Summary	300
15.2 Introduction	300
15.3 Choosing fish to study	301
15.4 Sources of background information	301
15.4.1 Reports	301
15.4.2 Refereed journals	302
15.4.3 Scientific (specialist) meetings	302
15.4.4 Books	302
15.4.5 Language of communication	302
15.5 Species studied	303
15.5.1 Publications	303
15.5.2 Reference works	304
15.6 Type fish	305
15.6.1 Dogfish	305
15.6.2 Sticklebacks	306
15.6.3 Goldfish	306
15.6.4 Zebrafish	307
15.6.5 Salmonids	307
15.6.6 Gadids	307
15.6.7 Perch	307
15.6.8 Flatfish	308
15.7 Fish habitat and availability/suitability for study	308
15.8 Captive fish and sources	308
15.9 Conclusion	308
<i>Appendix</i>	
15.1 Examples of Latin and Greek basics for biological use	309
16 Conservation and fish function	311
16.1 Summary	311
16.2 Introduction	311
16.3 Conservation physiology	312
16.4 Abundance	312
16.5 Extinction	312
16.6 The physiology of pollution	313
16.6.1 Thermal pollution	313
16.6.2 Chemical pollution	313
16.6.3 Eutrophication	314
16.7 Habitat destruction	314
16.8 Rehabilitation	314
16.9 Disease	315
16.10 Fishing	315
16.10.1 The 'wild' fishery	316
16.10.2 Problems with the wild fishery	316
16.10.3 Fish farming versus the wild fishery	316

16.10.4	Shark-fin fishery	317
16.10.5	Non-endemics	317
16.10.6	Catch and post-catch handling	317
16.11	Conservation and the fisheries	317
16.11.1	Marine protected areas (MPAs)	317
16.11.2	Predictability of fish numbers	318
16.12	Responsibility: the tragedy of the commons	319
16.13	The role of physiology in conservation	319
16.13.1	Reproductive capacity	319
16.13.2	Temperature changes	320
16.14	Conclusion	320

Appendix

16.1	Compensation and depensation	321
16.2	Categories of vulnerability	321
16.3	The turbot war	322
